Every company has test acreage. We have proving ground.

AgriPro® brand varieties from Syngenta are locally adapted for greater performance where it counts. North America's largest wheat breeding program develops varieties that resist disease while maximizing grain yield and quality. Innovation in the lab combined with thousands of research trials provide farmers a superior seed resource backed by the strength of Syngenta.

Top Performers for Minnesota

New! SY Rowyn — The All-Around Performer

- Strong Fusarium head blight and disease tolerance in a robust hard red spring variety
- Broadly adapted medium-early maturity with high yield potential

SY Soren — Maximum return per acre

- Yield and quality combine with straw strength and Fusarium head blight tolerance
- Possibly the most adaptable and balanced variety in the marketplace!

Prove it on your own acres. Available as certified seed grown and distributed by local AgriPro associates. For more information on AgriPro wheat varieties, contact your local AgriPro associate, call 866-943-5327 (866-Yield-AP) or visit AgriProwheat.com.

Notice to Buyers

The Minnesota Crop Improvement Association can assume no financial responsibility for seed or other products listed in this Directory or for disagreements over sales which may arise from this list. However, complaints about certified or quality assured products addressed to the Association will be investigated. Claims over seed performance involving the Minnesota Crop Improvement Association must be addressed as provided in the Minnesota Department of Agriculture Rules for Arbitration of Seed Performance Disputes. Inquiries regarding product availability should be directed to producers and conditioners listed. Buyers should insist on proof of conformance (e.g. attachment of certification labels to bags or being provided with a certificate of conformance) when purchasing certified or quality assured products.

ABOUT MCIA

Mission Statement

Minnesota Crop Improvement Association is an organization dedicated to improving the productivity, profitability and competitive position of producers, processors and distributors of agricultural products by providing services to enable them to provide high-quality products to Minnesota, the United States and the World.

Background

Minnesota Crop Improvement Association (MCIA) provides a diverse offering of certification and quality assurance services to a wide array of agricultural and food product producers and handlers. Products certified by MCIA include field crop seed, turf seed, sod, native plant seed, noxious weed seed free forage and mulch, identity-preserved grains for specialty grain markets as well as numerous organic crops, livestock and food products. MCIA also provides customized quality assurance services such as field inspections, seed and grain facility evaluations, as well as other third party audit and on-site evaluations. MCIA produces and distributes Foundation seed of publicly developed crop varieties and serves as the marketing agent for licensing varieties developed at the University of Minnesota.

MCIA is a 501(c)(5) not-for-profit association funded by the fees it charges for the services it provides. MCIA operates from its offices on the St. Paul Campus of the University of Minnesota. MCIA serves its over 500 members with 13 full-time employees including three field supervisors located at various locations throughout the state. In addition, MCIA utilizes nearly 40 part-time employees to assist with field inspections and other seasonal work. MCIA is governed by an 11 member Board of Directors elected from its membership.

The 2013 Board members are:

Duane Dahlman, Cokato, Chairman

Brent Benike, Baudette

Jim Kukowski, Strathcona

David Boehm, West Fargo, ND, Vice Chairman

Craig Damstrom, Alexandria

Jay Miller, Shakopee

Neal Anderson, St. Peter, Secretary

Nancy Jo Ehlke, U of MN, St. Paul

Mike Zabel, Plainview

Paul Adams, Wendell, Treasurer

Paul Kjolhaug, Willmar

History

MCIA has served the agricultural industry in the Upper Midwest for over 100 years. MCIA was founded in 1903 to promote the breeding, growing and distribution of improved field crop varieties developed at the University of Minnesota to crop producers throughout the state. A Directory of members was first published in 1906 and the publication of a list of those with inspected and approved seed began in 1912. In 1955, the Minnesota Seed Law was amended to officially recognize MCIA as the official seed certifying agency of Minnesota. Over the years, MCIA has expanded its programs and related services to meet the needs of its members and the demands of a changing agricultural and food industry. It was formally designated as the official certification agency in Minnesota for noxious weed seed free forage and mulch in 1997 and was accredited as an organic certifier under the National Organic Program in 2002.

As an independent third-party, MCIA strives to provide superior programs and services to meet the needs of today's changing agricultural world.

FOUNDATION SEED

What is Foundation Seed?

Foundation seed is the initial generation of seed in the seed certification program. Foundation seed of crop varieties is planted by seed growers to produce Registered and Certified class seed.

How is Foundation Seed Produced?

