## Notice to Buyers

The Minnesota Crop Improvement Association can assume no financial responsibility for seed or other products listed in this Directory or for disagreements over sales which may arise from this list. However, complaints about certified or quality assured products addressed to the Association will be investigated. Claims over seed performance involving the Minnesota Crop Improvement Association must be addressed as provided in the Minnesota Department of Agriculture Rules for Arbitration of Seed Performance Disputes. Inquiries regarding product availability should be directed to producers and conditioners listed. Buyers should insist on proof of conformance (e.g. attachment of certification labels to bags or being provided with a certificate of conformance) when purchasing certified or quality assured products.

---

# ABOUT MCIA

---

---

## Mission Statement

Minnesota Crop Improvement Association is an organization dedicated to improving the productivity, profitability and competitive position of producers, processors and distributors of agricultural products by providing services to enable them to provide high-quality products to Minnesota, the United States and the World.

## Background

Minnesota Crop Improvement Association (MCIA) provides certification and quality assurance services to a wide array of agricultural and food product producers and handlers through its diverse offering of certification and quality assurance programs. Products certified by MCIA include field crops and turf seed, sod, native plant seeds, noxious weed seed free forage and mulch, identity-preserved grains for specialty grain markets as well as numerous organic crops, livestock and food products. MCIA also provides customized quality assurance services such as field inspections, seed and grain facility evaluations, as well as other third party audit and on-site evaluations. MCIA produces and distributes Foundation seed of publicly developed crop varieties and serves as the marketing agent for licensing varieties developed at the University of Minnesota.

MCIA is a 501(c)(5) not-for-profit association funded by the fees it charges for the services it provides. MCIA operates from its offices on the St. Paul Campus of the University of Minnesota. MCIA serves its over 500 members with 13 full-time employees including three field supervisors located at various locations throughout the state. In addition, MCIA utilizes nearly 40 part-time employees to assist with field inspections and other seasonal work. MCIA is governed by an 11 member Board of Directors elected from its membership.

## The 2011 Board members are:

James Hunzeker, Spring Grove, Chairman  
Duane Dahlman, Cokato, Vice Chairman  
Myron Behm, Atwater, Secretary  
Paul Adams, Wendell, Treasurer

Chad Anvinson, East Grand Forks  
Brent Benike, Baudette  
David Boehm, West Fargo, ND  
Craig Damstrom, Alexandria

Nancy Ehlke, U of MN, St. Paul  
Mary Hanks, St. Paul  
Paul Kjolhaug, Willmar

## History

MCIA has served the agricultural industry in the Upper Midwest for over 100 years. MCIA was founded in 1903 to promote the breeding, growing and distribution of improved field crop varieties developed at the University of Minnesota to crop producers throughout the state. A Directory of members was first published in 1906 and the publication of a list of those with inspected and approved seed began in 1912. In 1955, the Minnesota Seed Law was amended to officially recognize MCIA as the official seed certifying agency of Minnesota. Over the years, MCIA has expanded its programs and related services to meet the needs of its members and the demands of a changing agricultural and food industry. It was formally designated as the official certification agency in Minnesota for noxious weed seed free forage and mulch in 1997 and was accredited as an organic certifier under the National Organic Program in 2002.

As an independent third-party, MCIA strives to provide superior programs and services to meet the needs of today's changing agricultural world.

A coalition of public and private partners.

Farmers Yield Initiative is a coalition of public and private partners with the common goal of protecting the public and the grain industry by supporting plant variety improvement through research, education, certification and PVP enforcement for your benefit.

The purpose of Farmers Yield Initiative is to educate the public and producers about the need for more scientific research during a time of federal and state funding cuts. Congress designed the PVP and other federal laws to encourage both public institutions and private companies to invest in research and recoup that investment through royalties.

States have state seed certification processes to ensure only the highest quality seed is distributed to producers. Certified seed is a strong and reliable indicator of high quality.

The overwhelming majority of all new seed varieties are federally protected and can only be sold as a class of certified seed.

While many producers respect the laws, there are some who seek to gain an unfair advantage over other producers by working outside of the legal system. One way to level the playing field is to anonymously report those who seek to benefit from new varieties without contributing to the substantial research investments that make them possible.

Please consider submitting a strictly confidential tip to help put a stop to illegal seed trade. You need not identify yourself during the phone call. The caller can remain anonymous, and it is toll free: 1-877-482-5907.

## The Benefits of Planting Certified Seed

Every good crop begins with good seed. One of the best ways to ensure that the harvest reaped is of good quality is to invest in certified seed. While the initial investment in certified seed may cost slightly more than bin-run seed, the long-term benefits of planting certified seed pays more by producing a higher yield, a higher quality, and a more disease-resistance crop.

According to research by the U.S. Department of Agriculture, certified seed typically out-yields bin-run varieties by 1.2 to 2.5 bushels per acre. "Growers need to take into account the cost of bin-run seed," says Darrell Hanavan, executive director of the Colorado Wheat Research Foundation. "First, if they weren't saving that seed, they'd be able to sell it for well over \$5 per bushel. Then there are the costs of cleaning, cleanout, labor, storage and interest, which add over a dollar. When you think about \$8 to \$9 per bushel for bin-run seed, then consider the lower germination rate and the yield difference, certified seed simply makes greater economic sense."

