Every company has test acreage. We have proving ground.

AgriPro® brand varieties from Syngenta are locally adapted for greater performance where it counts. North America's largest wheat breeding program develops AgriPro brand varieties that resist disease while maximizing grain yield and quality. Innovation in the lab combined with thousands of research trials provide farmers a superior seed resource backed by the strength of Syngenta.

SY Soren—Maximum return per acre

Jenna—The Yielder with Protein

Brennan—Balanced With High Yield and Protein

Kelby—High Protein and Complete Agronomics

SY Wolf—The new top performing winter wheat

Prove it on your own acres. Available as certified seed grown and distributed by local AgriPro associates. For more information on AgriPro wheat varieties, contact your local AgriPro associate, call 866-943-5327 (866-Yield-AP) or visit AgriProwheat.com.

Notice to Buyers

The Minnesota Crop Improvement Association can assume no financial responsibility for seed or other products listed in this Directory or for disagreements over sales which may arise from this list. However, complaints about certified or quality assured products addressed to the Association will be investigated. Claims over seed performance involving the Minnesota Crop Improvement Association must be addressed as provided in the Minnesota Department of Agriculture Rules for Arbitration of Seed Performance Disputes. Inquiries regarding product availability should be directed to producers and conditioners listed. Buyers should insist on proof of conformance (e.g. attachment of certification labels to bags or being provided with a certificate of conformance) when purchasing certified or quality assured products.

ABOUT MCIA

Mission Statement

Minnesota Crop Improvement Association is an organization dedicated to improving the productivity, profitability and competitive position of producers, processors and distributors of agricultural products by providing services to enable them to provide high-quality products to Minnesota, the United States and the World.

Background

Minnesota Crop Improvement Association (MCIA) provides a diverse offering of certification and quality assurance services to a wide array of agricultural and food product producers and handlers. Products certified by MCIA include field crops and turf seed, sod, native plant seeds, noxious weed seed free forage and mulch, identity-preserved grains for specialty grain markets as well as numerous organic crops, livestock and food products. MCIA also provides customized quality assurance services such as field inspections, seed and grain facility evaluations, as well as other third party audit and on-site evaluations. MCIA produces and distributes Foundation seed of publicly developed crop varieties and serves as the marketing agent for licensing varieties developed at the University of Minnesota.

MCIA is a 501(c)(5) not-for-profit association funded by the fees it charges for the services it provides. MCIA operates from its offices on the St. Paul Campus of the University of Minnesota. MCIA serves its over 500 members with 13 full-time employees including three field supervisors located at various locations throughout the state. In addition, MCIA utilizes nearly 40 part-time employees to assist with field inspections and other seasonal work. MCIA is governed by an 11 member Board of Directors elected from its membership.

The 2012 Board members are:

Duane Dahlman, Cokato, Chairman

David Boehm, West Fargo, ND, Vice Chairman

Neal Anderson, St. Peter, Secretary

Paul Adams, Wendell, Treasurer

Chad Anvinson, East Grand Forks

Brent Benike, Baudette

Craig Damstrom, Alexandria

Nancy Jo Ehlke, U of MN, St. Paul

Paul Kjolhaug, Willmar

Jay Miller, Shakopee

Mike Zabel, Plainview

History

MCIA has served the agricultural industry in the Upper Midwest for over 100 years. MCIA was founded in 1903 to promote the breeding, growing and distribution of improved field crop varieties developed at the University of Minnesota to crop producers throughout the state. A Directory of members was first published in 1906 and the publication of a list of those with inspected and approved seed began in 1912. In 1955, the Minnesota Seed Law was amended to officially recognize MCIA as the official seed certifying agency of Minnesota. Over the years, MCIA has expanded its programs and related services to meet the needs of its members and the demands of a changing agricultural and food industry. It was formally designated as the official certification agency in Minnesota for noxious weed seed free forage and mulch in 1997 and was accredited as an organic certifier under the National Organic Program in 2002.

As an independent third-party, MCIA strives to provide superior programs and services to meet the needs of today's changing agricultural world.

FOUNDATION SEED

What is Foundation Seed?