The MCIA Foundation Seed Program operates under an agreement with the University of Minnesota Agricultural Experiment Station to increase, maintain, and distribute Foundation seed of new and established publicly developed varieties. MCIA cooperates closely with the University of Minnesota plant breeding programs in soybeans, wheat, barley, oats and grasses. MCIA also cooperates with similar organizations in neighboring states to supply varieties developed by other public plant breeding programs.

Who is Eligible to Purchase Foundation Seed?

Foundation seed is available to MCIA members who have previous history producing seed in the certification program. Eligible producers are notified of varieties available and procedures for ordering seed.

What Should I Look for?

A Foundation Seed certification label must be attached to each container. For seed sold in bulk, a Bulk Seed Sales Certificate must accompany each load of seed.

Contact MCIA for a list of available varieties or to buy Foundation Seed.

Enhancing Value, Improving Marketability

VARIETY LICENSING

What is Variety Licensing?

Minnesota Crop Improvement Association (MCIA) is the licensing agent for agronomic crops developed at the University of Minnesota. Plant breeders at the University continue to develop new varieties of soybeans, wheat, barley, oats and grasses. MCIA serves as the primary point of contact for producers and processors interested in new Minnesota varieties.

Why are Some Varieties Licensed?

Crop varieties that are suitable for large scale commercial production are released as public varieties through the traditional Foundation seed distribution program. However, many recent releases are food grade or special use varieties that require unique production and handling capabilities or access to specialty markets.

Who is Eligible to License Varieties?

Producers or companies that can demonstrate their capability to successfully produce and commercialize products of the type to be licensed will be considered as licensing partners to the University.

How are Varieties Licensed?

MCIA provides a Material Transfer Agreement (MTA) which allows an individual or company to evaluate the agronomic traits and to assess the potential for commercialization. Parties interested in licensing can submit a proposal for licensing to MCIA. Proposals are reviewed based on criteria established to identify licensing partners most appropriate for the variety being released.

PLANT VARIETY PROTECTION

The developer of a new distinct variety may obtain protection for that variety if they choose to do so, provided the variety meets the requirements of the Plant Variety Protection Act (PVPA). A certificate is provided to the developer of a variety which grants exclusive rights for reproducing and marketing the seed. The PVPA is administered by the United States Department of Agriculture.

Many of the varieties listed in this publication have either a Certificate of Plant Variety Protection (PVP) issued to them or an application has been made for Plant Variety Protection. PVP - Title V specifies seed be sold by variety name only as a class of certified seed. If a variety is not protected with the Title V option, the owner of the variety still has the exclusive right to determine who can produce and market the variety as a seed product.

A majority of the varieties are now protected under the 1994 amendment of the Plant Variety Protection Act. For PVP 94 protected varieties, you may save seed for your own planting only; you may not sell it to a neighbor without specific permission of the applicant for protection.

Varieties listed on the following page were commonly grown in Minnesota in the last few years. Additions or deletions may occur at any time. It is the responsibility of the buyer and seller to confirm the PVP status of a crop variety before buying or selling a specific variety. It is illegal for anyone to purchase "grain" of a protected variety and utilize it for planting purposes.

This is not an all inclusive list. There are many varieties not listed that are protected by PVP. Call MCIA if you are unsure of a variety's PVP status or check the status on the internet at www.ars-grin.gov/cgi-bin/npgs/html/pvplist.pl.

Listed below are types of protections and the appropriate PVP statements.

CERTIFIED SEED

What is Seed Certification?

Seed certification is an internationally recognized system to preserve the genetic identity and purity of crop varieties.

How is Seed Certified?

Seed certification requires planting eligible seedstocks, field inspection of the growing crop, proper conditioning, representative sampling, thorough laboratory analysis, and proper labeling.

Who Produces Certified Seed?

Certified seed is produced by careful, conscientious growers, according to seed certification standards. Seed certification standards and procedures are available from MCIA.

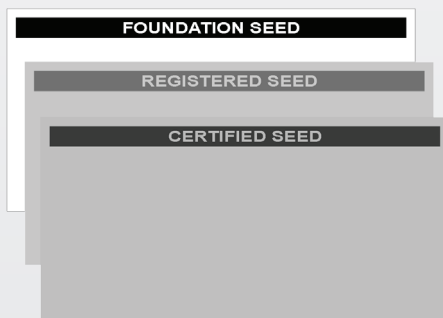

Why buy Certified Seed?

Seed certification procedures provide the best possible third party assurance of good quality seed of known identity and purity.

What Should I Look for?

For certification to be valid, buyers must be provided proof of certification. Seed containers must bear an official certification label. Bulk seed sales must be accompanied by a Bulk Seed Sales Certificate.