By planting certified seed, one can be certain that the seed is pure and that it has been tested for noxious weeds, varietal uniformity and germination. Seed companies guarantee their products, and the seed has been segregated and isolated so that you can be confident in planting and marketing your crop when it is harvested. When you purchase certified seed, you get what you pay for - clean, pure and guaranteed seed. Once that seed is planted and harvested, the end product is safer and healthier for the end-user and consumer.

Also, when planting certified seed, you are making an important investment in the research and development of newer and better varieties of seed. Universities and other seed engineers are constantly investing in and developing newer varieties of seed that continue to increase yields and resist disease, thereby improving the overall benefits associated with certified seed.

## FOUNDATION SEED

### **What is Foundation Seed?**

Foundation seed is the initial generation of seed in the seed certification program. Foundation seed of crop varieties is planted by seed growers to produce Registered and Certified class seed.

### **How is Foundation Seed Produced?**

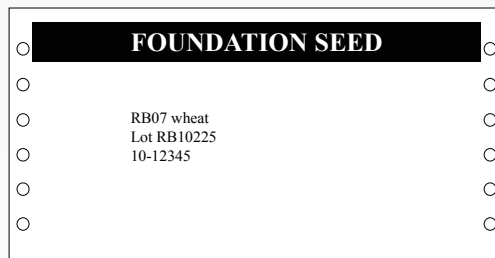

The MCIA Foundation Seed Program operates under an agreement with the University of Minnesota Agricultural Experiment Station to increase, maintain, and distribute Foundation seed of new and established publicly developed varieties. MCIA cooperates closely with the University of Minnesota plant breeding programs in soybeans, wheat, barley, oats and grasses. MCIA also cooperates with similar organizations in neighboring states to supply varieties developed by other public plant breeding programs.

### **Who is Eligible to Purchase Foundation Seed?**

Foundation seed is available to MCIA members who have previous history producing seed in the certification program. Eligible producers are notified of varieties available and procedures for ordering seed.

### **What Should I Look for?**

A Foundation Seed certification label must be attached to each container. For seed sold in bulk, a Bulk Sales Certificate must accompany each load of seed.

*For more information on Foundation Seed Services, call MCIA or visit our website at [www.mncia.org](http://www.mncia.org).*

## VARIETY LICENSING

### **What is Variety Licensing?**

MCIA is the licensing agent for the University of Minnesota. MCIA handles plant materials and varieties of soybeans, wheat, barley, oats and grasses developed by plant breeders at the University.

### **Why are Some Varieties Licensed?**

Crop varieties that are suitable for large scale commercial production are released as public varieties through the traditional foundation seed distribution program. However, many recent releases are food grade or special use varieties that require unique production and handling capabilities or access to specialty markets.

### **Who is Eligible to License Varieties?**

Producers or companies that can demonstrate their capability to successfully produce and commercialize products of the type to be licensed will be considered as licensing partners to the University.

### **How are Varieties Licensed?**

MCIA provides a Material Transfer Agreement (MTA) which allows an individual or company to evaluate the agronomic traits and to assess the potential for commercialization. Parties interested in licensing can submit a proposal for licensing to MCIA. Proposals are reviewed based on criteria established to identify licensing partners most appropriate for the variety being released.

# PLANT VARIETY PROTECTION

---

---

The developer of a new distinct variety may obtain protection for that variety if they choose to do so, provided the variety meets the requirements of the Plant Variety Protection Act (PVPA). A certificate is provided to the developer of a variety which grants exclusive rights for reproducing and marketing the seed. The PVPA is administered by the United States Department of Agriculture.

Many of the varieties listed in this publication have either a Certificate of Plant Variety Protection (PVP) issued to them or an application has been made for Plant Variety Protection. PVP - Title V specifies seed be sold by variety name only as a class of certified seed. If a variety is not protected with the Title V option, the owner of the variety still has the exclusive right to determine who can produce and market the variety as a seed product.

A majority of the varieties are now protected under the 1994 amendment of the Plant Variety Protection Act. For PVP 94 protected varieties, you may save seed for your own planting only; you may not sell it to a neighbor without specific permission of the applicant for protection.

Varieties listed on the following page were commonly grown in Minnesota in the last two years. Additions or deletions may occur at any time. It is the responsibility of the buyer and seller to confirm the PVP status of a crop variety before buying or selling a specific variety. It is illegal for anyone to purchase "grain" of a protected variety and utilize it for planting purposes.

This is not an all inclusive list. There are many varieties not listed that are protected by PVP. Call MCIA if you are unsure of a variety's PVP status or check the status on the internet at [www.ars-grin.gov/cgi-bin/npgs/html/pvplist.pl](http://www.ars-grin.gov/cgi-bin/npgs/html/pvplist.pl).

Listed below are types of protections and their coordinating PVP statements.

## CERTIFIED SEED

### What is Seed Certification?

Seed certification is an internationally recognized system to preserve the genetic identity and purity of crop varieties.

### How is Seed Certified?

Seed certification requires planting eligible seedstocks, field inspection of the growing crop, proper conditioning, representative sampling, thorough laboratory analysis, and proper labeling.