Foundation seed is the initial generation of seed in the seed certification program. Foundation seed of crop varieties is planted by seed growers to produce Registered and Certified class seed.

How is Foundation Seed Produced?

The MCIA Foundation Seed Program operates under an agreement with the University of Minnesota Agricultural Experiment Station to increase, maintain, and distribute Foundation seed of new and established publicly developed varieties. MCIA cooperates closely with the University of Minnesota plant breeding programs in soybeans, wheat, barley, oats and grasses. MCIA also cooperates with similar organizations in neighboring states to supply varieties developed by other public plant breeding programs.

Who is Eligible to Purchase Foundation Seed?

Foundation seed is available to MCIA members who have previous history producing seed in the certification program. Eligible producers are notified of varieties available and procedures for ordering seed.

What Should I Look for?

A Foundation Seed certification label must be attached to each container. For seed sold in bulk, a Bulk Sales Certificate must accompany each load of seed.

Contact MCIA for a list of available varieties or to buy Foundation Seed.

VARIETY LICENSING

What is Variety Licensing?

Minnesota Crop Improvement Association (MCIA) is the licensing agent for agronomic crops developed at the University of Minnesota. Plant breeders at the University continue to develop new varieties of soybeans, wheat, barley, oats and grasses. MCIA serves as the primary point of contact for producers and processors interested in new Minnesota varieties.

Why are Some Varieties Licensed?

Crop varieties that are suitable for large scale commercial production are released as public varieties through the traditional foundation seed distribution program. However, many recent releases are food grade or special use varieties that require unique production and handling capabilities or access to specialty markets.

Who is Eligible to License Varieties?

Producers or companies that can demonstrate their capability to successfully produce and commercialize products of the type to be licensed will be considered as licensing partners to the University.

How are Varieties Licensed?

MCIA provides a Material Transfer Agreement (MTA) which allows an individual or company to evaluate the agronomic traits and to assess the potential for commercialization. Parties interested in licensing can submit a proposal for licensing to MCIA. Proposals are reviewed based on criteria established to identify licensing partners most appropriate for the variety being released.

For more information, call MCIA or visit our website at www.mncia.org.

PLANT VARIETY PROTECTION

The developer of a new distinct variety may obtain protection for that variety if they choose to do so, provided the variety meets the requirements of the Plant Variety Protection Act (PVPA). A certificate is provided to the developer of a variety which grants exclusive rights for reproducing and marketing the seed. The PVPA is administered by the United States Department of Agriculture.

Many of the varieties listed in this publication have either a Certificate of Plant Variety Protection (PVP) issued to them or an application has been made for Plant Variety Protection. PVP - Title V specifies seed be sold by variety name only as a class of certified seed. If a variety is not protected with the Title V option, the owner of the variety still has the exclusive right to determine who can produce and market the variety as a seed product.

A majority of the varieties are now protected under the 1994 amendment of the Plant Variety Protection Act. For PVP 94 protected varieties, you may save seed for your own planting only; you may not sell it to a neighbor without specific permission of the applicant for protection.

Varieties listed on the following page were commonly grown in Minnesota in the last few years. Additions or deletions may occur at any time. It is the responsibility of the buyer and seller to confirm the PVP status of a crop variety before buying or selling a specific variety. It is illegal for anyone to purchase "grain" of a protected variety and utilize it for planting purposes.

This is not an all inclusive list. There are many varieties not listed that are protected by PVP. Call MCIA if you are unsure of a variety's PVP status or check the status on the internet at www.ars-grin.gov/cgi-bin/npgs/html/pvplist.pl.

Listed below are types of protections and their coordinating PVP statements.

CERTIFIED SEED

What is Seed Certification?

Seed certification is an internationally recognized system to preserve the genetic identity and purity of crop varieties.

How is Seed Certified?

Seed certification requires planting eligible seedstocks, field inspection of the growing crop, proper conditioning, representative sampling, thorough laboratory analysis, and proper labeling.

Who Produces Certified Seed?

Certified seed is produced by careful, conscientious growers, according to seed certification standards. Seed certification standards and procedures are available from MCIA.