BIG BLUESTEM

NAME, CITY	PHONE NUMBER	ACREAGE	
		Reg	Cert

Bison - Early maturity, well-adapted to northern climates. Uniform plant type, grows 3 to 6 feet tall. Good leafiness, high plant vigor and seed yield, high in forage quality. No Registered class. Released by North Dakota and Minnesota Agricultural Experiment Stations and USDA-ARS/USDA-SCS in 1989.

Kittson County

Carlson Prairie Seed Farm, Inc.,
Lake Bronson.....218-754-2693

BIRDSFOOT TREFOIL

Norcen - Broad leaved type with intermediate growth habit. Flowers earlier than Carroll but later than Viking. Less winter-hardy than Leo and Carroll. Developed cooperatively by Experiment Stations of the North Central states. Released in 1981.

Lake of the Woods County

Pieper Farm, Daniel, Williams218-783-4352

Roseau County

Parsley, Norvel, Warroad.....218-386-2229 116

FIELD PEAS

Matrix - A late maturing green field pea with good standability and powdery mildew resistance. Seed size is large with a very high yield potential. With bleaching and/or dimpling a possibility, Matrix may not always meet edible grade requirements. Adapted to a broad area but performs best in high-yielding eastern environments. Released by Limagrain Advanta Nederland B.V. PVP(94) Title V.

Otter Tail County

Leaderbrand Bros., New York Mills.....218-385-3656 31

FLAX

Rahab 94 - A high yielding brown seed flax variety that is medium maturity, height, and seed size. Rahab 94 is resistant to flax rust and moderately resistant to flax wilt. Released by South Dakota Agricultural Experiment Station in 1994.

Kittson County

Bloomquist Farms, Inc., Drayton218-455-3863 62

INDIANGRASS

Tomahawk - Early, fine-leaved, medium tall; superior in winterhardiness and persistence. No Registered class. Released by North Dakota, South Dakota and USDA -ARS in 1988.

Kittson County

OATS

126 - A true spring forage oat with dark green foliage, erect growth habit and very good standability. A delayed-heading oat, much of its forage mass and quality come from an extended maturity. Biomass accumulation is extraordinary. 126 has shown resistance to rust and most other leaf and stem diseases, but is susceptible to barley yellow dwarf virus. Released by ProGene LLC. PVP(94).

Freeborn County

Albert Lea Seed House, Inc.,
Albert Lea507-373-3161 27

Badger - An early-maturing, high-yielding oat line. The heading date for Badger is similar to Kame. It is similar in height to Kame but has much better straw strength. Badger is a yellow oat with very good test weight. It has a good crown rust rating and is resistant to smut. Barley yellow dwarf virus tolerance is similar to other early varieties. Released by the Wisconsin Agricultural Experiment Station in 2010. No Registered class. License required for seed production. PVP (94).

UNIVERSITY OF MINNESOTA

Driven to Discover

Deon - A high yielding spring oat with overall good agronomic traits. It has good test weight and is medium yellow in color. Maturity rating, height and lodging score is similar to Rockford but Deon has a better resistance to barley yellow dwarf virus. It also has highly effective crown rust resistance and resistance to smut. Released by the Minnesota Agricultural Experiment Station in 2011. License required for seed production. PVP (94) Title V is contemplated.

Glenn - A hard red spring wheat developed at North Dakota State University and released by the North Dakota Agricultural Experiment Station, and released because it combines very high level of resistance to Fusarium head blight with high yield and grain volume, as well as excellent end-use quality for the domestic and export wheat markets. License required for seed production. PVP(94) Title V.			
Freeborn County			
Albert Lea Seed House, Inc., Albert Lea	507-373-3161	88	
Jenna - A hard red spring wheat bred and developed by AgriPro of Syngenta Seeds, Inc. It has medium-late maturity and very good test weight. It has standard semi-dwarf height and very strong straw strength. It is moderately resistant to the prevalent races of leaf rust. Foliar disease protection is very good. Jenna has intermediate tolerance to scab. Protein is intermediate and overall breadmaking characteristics are satisfactory. Jenna is broadly adapted to the spring wheat growing areas of North and South Dakota, Minnesota and Montana. Released in 2009. PVP(94) Title V.

LCS Iguacu - A hard red spring wheat with awns adapted to the growing regions of North Dakota. It's primary purpose is for milling and baking of breads using processed and whole wheat flour. LCS Iguacu is moderately resistant to prevalent races of leaf rust in North Dakota. Distributed by Limagrain Cereal Seeds, LLC. PVP(94) Title V is contemplated.