### Who Produces Certified Seed?

Certified seed is produced by careful, conscientious growers, according to seed certification standards. Seed certification standards and procedures are available from MCIA.

### Why buy Certified Seed?

Seed certification procedures provide the best possible third party assurance of good quality seed of known identity and purity.

### What Should I Look for?

For certification to be valid, buyers must be provided proof of certification. Seed containers must bear an official certification label. Bulk seed sales must be accompanied by a Bulk Seed Sales Certificate.

**Quest** - A six-rowed malting barley with improved Fusarium head blight resistance and lower mycotoxin (DON) levels. Quest has a semi-smooth awn, white aleurone and long rachilla hair. It is about the same height as Robust, but taller than Lacey with yield and grain protein levels similar to Tradition and Lacey. Selected by AMBA as a recommended malting variety in December 2010. Released by Minnesota Agricultural Experiment Station in 2010. License required for seed production. PVP(94) Title V is applied for.

<b>Kittson County</b>			
Johnson Farms, Inc., Lloyd, Karlstad .....	218-436-2817	85

Total Acres, Quest		260	

**Rasmusson** - High yielding variety with improved malting quality characteristics. It is six-row, semi-smooth awn, white aleurone variety with good kernel plumpness. Rasmusson is shorter than most current six-rowed malting varieties in the Midwest. It has performed well in Minnesota and North Dakota yield trials. It has good lodging resistance: resistance to spot blotch and is similar to Robust for scab reaction. Rasmusson is an AMBA recommended malting barley variety. Released by the Minnesota Agricultural Experiment Station in 2008. License required for seed production. PVP(94) Title V.

## BIG BLUESTEM

NAME, CITY	PHONE NUMBER	ACREAGE	
		Reg	Cert
<b>Bison</b> - Early maturity, well-adapted to northern climates. Uniform plant type, grows 3 to 6 feet tall. Good leafiness, high plant vigor and seed yield, high in forage quality. No Registered class. Released by North Dakota and Minnesota Agricultural Experiment Stations and USDA-ARS/USDA-SCS in 1989.			
<b>Kittson County</b>			
Carlson Prairie Seed Farm, Inc., Lake Bronson.....	218-754-2693		
<b>Bonilla</b> - Superior winter hardiness, persistence and seed production ability. Use includes range and pasture seedings, wildlife habitat, natural areas, surface mine revegetation and critical area seedings. Released by North Dakota, South Dakota and Minnesota Agricultural Experiment Stations and USDA-ARS/USDA-SCS in 1987.			
<b>Cottonwood County</b>			
Iverson, Glen, Lamberton .....	507-445-3388	25	

Total Acres, Bonilla 25

**Sunnyview** - Derived from materials collected in Union County, SD. Two cycles of phenotype selection for vigor, leafiness, spikelet fertility and seed yield were used. A unique characteristic of this variety is the high percentage of plants with some degree of hermaphroditism (florets containing both male and female reproductive parts) which may account for its improved seed yield. Released cooperatively by the South Dakota Agricultural Experiment Station and the USDA/NRCS Plant Materials Center in 1992.

<b>Renville County</b>			
Branick, Kevin, Sioux Falls .....	605-332-3732	8

**Buckskin** - A medium maturity oat variety adapted to the Midwest. This variety has high yield potential combined with good test weight and tan kernel color. It is two days later and about the same height as Esker. Buckskin has good barley yellow dwarf virus tolerance and crown rust resistance, but is moderately susceptible to loose smut. Released by the Illinois Agricultural Experiment Station. No Registered seed class. License required for seed production. PVP(94) Title V.

<b>Todd County</b>			
Faust, Kevin, Long Prairie.....	320-732-3361	47	
Total Acres, Buckskin		47	

**Colt** - An early maturing variety, heading 1-2 days earlier than Kame with good yield potential. Colt is a white oat with high test weight superior to Kame and Stallion. It is medium short with good lodging resistance. Crown rust rating for Colt is better than Kame with a comparable rating for barley yellow dwarf virus. Released in 2009 by the South Dakota Agricultural Experiment Station. License required for seed production. PVP (94) Title V is applied for.

## SPRING WHEAT

NAME, CITY	PHONE NUMBER	ACREAGE	
		Reg	Cert

**Breaker** - Hard red spring wheat that can achieve high yield of high test weight and medium protein grain in the Northern Great Plains. Breaker is an awned, medium maturing, semi-dwarf variety that has shown a resistant reaction to stem rust and a moderately resistant to moderately susceptible reaction to leaf rust and foliar disease and Fusarium head blight. Developed by WestBred LLC. PVP (94).

**Marshall County**

**Polk County**

AgriMAX, Fisher.....	218-891-2211
----------------------	--------------

**Brennan** - A hard red spring wheat bred and developed by AgriPro of Syngenta Seeds, Inc. It has medium-early maturity and very good test weight. It is a short semi-dwarf type with very strong straw strength. It is moderately resistant to the prevalent races of leaf rust. Foliar disease protection is very good. Brennan has intermediate tolerance to scab. Protein is intermediate and overall breadmaking characteristics are satisfactory. Brennan is broadly adapted to the spring wheat growing areas of North and South Dakota, Minnesota and Montana. Released in 2009. PVP(94) Title V.