Why buy Certified Seed?

Seed certification procedures provide the best possible third party assurance of good quality seed of known identity and purity.

What Should I Look for?

For certification to be valid, buyers must be provided proof of certification. Seed containers must bear an official certification label. Bulk seed sales must be accompanied by a Bulk Seed Sales Certificate.

BARLEY

NAME, CITY	PHONE NUMBER	ACREAGE	
		Reg	Cert

Conlon - Two-rowed spring barley developed for western North Dakota. Early maturity, high test weight, leaf disease resistance. Resistant to net blotch and powdery mildew. Moderately susceptible to spot blotch and Fusarium head blight. Susceptible to loose smut, leaf rust, septoria, scald, barley yellow dwarf virus, and QCCJ pathotype of wheat stem rust. Classified as a malting variety by AMBA. Released by North Dakota Agricultural Experiment Station in 1996. PVP(94) Title V.

Freeborn County

Albert Lea Seed House, Inc., Albert Lea 507-373-3161 26

Total Acres, Conlon 26

Lacey - High yielding variety with improved malting quality characteristics. It is six-row, smooth awn, white aleurone variety with good kernel plumpness. Lacey is average height with good lodging resistance; resistance to spot blotch and is similar to Robust for scab reaction. Classified as a malting variety by AMBA. Released by Minnesota Agricultural Experiment Station in 2000. License required for seed production. PVP(94) Title V.

BARLEY

NAME, CITY	PHONE NUMBER	ACREAGE	
		Reg	Cert

Quest - A six-rowed malting barley with improved Fusarium head blight resistance and lower mycotoxin (DON) levels. Quest has a semi-smooth awn, white aleurone and long rachilla hair. It is about the same height as Robust, but taller than Lacey with yield and grain protein levels similar to Tradition and Lacey. Selected by AMBA as a recommended malting variety in December 2010. Released by Minnesota Agricultural Experiment Station in 2010. License required for seed production. PVP(94) Title V is applied for.

Kittson County

Johnson Farms, Inc., Lloyd, Karlstad 218-436-2817 93

Total Acres, Quest 456

Rasmusson - High yielding variety with improved malting quality characteristics. It is six-row, semi-smooth awn, white aleurone variety with good kernel plumpness. Rasmusson is shorter than most current six-rowed malting varieties in the Midwest. It has performed well in Minnesota and North Dakota yield trials. It has good lodging resistance: resistance to spot blotch and is similar to Robust for scab reaction. Rasmusson is an AMBA recommended malting barley variety. Released by the Minnesota Agricultural Experiment Station in 2008. License required for seed production. PVP(94) Title V.

Freeborn County

OATS

NAME, CITY	PHONE NUMBER	ACREAGE	
		Reg	Cert
Badger - An early-maturing, high-yielding oat line. The heading date for Badger is similar to Kame. It is similar in height to Kame but has much better straw strength. Badger is a yellow oat with very good test weight. It has a good crown rust rating and is resistant to smut. Barley yellow dwarf virus tolerance is similar to other early varieties. Released by the Wisconsin Agricultural Experiment Station in 2010. No Registered class. License required for seed production. PVP (94).

Brennan - A hard red spring wheat bred and developed by AgriPro of Syngenta Seeds, Inc. It has medium-early maturity and very good test weight. It is a short semi-dwarf type with very strong straw strength. It is moderately resistant to the prevalent races of leaf rust. Foliar disease protection is very good. Brennan has intermediate tolerance to scab. Protein is intermediate and overall breadmaking characteristics are satisfactory. Brennan is broadly adapted to the spring wheat growing areas of North and South Dakota, Minnesota and Montana. Released in 2009. PVP(94) Title V.

Clay County

Petermann Seeds, Inc., Hawley 218-483-3302

Grant County

Backman Seeds, Inc., Herman 320-677-2231

Briggs - Early, semi-dwarf, hard red spring wheat. Resistant to prevalent races of leaf and stem rust, moderately resistant to leaf spotting and intermediate for scab resistance. Dough of Briggs tends to be weak to mellow, but baking data indicates good loaf volume and internal characteristics. Released by South Dakota Agricultural Experiment Station in 2002. PVP(94) Title V.