Polk County

Capistran Seed Company, Crookston ...218-281-7840

LCS Powerplay - A hard red spring wheat with awns, adapted to the Northern Plains. It has good protein so its main use will be as breadstuffs. It is a mid-season variety with short straw and has good resistance to lodging. LCS Powerplay is resistant to stripe rust, leaf rust and stem rust, and moderately resistant to leaf diseases, tan spot and scab. Developed by Limagrain Cereal Seeds LLC. PVP (94) Title V is applied for.

Norden Wheat

High Yield

Strong Straw

High Test Weight

UNIVERSITY OF MINNESOTA

Driven to Discover

Norden - A consistently good yield with high test weight and very good straw strength. It is a medium maturity variety similar to Faller. It has improved leaf rust resistance, because its resistance is not based on the Lr21 gene, which is common in several other varieties. Norden also has good stem rust resistance and it is moderately resistant to scab, similar to Prosper. Protein levels are similar to Prosper with acceptable milling and baking qualities. License required for seed production. PVP(94) Title V is applied for.

Prosper - A hard red spring wheat variety adapted to eastern North Dakota and western Minnesota. Prosper is intended to provide growers with a very high yielding variety that includes an overall good leaf disease package. It has medium straw strength, semi-dwarf height, with an early to medium-early maturity. Protein is similar or slightly better than Faller with excellent milling and baking properties. Prosper is moderately resistant to scab and leaf and stem rusts. A joint release from North Dakota and Minnesota in spring 2011. PVP(94) Title V.

RB07 - Early, semi-dwarf hard red spring wheat. A high yielding variety that has been consistently above average across all Minnesota locations. The heading date is similar to Oxen. It is medium height with moderately strong straw. It has above average protein and medium test weight. RB07 has shown good resistance to Fusarium head blight. It has excellent leaf and stem disease resistance. It is resistant to pre-harvest sprouting with good falling numbers and medium high baking qualities. Released by the Minnesota Agricultural Experiment Station. License required for seed production. PVP(94) Title V.

Rollag - A unique combination of highest available resistance to Fusarium head blight (scab), strong straw and yield. The scab rating for Rollag is equal to Glenn and Brick but Rollag has better yield. It is a medium maturity variety with above average protein and test weight. It is comparable to Barlow for yield but has much better straw strength. It is resistant to stem rust, with moderate resistance to leaf rust and moderate resistance to other leaf diseases. Released by the Minnesota Agricultural Experiment Station in 2011. License required for seed production. PVP(94) Title V.

Haugrud Seed Plant, Rothsay	218-493-4275		

SY Soren - A hard red spring wheat developed by Syngenta Seeds, Inc. It has medium maturity and very good test weight. It is a short semi-dwarf, slightly taller than Kelby. Straw strength is very good, between Kelby and Kuntz. It is resistant to stem rust and moderately resistant to leaf rust. Protection to foliar diseases has been very good. SY Soren contains the Sumai 3 genetic background for Fusarium head blight tolerance and has good scab tolerance. Protein levels have been high, slightly lower than Kelby. Overall breadmaking characteristics are very good. PVP(94) Title V.

Vantage - A good standing, medium-late maturing hard red spring wheat that can achieve high yield of high test weight and high protein grain. Vantage is resistant to stem rust and moderately resistant to moderately susceptible to leaf rust and foliar disease (tan spot and Septoria tritici). Vantage has a moderately susceptible reaction to Fusarium head blight. Quality of Vantage is good based on test weight, protein, and flour SDS sedimentation values (a measure of gluten strength). Developed by WestBred LLC. Released in 2006. PVP (94).

WINTER WHEAT

NAME, CITY	PHONE NUMBER	ACREAGE	
		Reg	Cert

Arapahoe - Awned, white-chaffed. Medium-early, medium height. Moderately good lodging resistance, relatively high in kernel protein and test weight. Moderately resistant to current prevalent races of leaf and stem rust, moderately tolerant of Cephalosporium stripe. Released by Nebraska Agricultural Experiment Station in 1988.

McLeod County

Thalman Seeds, Inc., Plato320-238-2185 36

Darrell - Medium maturity. Similar height to Arapahoe with better straw strength than Arapahoe. Winter survival has shown to be excellent. Yield potential is extremely high. It has good milling and average baking quality. It is resistant to stem rust and is moderately susceptible to leaf rust. It is moderately susceptible to wheat streak mosaic virus. It has good resistance to scab. It has shown good resistance to leaf spotting diseases. Developed by South Dakota Agricultural Experiment Station and released by SDAES and the Nebraska Agricultural Experiment Station in 2006. License required for seed production. PVP(94).