-----------------------------------	--------------

**Brick** - A hard red spring wheat. The name Brick represents its dark red color and heavy test weight. Brick is extremely early, maturing two days earlier than Briggs and is similar in height with medium straw strength. Brick has good scab tolerance, the source of Fusarium head blight resistance is the Chinese parent, Sumai 3. Leaf rust resistance is rated as moderately resistant. Brick has high test weight and good protein. Released by the South Dakota Agricultural Experiment Station in 2009. License required for seed production. PVP(94) Title V.

**Briggs** - Early, semi-dwarf, hard red spring wheat. Resistant to prevalent races of leaf and stem rust, moderately resistant to leaf spotting and intermediate for scab resistance. Dough of Briggs tends to be weak to mellow, but baking data indicates good loaf volume and internal characteristics. Released by South Dakota Agricultural Experiment Station in 2002. PVP(94) Title V.

**Polk County**

Fosston Tri-Coop, Fosston.....	218-435-6919	201
--------------------------------	--------------	-----

Total Acres, Briggs 201

**Edge** - A medium height, medium early maturity, semi-dwarf hard red spring wheat with good standability. It is susceptible to the prevalent races of leaf rust, foliar disease and scab. Edge has medium-high protein levels and medium test weight. Bread-making characteristics are very good and yield potential is very high. Edge is a management wheat requiring fungicide for control of almost all the common wheat diseases. Released by Monsanto Technology, LLC in 2010. PVP (94)

**Howard** - Medium early, semi-dwarf hard red spring wheat with good straw strength. It is has a moderate reaction to scab similar to Steele-ND and is resistant to leaf and stem rust. It has good resistance to other leaf diseases. Howard has good test weight with good milling and baking qualities. Released by the North Dakota Agricultural Experiment Station in 2006. License required for seed production. PVP(94) Title V.

**Swift County**

Falk's Seed Farm, Murdock .....	320-875-4341	16	73
Total Acres, Howard		89	

**Jenna** - A hard red spring wheat bred and developed by AgriPro of Syngenta Seeds, Inc. It has medium-late maturity and very good test weight. It has standard semi-dwarf height and very strong straw strength. It is moderately resistant to the prevalent races of leaf rust. Foliar disease protection is very good. Jenna has intermediate tolerance to scab. Protein is intermediate and overall breadmaking characteristics are satisfactory. Jenna is broadly adapted to the spring wheat growing areas of North and South Dakota, Minnesota and Montana. Released in 2009. PVP(94) Title V.

Kukowski, Jim, Strathcona ..... 218-781-2478

**Kelby** - A semi-dwarf variety with very good straw strength, early maturity and very good test weight. It is resistant to stem rust and moderately resistant to leaf rust. Kelby has very good protection to other leaf spotting diseases such as tan spot and septoria. It has intermediate tolerance to scab. Kelby is broadly adapted to the northern plains. Released by AgriPro in 2006. PVP(94) Title V.

**Clay County**

Petermann Seeds, Inc., Hawley ..... 218-483-3302

**Roseau County**

Kukowski, Jim, Strathcona ..... 218-781-2478

**Knudson** - Medium-early maturing variety with very good test weight. It is a tall semi-dwarf with moderately strong straw. Knudson is resistant to stem rust and moderately resistant to leaf rust. It has excellent protection against foliar diseases such as tan spot and septoria. Scab tolerance is intermediate. It has intermediate protein levels and satisfactory breadmaking characteristics. Knudson is adapted to all areas of the northern plains. Released by AgriPro Seeds in 2002. PVP(94) Title V.

**Renville County**

Finish Line Seed, Inc., Bird Island ..... 320-365-3674

**Kuntz** - Medium maturity and very good test weight. It has standard semi-dwarf height and very strong straw strength. It is moderately resistant to the prevalent races of leaf rust. Foliar disease protection is very good. Kuntz has intermediate tolerance to scab. Protein is medium-low and overall breadmaking characteristics are satisfactory. Kuntz is broadly adapted to the spring wheat growing areas of North and South Dakota, Minnesota and Montana. Released by AgriPro in 2007. PVP(94) Title V.

**Lincoln County**

Ivanhoe Seed & Feed, Ivanhoe ..... 507-694-1243

**Oklee** - An early semi-dwarf with high yield potential. Heading date similar to Walworth and Briggs, it has yielded well in both northern and southern test locations. Test weight and protein percent have been above average. It has a moderate reaction to Fusarium head blight and is resistant to stem rust and moderately resistant to leaf rust and other leaf diseases. It has good lodging resistance. Released by the Minnesota Agricultural Experiment Station. License required for seed production. PVP(94) Title V.

**Rollag** - A unique combination of highest available resistance to Fusarium head blight (scab) and strong straw. The scab rating for Rollag is equal to Glenn and Brick but Rollag has better yield. Developed at the University of Minnesota, the pedigree of Rollag includes Ada and a scab resistant Canadian line. It is a medium maturity variety with above average protein and test weight. It is comparable to Barlow for yield but has much better straw strength. It is resistant to stem rust, with moderate resistance to leaf rust and moderate resistance to other leaf diseases. Released by the Minnesota Agricultural Experiment Station in 2011. License required for seed production. PVP(94) Title V is contemplated.