Polk County

Fosston Tri-Coop, Fosston 218-435-6919 45

Faller - Medium maturity, semi-dwarf hard red spring wheat. It is a high yielding line with medium test weight. Faller is medium height and medium straw strength similar to Alsen. Faller has excellent leaf and stem disease resistance. Faller has shown good Fusarium head blight resistance. Released by North Dakota State University. License required for seed production. PVP(94) Title V.

Forefront - A tall semi-dwarf variety with high yield potential, test weight, grain protein content, and good bread loaf volume. Forefront is early maturing and is moderately resistant to stem rust, leaf rust and Fusarium head blight. Developed by the South Dakota Agricultural Experiment Station and released in 2011. PVP (94) Title V is applied for.

Jenna - A hard red spring wheat bred and developed by AgriPro of Syngenta Seeds, Inc. It has medium-late maturity and very good test weight. It has standard semi-dwarf height and very strong straw strength. It is moderately resistant to the prevalent races of leaf rust. Foliar disease protection is very good. Jenna has intermediate tolerance to scab. Protein is intermediate and overall breadmaking characteristics are satisfactory. Jenna is broadly adapted to the spring wheat growing areas of North and South Dakota, Minnesota and Montana. Released in 2009. PVP(94) Title V.

Norden Wheat

NEW

High Yield

Strong Straw

High Test Weight

2012 Release

UNIVERSITY OF MINNESOTA

Driven to Discover

Norden - A competitive yield with high test weight and very good straw strength. It is a medium maturity variety similar to Faller. It has improved leaf rust resistance, because its resistance is not based on the Lr21 gene, which is common in several other varieties. Norden also has good stem rust resistance and it is moderately resistant to scab, similar to Prosper. Protein levels are similar to Prosper with acceptable milling and baking qualities. License required for seed production. PVP(94) Title V is contemplated.

Oklee - An early semi-dwarf with high yield potential. Heading date similar to Walworth and Briggs, it has yielded well in both northern and southern test locations. Test weight and protein percent have been above average. It has a moderate reaction to Fusarium head blight and is resistant to stem rust and moderately resistant to leaf rust and other leaf diseases. It has good lodging resistance. Released by the Minnesota Agricultural Experiment Station. License required for seed production. PVP(94) Title V.

Prosper - A hard red spring wheat variety adapted to eastern North Dakota and western Minnesota. Prosper is intended to provide growers with a very high yielding variety that includes an overall good leaf disease package. It has medium straw strength, semi-dwarf height, with an early to medium-early maturity. Protein is similar or slightly better than Faller with excellent milling and baking properties. Prosper is moderately resistant to scab and leaf and stem rusts. A joint release from North Dakota and Minnesota in spring 2011. PVP(94) Title V is applied for.

RB07 - Early, semi-dwarf hard red spring wheat. A high yielding variety that has been consistently above average across all Minnesota locations. The heading date is similar to Oxen. It is medium height with moderately strong straw. It has above average protein and medium test weight. RB07 has shown good resistance to Fusarium head blight. It has excellent leaf and stem disease resistance. It is resistant to pre-harvest sprouting with good falling numbers and medium high baking qualities. Released by the Minnesota Agricultural Experiment Station. License required for seed production. PVP(94) Title V.

Rollag Wheat

Strong Straw
Excellent Scab Resistance
High Protein
2011 Release

 **UNIVERSITY OF MINNESOTA**
Driven to Discover

SPRING WHEAT

NAME, CITY	PHONE NUMBER	ACREAGE	
		Reg	Cert
Rollag - A unique combination of highest available resistance to Fusarium head blight (scab) and strong straw. The scab rating for Rollag is equal to Glenn and Brick but Rollag has better yield. It is a medium maturity variety with above average protein and test weight. It is comparable to Barlow for yield but has much better straw strength. It is resistant to stem rust, with moderate resistance to leaf rust and moderate resistance to other leaf diseases. Released by the Minnesota Agricultural Experiment Station in 2011. License required for seed production. PVP(94) Title V is applied for.