Norman County

Star of the North, Gary218-356-8300 8

WINTER WHEAT

NAME, CITY	PHONE NUMBER	ACREAGE	
		Reg	Cert

Expedition - Hard red winter wheat, awned, white-chaffed, early maturing, semi-dwarf. Plant height is short, winter hardiness is rated good-excellent. Straw strength is fair. Is rated resistant to prevalent races of stem rust, however, is moderately susceptible to leaf rust. Exhibits some tolerance to head scab but is susceptible to tan spot and Hessian fly and had an intermediate reaction to soil-borne mosaic virus. End-use characteristics are rated acceptable overall. Released by South Dakota Agricultural Experiment Station in 2003. PVP(94) Title V.

Freeborn County

Albert Lea Seed House, Inc.,
Albert Lea507-373-3161 102

QUALITY ASSURED SEED

What is Quality Assured Seed?

Quality Assured (QA) seed has met standards designed to preserve the purity and identity of a crop variety. Standards, similar to seed certification, enable a company to produce and market seed according to sound quality management practices.

How is Seed Quality Assured?

The quality assurance process includes field inspections, laboratory testing, audits of production records, and on-site evaluations of conditioning and treatment facilities. Seed meeting all requirements is eligible to be labeled with the AOSCA QA logo.

Who Produces Quality Assured Seed?

Seed producers of all crop types may utilize a QA program to access a complete service for seed sold as varieties, hybrids, brands or blends. QA programs can be customized to support an existing quality management system or as part of an AOSCA program.

Why buy Quality Assured Seed?

Quality Assured seed provides assurance to seed buyers that the seed is of known purity and quality as verified by an unbiased third-party.

What Should I Look for?

Seed meeting QA standards may bear a Quality Assurance label or be marked with a QA logo. Buyers of bulk quality assured seed may be provided with a QA Bulk Sales Certificate.

OATS

NAME, CITY PHONE NUMBER

Excel - Medium early maturity, high yielding, medium height and strong straw strength. Ivory yellow seed, with good test weight and great percentage. Excel is moderately susceptible to crown rust and loose smut. It has good tolerance to yellow dwarf viruses and is susceptible to stem rust. Selected at Purdue Agricultural Experiment Station and released in 2007. License required for seed production.

Mower County

Grass & Sons Seed, Inc., LeRoy507-324-5820

Wabasha County

Zabel Seeds, Plainview507-534-2498

Newburg - A high yielding oat variety adapted to the North Central states and to the prairie provinces of Canada. Newburg is most similar to HiFi but is resistant to stem rust. Kernels of Newburg are white, fluorescent, medium to large, and midplump. License required through North Dakota Crop Improvement Association for seed production and distribution. PVP(94).

Meeker County

Smith, Steven, Darwin.....320-693-6769

Rockford - A high yielding variety that offers very good lodging resistance. Rockford possesses crown rust and stem rust resistance, is moderately susceptible to stem rust race NA67, and is tolerant to barley yellow dwarf virus. License required through North Dakota Crop Improvement Association for seed production and distribution. PVP (94).

Brown County

Lakeside Seeds, Hanska507-794-7698

Polk County

Fosston Tri-Coop, Fosston.....218-435-6919

Souris - Medium-tall, medium maturity. High yielding, white-hulled cultivar with test weights consistently high enough for premium oat markets. Souris will grow under high moisture and fertility conditions. It has a new source of resistance to prevalent races of crown rust. License required through North Dakota Crop Improvement Association for seed production and distribution. PVP (94).

Brown County

Lakeside Seeds, Hanska507-794-7698

SOYBEANS

201007933 - Relative Maturity 0.7. A conventional soybean variety selected for yellow hilum, early maturity, high protein levels and improved yield. It is moderately susceptible to iron chlorosis on soils with high pH. 201007933 has purple flowers, tan pods, gray pubescence and yellow hila. License and royalty agreement from Global Soy Genetics, LLC required for seed production.

Dakota Select Seed

"Providing the seed for your success"

Dakota Select Seed Objectives:

- To grow, market and distribute seed of crop varieties which are typically grown on a relatively lower number of acres and struggle to maintain a foothold in certified seed industry.
- To benefit the ND Ag Community in the form of consistent access to genetically pure seed of beneficial crop varieties.
- To benefit producers by helping to provide future crop variety improvements through the support of breeding programs.