<b>Sabin</b> - Medium maturity hard red spring wheat with good scab tolerance. In testing, Sabin has consistently been above average in grain yield with good test weight and protein. The heading date of Sabin is similar to Freyr. It is average in height with medium straw strength. Sabin has the Sumai 3 source for scab resistance rating of 4 (on 1-9 scale), similar to Faller and Freyr. It is resistant to stem rust, with moderate resistance to leaf rust and moderate resistance to other leaf diseases. Released by the Minnesota Agricultural Experiment Station in 2009. License required for seed production. PVP(94) Title V.

**Tom** - A mid-maturity hard red spring wheat with good scab tolerance. Tom has yielded very well in the Northern Red River Valley with good test weight and protein. The heading date of Tom is similar to Freyr. It is average in height with medium straw strength. Tom has moderate resistance to scab, similar to Freyr. It is resistant to stem rust and the Ug99 race of stem rust. It is moderately resistant to prevalent races of leaf rust and other leaf diseases. Tom is resistant to pre-harvest sprouting with good falling numbers. Released by the Minnesota Agricultural Experiment Station in 2008. License required for seed production. PVP(94) Title V.

**Polk County**

Peterson, Inc., D.W., Warren..... 218-745-4507 180

Total Acres, Tom 180

**Vantage** - A good standing, medium-late maturing hard red spring wheat that can achieve high yield of high test weight and high protein grain. Vantage is resistant to stem rust and moderately resistant to moderately susceptible to leaf rust and foliar disease (tan spot and Septoria tritici). Vantage has a moderately susceptible reaction to Fusarium head blight. Quality of Vantage is good based on test weight, protein, and flour SDS sedimentation values (a measure of gluten strength). Developed by WestBred LLC. Released in 2006. PVP (94).

Total Acres, Arapahoe 134

**Boomer** - A hard red winter wheat for the dryland areas of North Dakota, South Dakota and Minnesota. Boomer was selected for very good leaf rust resistance and is moderately susceptible to Septoria tritici and tan spot. Boomer has medium maturity, is semi-dwarf and hollow-stemmed. Released by Westbred, LLC in 2009. PVP (94).

**Marshall County**

Jensen Farms, Stephen ..... 218-478-3398

**Expedition** - Hard red winter wheat, awne, white-chaffed, early maturing, semi-dwarf. Plant height is short, winter hardiness is rated good-excellent. Straw strength is fair. Is rated resistant to prevalent races of stem rust, however, is moderately susceptible to leaf rust. Exhibits some tolerance to head scab but is susceptible to tan spot and Hessian fly and had an intermediate reaction to soil-borne mosaic virus. End-use characteristics are rated acceptable overall. Released by South Dakota Agricultural Experiment Station in 2003. PVP(94) Title V.

**Le Sueur County**

Stangler Farm Seed, Dick, Kilkenny..... 507-595-2883 12 130

Total Acres, Expedition 142

**Jerry** - Hard red winter wheat consistently among top yielding group of varieties. Percent protein superior to Seward & Ransom. Good test weight, excellent lodging resistance and good winter survival. Released by North Dakota Agricultural Extension Service in 2002.

**Marshall County**

Jensen Farms, Stephen ..... 218-478-3398 75

## QUALITY ASSURED SEED

### What is Quality Assured Seed?

Quality Assured (QA) seed has met standards designed to preserve the purity and identity of a crop variety. Standards, similar to seed certification, enable a company to produce and market seed according to sound quality management practices.

### How is Seed Quality Assured?

The quality assurance process includes field inspections, laboratory testing, audits of production records, and on-site evaluations of conditioning and treatment facilities. Seed meeting all requirements is eligible to be labeled with the AOSCA QA logo.

### Who Produces Quality Assured Seed?

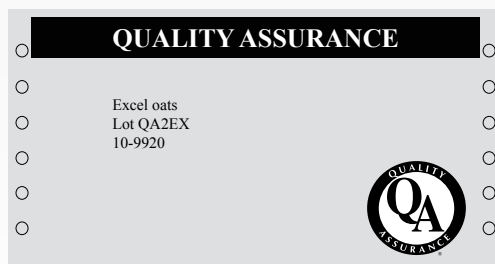

Seed producers of all crop types may utilize a QA program to access a complete service for seed sold as varieties, hybrids, brands or blends. QA programs can be customized to support an existing quality management system or as part of an AOSCA program.

### Why buy Quality Assured Seed?

Quality Assured seed provides assurance to seed buyers that the seed is of known purity and quality as verified by an unbiased third-party.

### What Should I Look for?

Seed meeting QA standards may bear a Quality Assurance label or be marked with a QA logo. Buyers of bulk quality assured seed may be provided with a QA Bulk Sales Certificate.

*For more information on Quality Assured Seed, call MCIA or visit our website at [www.mncia.org](http://www.mncia.org).*

## OATS

NAME, CITY PHONE NUMBER

**Excel** - Medium early maturity, high yielding, medium height and strong straw strength. Ivory yellow seed, with good test weight and groat percentage. Excel is moderately susceptible to crown rust and loose smut. It has good tolerance to yellow dwarf viruses and is susceptible to stem rust. Selected at Purdue Agricultural Experiment Station and released in 2007. License required for seed production.