Sabin - Medium maturity hard red spring wheat with good scab tolerance. In testing, Sabin has consistently been above average in grain yield with good test weight and protein. The heading date of Sabin is similar to Freyr. It is average in height with medium straw strength. Sabin has the Sumai 3 source for scab resistance rating of 4 (on 1-9 scale), similar to Faller and Freyr. It is resistant to stem rust, with moderate resistance to leaf rust and moderate resistance to other leaf diseases. Released by the Minnesota Agricultural Experiment Station in 2009. License required for seed production. PVP(94) Title V.

Samson - Medium maturity semi-dwarf hard red spring wheat. It has good straw strength with medium test weight and medium high protein. Samson has a moderately susceptible to susceptible reaction to scab and is resistant to stem rust and moderately resistant to moderately susceptible to leaf rust and foliar diseases. Released by Western Plant Breeders 2006. PVP (94).

SY Soren - A hard red spring wheat developed by Syngenta Seeds, Inc. It has medium maturity and very good test weight. It is a short semi-dwarf, slightly taller than Kelby. Straw strength is very good, between Kelby and Kuntz. It is resistant to stem rust and moderately resistant to leaf rust. Protection to foliar diseases has been very good. SY Soren contains the Sumai 3 genetic background for Fusarium head blight tolerance and has good scab tolerance. Protein levels have been high, slightly lower than Kelby. Overall breadmaking characteristics are very good. PVP(94) Title V.

SY605 CL - A hard red spring wheat bred and developed by Syngenta Seeds, Inc. It contains ALS-1(653) and ALS-2(653) genes conferring tolerance to the BASF herbicide 'Beyond'. It has early maturity, very good test weight and standard height. Foliar disease protection is very good. Protein is high and overall breadmaking characteristics are satisfactory. SY605 CL is adapted to the spring wheat growing region of the Northern Plains. PVP(94) Title V.

Polk County

Capistran Seed Company, Crookston..... 218-281-7840

Vantage - A good standing, medium-late maturing hard red spring wheat that can achieve high yield of high test weight and high protein grain. Vantage is resistant to stem rust and moderately resistant to moderately susceptible to leaf rust and foliar disease (tan spot and Septoria tritici). Vantage has a moderately susceptible reaction to Fusarium head blight. Quality of Vantage is good based on test weight, protein, and flour SDS sedimentation values (a measure of gluten strength). Developed by WestBred LLC. Released in 2006. PVP (94).

WB-Digger - A medium height, medium maturity semi-dwarf hard red spring wheat. It is moderately resistant to the prevalent races of leaf rust and foliar disease but is susceptible to scab. WB-Digger is a very high yielding variety with good standability. Protein and test weight are medium and bread-baking characteristics are good. In areas where scab is a problem, fungicide treatment is recommended. Released by WestBred LLC in 2009. PVP (94).

Expedition - Hard red winter wheat, awned, white-chaffed, early maturing, semi-dwarf. Plant height is short, winterhardiness is rated good-excellent. Straw strength is fair. Is rated resistant to prevalent races of stem rust, however, is moderately susceptible to leaf rust. Exhibits some tolerance to head scab but is susceptible to tan spot and Hessian fly and had an intermediate reaction to soil-borne mosaic virus. End-use characteristics are rated acceptable overall. Released by South Dakota Agricultural Experiment Station in 2003. PVP(94) Title V.

NE01643 (Husker Genetics Overland Brand) - An awned, semi-dwarf hard red winter wheat, with moderate winterhardiness. It is medium height with good straw strength. It has average test weight and good protein. It is moderately resistant to leaf rust, stripe rust, and Hessian fly. Husker Genetics Brand Overland also is more tolerant to Fusarium head blight than many widely grown lines. Husker Genetics Brand Overland was developed cooperatively by the Nebraska Agricultural Experiment Station and the USDA-ARS. A license is required for seed production. Husker Genetics Brand Overland has no saleable registered class it can only be sold as certified seed. PVP(94) Title V.