Dakota Select Seed is a marketing program for varieties licensed to the North Dakota Crop Improvement and Seed Association. For more information on the Dakota Select Seed Program or to learn how to become a grower call 701-231-8168, 701-231-8067 or visit www.ndcropimprovement.org

Newest Variety

Jury Oat (Released Summer 2012)

It presents high yield potential. Good test weight, groat percentage, and dehulling efficiency. It is a high milling quality grain. Second oat cultivar with resistance to prevalent races of both crown and stem rust and resistance to the new stem rust race NA67.

Varieties Currently Available:

Souris Oat

- White-hulled variety
- Excellent yield potential and test weight
- Great rust protection
- Certified and Quality Assured seed available

Rawson Barley

- Two-rowed Feed barley
- Excellent yield potential
- Great Straw strength
- Registered and Certified Seed available

Rockford Oat

Excellent yield potential and test weight. Very good lodging resistant. Good protection against crown and stem rust. Certified and Quality Assured seed available.

Newburn Oat

- Exceptional yield potential
- Average test weight, protein and groat percentage
- Good resistance to the prevalent races of crown and stem rust including the new stem rust race NA67

Overland Winter Wheat

- Good yields and test weight
- Medium height semi-dwarf, with medium maturity
- Very good winter hardiness
- Certified Seed available

Bobcat Winter Triticale

- Semi-prostrate juvenile growth habit
- Medium height with medium early maturity
- Average test and kernel weight
- High protein content
- Resistant to stem rust, powdery mildew and leaf rust

ND901CL PLUS Hard Red Spring Wheat

- Clearfield herbicide-resistant.
- Semidwarf with medium-early maturity.
- Good milling and baking characteristics with high protein levels.
- Resistant to medium-resistant to leaf rust, medium-susceptible to medium-resistant to stem rust, susceptible to scab and medium-susceptible to medium-resistant to other leaf diseases.
- ND 901CL PLUS is recommended for western North Dakota, where disease resistance generally is not as critical

**Certified Seed Doesn't
.....Cost It Pays!!!**

Researching Soybean Profitability

Minnesota's soybean farmers invest in public research to help producers better manage pests, control weeds and increase production. The yield is greater producer profitability.

Find out more about what is being done to benefit Minnesota's soybean farmers at mnsoybeanresearch.org.

APPROVED FACILITY PROGRAM

What is the Approved Facility Program?

MCIA's Approved Facility Program provides an evaluation and approval process for facilities processing and selling seed and identity-preserved (IP) grain products. Facilities processing and/or handling products sold under the seed certification, QA seed and IP grain programs must be inspected and approved by MCIA.

How is a Facility Approved?

To be approved, facilities must meet requirements appropriate for the seed or grain to be processed. Approval is granted on an annual basis for conditioning and handling specific seed types or for processing grain products for specified end uses.

Why Utilize an Approved Facility?

Approved facilities are inspected on a regular basis to determine on-going conformance to requirements necessary to preserve the product identity and quality and adequately process products.

What Should I Look For?

Approved facilities are issued Certificates of Approval annually which are to be prominently posted in their place of business. MCIA also provides Approved Facility signs.

For more information, call MCIA or visit our website at www.mncia.org.

FRESH THINKING. SMART FARMING.

For more than 100 years, Minnesota corn farmers and their families have worked hard to produce high quality crops while preserving land for future generations. Today, ongoing research and good farming practices mean we're farming smarter than ever. Learn more at mncorn.org.

Get ready to grow more.

Biological Enhancements for Soybeans, Corn and Wheat

For Corn and Wheat – SabrEx Root Inoculant with **iGET Technology** has been shown to create a more robust root system, induce resistance to plant stresses and increase water and nutrient efficiency. Available in two formulations.

All the benefits of Excalibre plus the growth stimulant benefits of **SabrEx**.

A specially formulated blend of encapsulated Rhizobia soybean inoculant plus the benefits of **SabrEx**.

A low volume liquid formulation that drastically reduces seed bridging and sticking. It contains three times the Rhizobia and goes on at 1.2 fl.oz. per 100# of seed. Can be used with **Plus 30 Extender** for longer planting windows.

A triple stack Rhizobia strain package for top yield responses. Available in Sterile Liquid 10 Liter, Sterile Liquid 3.1 liter and Sterile Peat. Use with Plus 30 Extender to extend the planting window up to 30 days.

LCS HARD RED SPRING WHEAT

Unparalleled Performance

LCS Iguacu

LCS Albany

LCS Powerplay

LCS Breakaway

This is Not Your Father's Wheat

- Responds well to high management
- Exceptional yield potential
- Excellent disease resistance package

Exceptional Yield, Exceptional Profits!