**Freeborn County**  
Albert Lea Seed House, Inc, Albert Lea ..... 507-373-3161

**Mower County**  
Grass & Sons Seed, Inc., LeRoy ..... 507-324-5820

**Wabasha County**  
Zabel Seeds, Plainview ..... 507-534-2498

**Rockford** - A high yielding variety that offers very good lodging resistance. Rockford possesses crown rust and stem rust resistance, is moderately susceptible to stem rust race NA67, and is tolerant to barley yellow dwarf virus. License required through North Dakota Crop Improvement Association for production and distribution. PVP (94).

**Polk County**  
Fosston Tri-Coop, Fosston ..... 218-435-6919

**Rice County**  
Werner Farm Seeds, Dundas ..... 507-645-7995

**Swift County**  
Falk's Seed Farm, Murdock ..... 320-875-4341

**Souris** - Medium-tall, medium maturity. High yielding, white-hulled cultivar with test weights consistently high enough for premium oat markets. Souris will grow under high moisture and fertility conditions. It has a new source of resistance to prevalent races of crown rust. License required through North Dakota Crop Improvement Association for production and distribution. PVP (94).

**Brown County**  
Lakeside Seeds, Hanska ..... 507-794-7698

**Polk County**

## APPROVED FACILITY PROGRAM

### What is the Approved Facility Program?

MCIA's Approved Facility Program provides an evaluation and approval process for facilities processing and selling seed and identity-preserved (IP) grain products. Facilities processing and/or handling products sold under the seed certification, QA seed and IP grain programs must be inspected and approved by MCIA.

### How is a Facility Approved?

To be approved, facilities must meet requirements appropriate for the seed or grain to be processed. Approval is granted on an annual basis for conditioning and handling specific seed types or for processing grain products for specified end uses.

### Why Utilize an Approved Facility?

Approved facilities are inspected on a regular basis to determine on-going conformance to requirements necessary to preserve the product identity and quality and adequately process products.

### What Should I Look For?

Approved facilities are issued Certificates of Approval annually which are to be prominently posted in their place of business. MCIA also provides Approved Facility signs.

*For more information on Approved Facilities, call MCIA or visit our website at [www.mncia.org](http://www.mncia.org).*