Le Sueur County

Stangler Seed Co LLC, Kilkenny 507-595-2883 75

Total Acres, NE01643 (Husker Genetics Overland Brand) 75

SY Wolf - A hard red winter wheat best adapted to North and South Dakota and Western Nebraska. It is moderately resistant to leaf rust, powdery mildew, septoria and tan spot. Developed by Syngenta Seeds, Inc. PVP (94) Title V.

Polk County

AgriMAX, Fisher 218-891-2211

WB-Matlock - A winter wheat that is well-adapted to the Northern plains. Released by WestBred LLC in 2010. PVP (94).

QUALITY ASSURED SEED

What is Quality Assured Seed?

Quality Assured (QA) seed has met standards designed to preserve the purity and identity of a crop variety. Standards, similar to seed certification, enable a company to produce and market seed according to sound quality management practices.

How is Seed Quality Assured?

The quality assurance process includes field inspections, laboratory testing, audits of production records, and on-site evaluations of conditioning and treatment facilities. Seed meeting all requirements is eligible to be labeled with the AOSCA QA logo.

Who Produces Quality Assured Seed?

Seed producers of all crop types may utilize a QA program to access a complete service for seed sold as varieties, hybrids, brands or blends. QA programs can be customized to support an existing quality management system or as part of an AOSCA program.

Why buy Quality Assured Seed?

Quality Assured seed provides assurance to seed buyers that the seed is of known purity and quality as verified by an unbiased third-party.

What Should I Look for?

Seed meeting QA standards may bear a Quality Assurance label or be marked with a QA logo. Buyers of bulk quality assured seed may be provided with a QA Bulk Sales Certificate.

Protect and promote your seed using Greif's Multiwall, Woven Poly Pro (BOPP) and Bulk bag solutions

- High performance paper options.
- Improved stacking strength and handling, with sharper printing.
- Quick deliveries for your seed orders.
- Promote your identity with Greif's in-house graphic design and production.
- Immediate response stock bags and bulk bags.
- Seed bag experts serving your needs for over 50 years.

APPROVED FACILITY PROGRAM

What is the Approved Facility Program?

MCIA's Approved Facility Program provides an evaluation and approval process for facilities processing and selling seed and identity-preserved (IP) grain products. Facilities processing and/or handling products sold under the seed certification, QA seed and IP grain programs must be inspected and approved by MCIA.

How is a Facility Approved?

To be approved, facilities must meet requirements appropriate for the seed or grain to be processed. Approval is granted on an annual basis for conditioning and handling specific seed types or for processing grain products for specified end uses.

Why Utilize an Approved Facility?

Approved facilities are inspected on a regular basis to determine on-going conformance to requirements necessary to preserve the product identity and quality and adequately process products.

What Should I Look For?

Approved facilities are issued Certificates of Approval annually which are to be prominently posted in their place of business. MCIA also provides Approved Facility signs.

For more information, call MCIA or visit our website at www.mncia.org.

How well do you
know your seed?

Be sure.

Genetic Purity · Trait Purity · Physical Purity
GMO Event Identity · Zygosity · Adventitious Presence
Germination · Vigor · Chemical Analysis

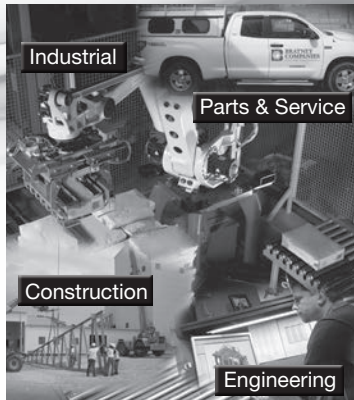

At BioDiagnostics, we combine a cumulative 100+ years of practical, industry experience with cutting-edge genetics technology to give our partners deep insight into their seeds. We're scientists and problem solvers. That means we can help you figure out not only which tests are relevant to your seed lot, but also how to use the results, so you can achieve the highest seed quality – and grow your business.

Certified Seed Doesn't Cost...

It Pays!