- Highest yield available
- Short, stiff straw
- Resistance to current strains of Leaf Rust

Well Balanced

- Excellent yield potential
- Good protein content
- Moderate resistance to Fusarium

High Protein

- Good yield potential
- Resistant to current strains of Leaf Rust
- Very good straw strength

or visit us online at www.profile-ind.com to view a video of material separation.*

Sort the Good from the Bad.

Sure, you can tell the difference between seed and chaff. But can you spot a good spiral separator when you see one?

We suggest you start with the company it comes from. At Profile, our commitment to quality and personalized service shines through in all we do -- the superiority of our wide range of separators, the FREE consultation and FREE Lab testing we offer, and the dedication to finding the most effective separator you need to get the job done.

What's more, Profile is ready when you are. We've got the exact spiral separating solution you need today -- in stock and ready to ship! No delays, no empty promises, no kidding.

NATIVE SEED CERTIFICATION

What is Native Seed Certification?

Native plants are often used for re-vegetation of roadsides, construction sites, wildlife plantings and other projects. MCIA's Native Seed Certification Program verifies that the genetic identity of native grasses and forbs (wildflowers) has been maintained through all phases of seed production.

How is Native Seed Certified?

The certification process consists of several steps which include seed source verification, inspection of seed production sites and seed testing. MCIA issues seed labels or certificates to producers whose production has met all certification standards.

Who Produces Native Certified Seed?

Native seed is produced by careful, conscientious growers according to certification standards designed to preserve the genetic identity of native plant species. MCIA surveys producers in the fall and spring to determine availability. The survey results are posted on the MCIA website at www.mncia.org.

Why Buy Certified Native Seed?

Certified native seed provides seed buyers with third party assurance that the genetic identity or source of native grasses and forbs is accurately described on the label.

What Should I Look For?

Three different germplasm types are possible based on the amount of intentional selection that has taken place. They are:

Source Identified, marked with a yellow certification tag.

Selected marked with a green certification tag.

Tested, marked with a blue certification tag.

Alternatively, a Certification Certificate may be provided as proof of certification to buyers of certified native seed.

NOXIOUS WEED SEED FREE FORAGE AND MULCH

What is Noxious Weed Seed Free Forage and Mulch?

This certification program for forage (hay, cubes and pellets) and mulch is designed to limit the spread of noxious weeds. MCIA is designated under Minnesota Law as the official Noxious Weed Seed Free Forage and Mulch Certification Agency in Minnesota. The MCIA program conforms to standards developed by the North American Weed Management Association (NAWMA) which allow properly labeled forage and mulch certified by MCIA to be shipped into restricted areas of the United States and Canada.

How is Noxious Weed Seed Free Forage and Mulch Certified?

Certification requires fields and storage locations to be inspected by MCIA prior to harvest. Labels with unique serial numbers are issued for forage and mulch production meeting certification standards.

Who Produces Certified Noxious Weed Seed Free Forage and Mulch?

It is produced by conscientious growers who are able to produce forage and mulch that meets program standards. MCIA surveys producers in the fall and spring to determine availability. The survey results are posted on the MCIA website at www.mncia.org.

Why Buy Certified Noxious Weed Seed Free Forage and Mulch?

Buyers are provided assurance that forage and mulch certified through this program is free of noxious weed seeds or other propagating parts. In Minnesota, certified mulch is often required for highway roadside plantings and other re-vegetation projects. Many public lands in the western United States require that hay transported into these areas be certified noxious weed free.

What Should I Look For?

For certification to be valid, an official certification label must be attached to each bale of forage or mulch.

For more information, call MCIA or visit our website at www.mncia.org.

QUALITY ASSURED SOD

What is Quality Assured Sod?

The Sod Quality Assurance Program establishes high quality standards for the production and on-going improvement of sod types suitable for installing in challenging environments. The program is a collaborative effort of the Minnesota Turf Association, the University of Minnesota, the Minnesota Department of Transportation (Mn/DOT) and the Minnesota Crop Improvement Association (MCIA).

How is Sod Quality Assured?

To be Quality Assured, sod must meet specific standards including utilizing approved seed mixes, meeting field requirements and maintaining required documentation. The program provides third party assurance to end users to ensure that sod meets specifications and was produced according to rigorous production standards.

Who Produces Quality Assured Sod?

Quality Assured sod is produced by careful, conscientious sod producers who utilize approved seed mixtures and required sod production practices to meet program standards.