# Certified Seed Doesn't Cost...

# It Pays!

## ▲ PROVEN QUALITY

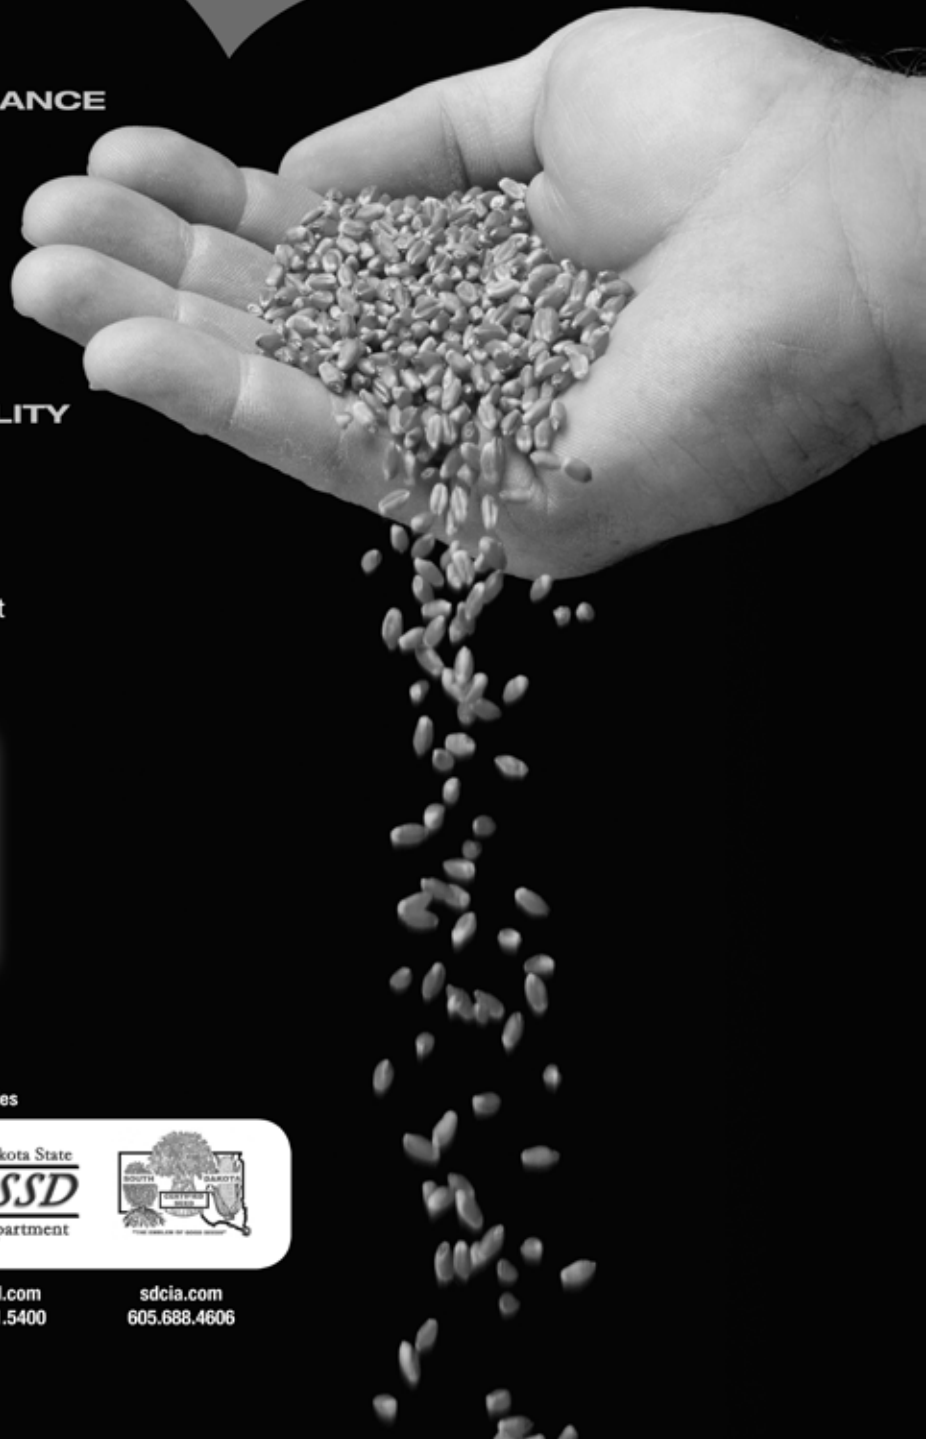

- High germination
- Fewer weed seeds
- Less inert matter
- Less seed-borne disease
- Known varieties

## ▲ SUPERIOR PERFORMANCE

- Better plantability
- Rapid stand establishment
- More uniform maturity
- Easier harvest
- Less dockage

## ▲ GREATER PROFITABILITY

- Newest genetics
- Less weed control costs
- Less disease control costs
- Greater yield per acre
- More return on your investment

## NATIVE SEED CERTIFICATION

### What is Native Seed Certification?

Native plants are often used for re-vegetation of roadsides, construction sites, wildlife plantings and other projects. MCIA’s Native Seed Certification Program verifies that the genetic identity of native grasses and forbs (wildflowers) has been maintained through all phases of seed production.

### How is Native Seed Certified?

The certification process consists of several steps which include seed source verification, inspection of seed production sites and seed testing. MCIA issues seed labels or certificates to producers whose production has met all certification standards.

### Who Produces Native Certified Seed?

Native seed is produced by careful, conscientious growers according to certification standards designed to preserve the genetic identity of native plant species. MCIA surveys producers in the fall and spring to determine availability. The survey results are posted on the MCIA website at [www.mncia.org](http://www.mncia.org).

### Why Buy Certified Native Seed?

Certified native seed provides seed buyers with third party assurance that the genetic identity or source of native grasses and forbs is accurately described on the label.

### What Should I Look For?

Three different germplasm types are possible based on the amount of intentional selection that has taken place. They are:

**Source Identified**, marked with a yellow certification tag.

**Selected** marked with a green certification tag.

**Tested**, marked with a blue certification tag.

Alternatively, a Certification Certificate may be provided as proof of certification to buyers of certified native seed.

Enhancing Value, Improving Marketability

# NOXIOUS WEED SEED FREE FORAGE AND MULCH

## What is Noxious Weed Seed Free Forage and Mulch?

This certification program for forage (hay, cubes and pellets) and mulch is designed to limit the spread of noxious weeds. MCIA is designated under Minnesota Law as the official Noxious Weed Seed Free Forage and Mulch Certification Agency in Minnesota. The MCIA program conforms to standards developed by the North American Weed Management Association (NAWMA) which allow properly labeled forage and mulch certified by MCIA to be shipped into restricted areas of the United States and Canada.

## How is Noxious Weed Seed Free Forage and Mulch Certified?

Certification requires fields and storage locations to be inspected by MCIA prior to harvest. Labels with unique serial numbers are issued for forage and mulch production meeting certification standards.

## Who Produces Certified Noxious Weed Seed Free Forage and Mulch?

It is produced by conscientious growers who are able to produce forage and mulch that meets program standards. MCIA surveys producers in the fall and spring to determine availability. The survey results are posted on the MCIA website at [www.mncia.org](http://www.mncia.org).

## Why Buy Certified Noxious Weed Seed Free Forage and Mulch?

Buyers are provided assurance that forage and mulch certified through this program is free of noxious weed seeds or other propagating parts. In Minnesota, certified mulch is often required for highway roadside plantings and other re-vegetation projects. Many public lands in the western United States require that hay transported into these areas be certified noxious weed free.

## What Should I Look For?

For certification to be valid, an official certification label must be attached to each bale of forage or mulch.

For more information on Forage & Mulch, call MCIA or visit our website at [www.mncia.org](http://www.mncia.org).