▲ PROVEN QUALITY

- High germination
- Fewer weed seeds
- Less inert matter
- Less seed-borne disease
- Known varieties

▲ SUPERIOR PERFORMANCE

- Better plantability
- Rapid stand establishment
- More uniform maturity
- Easier harvest
- Less dockage

▲ GREATER PROFITABILITY

- Newest genetics

Biological Enhancements for Soybeans, Corn and Wheat

For Corn and Wheat – SabrEx Root Inoculant with **iGET Technology** has been shown to create a more robust root system, induce resistance to plant stresses and increase water and nutrient efficiency. Available in two formulations.

All the benefits of Excalibre plus the growth stimulant benefits of **SabrEx**.

A specially formulated blend of encapsulated Rhizobia soybean inoculant plus the benefits of **SabrEx**.

A low volume liquid formulation that drastically reduces seed bridging and sticking. It contains three times the Rhizobia and goes on at 1.2 fl.oz. per 100# of seed. Can be used with **Plus 30 Extender** for longer planting windows.

A triple stack Rhizobia strain package for top yield responses. Available in Sterile Liquid 10 Liter, Sterile Liquid 3.1 liter and Sterile Peat. Use with Plus 30 Extender to extend the planting window up to 30 days.

Quality.

since 1900

More Thorough.
More Data.
More Value.

From innovative genetics to the latest in molecular technology, we have an uncompromising commitment to method validation and statistical integrity.

For over 100 years, we have built a strong foundation by providing a sound scientific approach to testing. We are proud to be an ISO 9001:2008 certified organization.

We are proud to offer:

- *Seed Certification*
- *Field Inspection Services*
- *Identity Preservation (IP)*
- *Laboratory Testing*
 - *Conventional Seed Tests*
 - *Genetics and Trait Testing*
 - *Bioassay Herbicide Testing*

NATIVE SEED CERTIFICATION

What is Native Seed Certification?

Native plants are often used for re-vegetation of roadsides, construction sites, wildlife plantings and other projects. MCIA's Native Seed Certification Program verifies that the genetic identity of native grasses and forbs (wildflowers) has been maintained through all phases of seed production.

How is Native Seed Certified?

The certification process consists of several steps which include seed source verification, inspection of seed production sites and seed testing. MCIA issues seed labels or certificates to producers whose production has met all certification standards.

Who Produces Native Certified Seed?

Native seed is produced by careful, conscientious growers according to certification standards designed to preserve the genetic identity of native plant species. MCIA surveys producers in the fall and spring to determine availability. The survey results are posted on the MCIA website at www.mncia.org.

Why Buy Certified Native Seed?

Certified native seed provides seed buyers with third party assurance that the genetic identity or source of native grasses and forbs is accurately described on the label.

What Should I Look For?

Three different germplasm types are possible based on the amount of intentional selection that has taken place. They are:

Source Identified, marked with a yellow certification tag.

Selected marked with a green certification tag.

Tested, marked with a blue certification tag.

Alternatively, a Certification Certificate may be provided as proof of certification to buyers of certified native seed.

NATIVE SEED

Enhancing Value, Improving Marketability

NOXIOUS WEED SEED FREE FORAGE AND MULCH

What is Noxious Weed Seed Free Forage and Mulch?

This certification program for forage (hay, cubes and pellets) and mulch is designed to limit the spread of noxious weeds. MCIA is designated under Minnesota Law as the official Noxious Weed Seed Free Forage and Mulch Certification Agency in Minnesota. The MCIA program conforms to standards developed by the North American Weed Management Association (NAWMA) which allow properly labeled forage and mulch certified by MCIA to be shipped into restricted areas of the United States and Canada.

How is Noxious Weed Seed Free Forage and Mulch Certified?

Certification requires fields and storage locations to be inspected by MCIA prior to harvest. Labels with unique serial numbers are issued for forage and mulch production meeting certification standards.

Who Produces Certified Noxious Weed Seed Free Forage and Mulch?

It is produced by conscientious growers who are able to produce forage and mulch that meets program standards. MCIA surveys producers in the fall and spring to determine availability. The survey results are posted on the MCIA website at www.mncia.org.