Why Utilize Quality Assured Sod?

The first sod type available is salt tolerant sod suitable for use along streets, parking areas and roadsides where saline soil conditions frequently occur. This sod type has been approved by Mn/DOT and will be required where Mn/DOT projects specify salt or shade tolerant sod. It is anticipated that sod products developed through this program will continually evolve and improve as better suited turf seed varieties become available and are utilized to produce sod.

What Should I Look for?

A Sod Quality Assurance Certificate must accompany each sod delivery as proof of conformance to program standards.

QUALITY ASSURED SOD

***All the above sod types are approved for use on Mn/DOT projects requiring Salt Tolerant Sod.**

This listing is current as of October 16, 2013.

This listing will be periodically updated on our website - <http://www.mncia.org/pages/Sodqualityassurance/>

Insist on this certificate for assurance of Salt Tolerant Sod

- Grown from premium quality seed
 - ♦ Selected turf grass varieties
 - ♦ Quality assured seed mixes from approved vendors
- Comprehensive sod production standards
 - ♦ Professionally grown by qualified producers
 - ♦ Stringent sod quality requirements
- Rigorous third party quality assurance process
 - ♦ Seed to harvest oversight
 - ♦ On-site inspections
- Certificate of Assurance with each delivery
 - ♦ Identifies sod that has met all requirements

Program proceeds help fund University of Minnesota research to improve turf and sod performance.

SOD QUALITY ASSURANCE PROGRAM

Developed through a collaboration of:

Minnesota Turf Assn,
University of Minnesota,
Minnesota Department of Transportation and
Minnesota Crop Improvement Assn

Enhancing Value, Improving Marketability

ORGANIC CERTIFICATION SERVICES

Where Does MCIA get its Authority?

MCIA is an Accredited Certifying Agent (ACA) authorized by the USDA National Organic Program (NOP). MCIA is authorized to provide organic certification services to crop, wild crop and livestock producers; handlers and processors.

What is Organic Certification?

Certification is the process whereby a producer or handler is approved by an ACA as being in compliance with the NOP regulations and is then authorized to sell, label, or represent products as being “Certified Organic”.

Who Uses MCIA Organic Certification Services?

Operations certified by MCIA include food processors, distributors, retailers, agricultural handling facilities, wild crop collectors, livestock producers and field crop, vegetable and fruit producers.

Why Use MCIA as your Organic Certifier?

MCIA provides its clients with a user-friendly, efficient, cost-effective certification process. MCIA’s service-oriented staff is available to provide prompt, professional assistance to help organic producers and handlers understand organic program requirements and guide them through the organic certification process.

How Do You Complete Organic Certification?

The Certification process requires an application, inspection and review to determine if a producer or handler is in compliance with the NOP regulations. Upon completion of the process the operation is then authorized to sell, label, or represent products as being “Certified Organic”. All operations must apply and be inspected annually.

For more information, call MCIA or visit our website at www.mciaorganic.org.

ORGANIC SEED USE

There are often questions regarding the requirement for the use of organic seed and other planting stocks in organic production systems. NOP §205.204 states that an organic “producer must use organically grown seeds, annual seedlings, and planting stock, Except, That, (1) Nonorganically produced, untreated seeds and planting stock may be used to produce an organic crop when an equivalent organically produced variety is not commercially available,” and “(4) Nonorganically produced planting stock to be used to produce a perennial crop may be sold, labeled, or represented as organically produced only after the planting stock has been maintained under a system of organic management for a period of no less than 1 year.”

Most certifiers require organic producers to conduct thorough and diligent searches for organic seed before authorizing the use of non-organic seed. Consult the list of producers in this directory to locate seed and to identify seed conditioners that have been certified to process organic seed. However, not all sources of organic seed are listed and it must be understood that seed availability changes throughout the season. Call MCIA if you need assistance in locating organic seed.

It is important to remember that producing high quality seed (whether conventional or organic) requires planning, use of effective production practices and proper handling and conditioning methods. MCIA provides certification, quality assurance and other services for seed producers and conditioners and can provide assistance to those interested in getting started in organic seed production. Contact MCIA for information on seed production practices and requirements. MCIA’s website (www.mncia.org) contains information on MCIA programs and services available to seed producers.

Those wishing to offer organic seed for sale must understand and meet Federal and State seed law labeling and other requirements pertaining to seed in addition to the organic requirements. For information about selling seed in Minnesota, please refer to the following Minnesota Department of Agriculture website: <http://www.mda.state.mn.us/licensing/licensetypes/fmsmrp.aspx>