## QUALITY ASSURED SOD

### What is Quality Assured Sod?

The Sod Quality Assurance Program establishes high quality standards for the production and on-going improvement of sod types suitable for installing in challenging environments. The program is a collaborative effort of the Minnesota Turf Association, the University of Minnesota, the Minnesota Department of Transportation (Mn/DOT) and the Minnesota Crop Improvement Association (MCIA).

### How is Sod Quality Assured?

To be Quality Assured, sod must meet specific standards including utilizing approved seed mixes, meeting field requirements and maintaining required documentation. The program provides third party assurance to end users to ensure that sod meets specifications and was produced according to rigorous production standards.

### Who Produces Quality Assured Sod?

Quality Assured sod is produced by careful, conscientious sod producers who utilize approved seed mixtures and required sod production practices to meet program standards.

### Why Utilize Quality Assured Sod?

The first sod type available is salt tolerant sod suitable for use along streets, parking areas and roadsides where saline soil conditions frequently occur. This sod type has been approved by Mn/DOT and will be required where Mn/DOT projects specify salt or shade tolerant sod. It is anticipated that sod products developed through this program will continually evolve and improve as better suited turf seed varieties become available and are utilized to produce sod.

### What Should I Look for?

A Sod Quality Assurance Certificate must accompany each sod delivery as proof of conformance to program standards.

For more information on Sod Quality Assurance, call MCIA or visit our website at [www.mncia.org](http://www.mncia.org).

## QUALITY ASSURED SOD GROWERS

This listing is current as of September 15, 2011. For the most current list, visit our website at [www.mncia.org](http://www.mncia.org).

### *Insist on this certificate for assurance of Salt Tolerant Sod*

- Grown from premium quality seed
  - ♦ Selected turf grass varieties
  - ♦ Quality assured seed mixes from approved vendors
- Comprehensive sod production standards
  - ♦ Professionally grown by qualified producers
  - ♦ Stringent sod quality requirements
- Rigorous third party quality assurance process
  - ♦ Seed to harvest oversight
  - ♦ On-site inspections
- Certificate of Assurance with each delivery
  - ♦ Identifies sod that has met all requirements

Program proceeds help fund University of Minnesota research to improve turf and sod performance.

## SOD QUALITY ASSURANCE PROGRAM

## **ORGANIC CERTIFICATION SERVICES**

### **Where Does MCIA get its Authority?**

MCIA is an Accredited Certifying Agent (ACA) authorized by the USDA National Organic Program (NOP). MCIA is authorized to provide organic certification services to producers, handlers and processors.

### **What is Organic Certification?**

Certification is the process whereby a producer or handler is approved by an ACA as being in compliance with the NOP regulations and is then authorized to sell, label, or represent products as being "Certified Organic".

### **Who Uses MCIA Organic Certification Services?**

Operations certified by MCIA include food processors, distributors, retailers, agricultural handling facilities, wild crop collectors, livestock producers and field crop, vegetable and fruit producers.

### **Why Use MCIA as your Organic Certifier?**

MCIA provides its clients with a user-friendly, efficient, cost-effective certification process. MCIA's service-oriented staff is available to provide prompt, professional assistance to help organic producers and handlers understand organic program requirements and guide them through the organic certification process.

### **How Do You Complete Organic Certification?**

The Certification process requires an application, inspection and review to determine if a producer or handler is in compliance with the NOP regulations. Upon completion of the process the operation is then authorized to sell, label, or represent products as being "Certified Organic". All operations must apply and be inspected annually.

*For more information on Organic Certification Services, call MCIA or visit our website at [www.mncia.org](http://www.mncia.org).*

---

---

## ORGANIC SEED USE

---

---

There are often questions regarding the requirement for the use of organic seed and other planting stocks in organic production systems. NOP §205.204 states that an organic “producer must use organically grown seeds, annual seedlings, and planting stock, Except, That, (1) Nonorganically produced, untreated seeds and planting stock may be used to produce an organic crop when an equivalent organically produced variety is not commercially available,” and “(4) Nonorganically produced planting stock to be used to produce a perennial crop may be sold, labeled, or represented as organically produced only after the planting stock has been maintained under a system of organic management for a period of no less than 1 year.”

Most certifiers require organic producers to conduct thorough and diligent searches for organic seed before authorizing the use of non-organic seed. Consult the list of producers in this directory to locate seed and to identify seed conditioners that have been certified to process organic seed. However, not all sources of organic seed are listed and it must be understood that seed availability changes throughout the season. Call MCIA if you need assistance in locating organic seed.

It is important to remember that producing high quality seed (whether conventional or organic) requires planning, use of effective production practices and proper handling and conditioning methods. MCIA provides certification, quality assurance and other services for seed producers and conditioners and can provide assistance to those interested in getting started in organic seed production. Contact MCIA for information on seed production practices and requirements. MCIA’s website ([www.mncia.org](http://www.mncia.org)) contains information on MCIA programs and services available to seed producers.

Those wishing to offer organic seed for sale must understand and meet Federal and State seed law labeling and other requirements pertaining to seed in addition to the organic requirements. For information about selling seed in Minnesota, please refer to the following Minnesota Department of Agriculture website: <http://www.mda.state.mn.us/licensing/licensetypes/fmsr.asp>