Why Buy Certified Noxious Weed Seed Free Forage and Mulch?

Buyers are provided assurance that forage and mulch certified through this program is free of noxious weed seeds or other propagating parts. In Minnesota, certified mulch is often required for highway roadside plantings and other re-vegetation projects. Many public lands in the western United States require that hay transported into these areas be certified noxious weed free.

What Should I Look For?

For certification to be valid, an official certification label must be attached to each bale of forage or mulch.

For more information, call MCIA or visit our website at www.mncia.org.

QUALITY ASSURED SOD

Insist on this certificate for assurance of Salt Tolerant Sod

- Grown from premium quality seed
 - ♦ Selected turf grass varieties
 - ♦ Quality assured seed mixes from approved vendors
- Comprehensive sod production standards
 - ♦ Professionally grown by qualified producers
 - ♦ Stringent sod quality requirements
- Rigorous third party quality assurance process
 - ♦ Seed to harvest oversight
 - ♦ On-site inspections
- Certificate of Assurance with each delivery
 - ♦ Identifies sod that has met all requirements

Program proceeds help fund University of Minnesota research to improve turf and sod performance.

ORGANIC CERTIFICATION SERVICES

Where Does MCIA get its Authority?

MCIA is an Accredited Certifying Agent (ACA) authorized by the USDA National Organic Program (NOP). MCIA is authorized to provide organic certification services to crop, wild crop and livestock producers; handlers and processors.

What is Organic Certification?

Certification is the process whereby a producer or handler is approved by an ACA as being in compliance with the NOP regulations and is then authorized to sell, label, or represent products as being “Certified Organic”.

Who Uses MCIA Organic Certification Services?

Operations certified by MCIA include food processors, distributors, retailers, agricultural handling facilities, wild crop collectors, livestock producers and field crop, vegetable and fruit producers.

Why Use MCIA as your Organic Certifier?

MCIA provides its clients with a user-friendly, efficient, cost-effective certification process. MCIA’s service-oriented staff is available to provide prompt, professional assistance to help organic producers and handlers understand organic program requirements and guide them through the organic certification process.

How Do You Complete Organic Certification?

The Certification process requires an application, inspection and review to determine if a producer or handler is in compliance with the NOP regulations. Upon completion of the process the operation is then authorized to sell, label, or represent products as being “Certified Organic”. All operations must apply and be inspected annually.

For more information, call MCIA or visit our website at www.mncia.org.

ORGANIC SEED USE

There are often questions regarding the requirement for the use of organic seed and other planting stocks in organic production systems. NOP §205.204 states that an organic “producer must use organically grown seeds, annual seedlings, and planting stock, Except, That, (1) Nonorganically produced, untreated seeds and planting stock may be used to produce an organic crop when an equivalent organically produced variety is not commercially available,” and “(4) Nonorganically produced planting stock to be used to produce a perennial crop may be sold, labeled, or represented as organically produced only after the planting stock has been maintained under a system of organic management for a period of no less than 1 year.”

Most certifiers require organic producers to conduct thorough and diligent searches for organic seed before authorizing the use of non-organic seed. Consult the list of producers in this directory to locate seed and to identify seed conditioners that have been certified to process organic seed. However, not all sources of organic seed are listed and it must be understood that seed availability changes throughout the season. Call MCIA if you need assistance in locating organic seed.

It is important to remember that producing high quality seed (whether conventional or organic) requires planning, use of effective production practices and proper handling and conditioning methods. MCIA provides certification, quality assurance and other services for seed producers and conditioners and can provide assistance to those interested in getting started in organic seed production. Contact MCIA for information on seed production practices and requirements. MCIA’s website (www.mncia.org) contains information on MCIA programs and services available to seed producers.

Those wishing to offer organic seed for sale must understand and meet Federal and State seed law labeling and other requirements pertaining to seed in addition to the organic requirements. For information about selling seed in Minnesota, please refer to the following Minnesota Department of Agriculture website: <http://www.mda.state.mn.us/licensing/licensetypes/fmsrps.aspx>
