HOW MANY DIGITS CAN YOUR YIELD MONITOR DISPLAY?

Wheat breeding is all about the numbers. It takes years of research and thousands of trials to develop an AgriPro® brand wheat variety. But the numbers that really matter are the ones you'll read in your combine. And you'll just have to plant one of these varieties to see how big those numbers can be.

TOP PERFORMERS FOR MINNESOTA

New SY Ingmar

Top Choice for Economic Return

- Very high protein and high yield potential
- Very good disease package including strong Fusarium head blight tolerance plus rust and leaf spot tolerance
- Medium maturity semi-dwarf variety for all hard red spring areas

SY Rowyn

The All-Around Performer

- Strong Fusarium head blight and disease tolerance in a robust hard red spring variety
- Broadly adapted medium-early maturity
- High yield potential

Notice to Buyers

The Minnesota Crop Improvement Association can assume no financial responsibility for seed or other products listed in this Directory or for disagreements over sales which may arise from this list. However, complaints about certified or quality assured products addressed to the Association will be investigated. Claims over seed performance involving the Minnesota Crop Improvement Association must be addressed as provided in the Minnesota Department of Agriculture Rules for Arbitration of Seed Performance Disputes. Inquiries regarding product availability should be directed to producers and conditioners listed. Buyers should insist on proof of conformance (e.g. attachment of certification labels to bags or being provided with a certificate of conformance) when purchasing certified or quality assured products.

ABOUT MCIA

Mission Statement

Minnesota Crop Improvement Association is an organization dedicated to improving the productivity, profitability and competitive position of producers, processors and distributors of agricultural products by providing services to enable them to provide high-quality products to Minnesota, the United States and the World.

Background

Minnesota Crop Improvement Association (MCIA) provides a diverse offering of certification and quality assurance services to a wide array of agricultural and food product producers and handlers. Products certified by MCIA include field crop seed, turf seed, sod, native plant seed, noxious weed seed free forage and mulch, identity-preserved grains for specialty grain markets as well as numerous organic crops, livestock and food products. MCIA also provides customized quality assurance services such as field inspections, seed and grain facility evaluations, as well as other third party audit and on-site evaluations. MCIA produces and distributes Foundation seed of publicly developed crop varieties and serves as the marketing agent for licensing varieties developed at the University of Minnesota.

MCIA is a 501(c)(5) not-for-profit association funded by the fees it charges for the services it provides. MCIA operates from its offices on the St. Paul Campus of the University of Minnesota. MCIA serves its over 500 members with 14 full-time employees including three field supervisors located at various locations throughout the state. In addition, MCIA utilizes nearly 20 part-time employees to assist with field inspections and other seasonal work. MCIA is governed by an 11 member Board of Directors elected from its membership.

The 2014 Board members are:

Duane Dahlman, Cokato, Chairman
Paul Kjolhaug, Willmar, Vice Chairman
Neal Anderson, St. Peter, Secretary
Paul Adams, Wendell, Treasurer

Craig Damstrom, Alexandria
Nancy Jo Ehlke, U of MN, St. Paul
Scott Habstritt, Roseau
Jim Kukowski, Strathcona

Mory Rugg, Fargo, ND
Jay Miller, Shakopee
Mike Zabel, Plainview

History

MCIA has served the agricultural industry in the Upper Midwest for over 100 years. MCIA was founded in 1903 to promote the breeding, growing and distribution of improved field crop varieties developed at the University of Minnesota to crop producers throughout the state. A Directory of members was first published in 1906 and the publication of a list of those with inspected and approved seed began in 1912. In 1955, the Minnesota Seed Law was amended to officially recognize MCIA as the official seed certifying agency of Minnesota. Over the years, MCIA has expanded its programs and related services to meet the needs of its members and the demands of a changing agricultural and food industry. It was formally designated as the official certification agency in Minnesota for noxious weed seed free forage and mulch in 1997 and was accredited as an organic certifier under the National Organic Program in 2002.

As an independent third-party, MCIA strives to provide superior programs and services to meet the needs of today's changing agricultural world.

FOUNDATION SEED

What is Foundation Seed?

Foundation seed is the initial generation of seed in the seed certification program. Foundation seed of crop varieties is planted by seed growers to produce Registered and Certified class seed.

How is Foundation Seed Produced?

The MCIA Foundation Seed Program operates under an agreement with the University of Minnesota Agricultural Experiment Station to increase, maintain, and distribute Foundation seed of new and established publicly developed varieties. MCIA cooperates closely with the University of Minnesota plant breeding programs in soybeans, wheat, barley, oats and grasses. MCIA also cooperates with similar organizations in neighboring states to supply varieties developed by other public plant breeding programs.

Who is Eligible to Purchase Foundation Seed?

Foundation seed is available to MCIA members who have previous history producing seed in the certification program. Eligible producers are notified of varieties available and procedures for ordering seed.

What Should I Look for?

A Foundation Seed certification label must be attached to each container. For seed sold in bulk, a Bulk Seed Sales Certificate must accompany each load of seed.

Lot RB14012
14-12345

Contact MCIA for a list of available varieties or to buy Foundation Seed.

VARIETY LICENSING

What is Variety Licensing?

Minnesota Crop Improvement Association (MCIA) is the licensing agent for agronomic crops developed at the University of Minnesota. Plant breeders at the University continue to develop new varieties of soybeans, wheat, barley, oats and grasses. MCIA serves as the primary point of contact for producers and processors interested in new Minnesota varieties.

Why are Some Varieties Licensed?

Crop varieties that are suitable for large scale commercial production are released as public varieties through the traditional Foundation seed distribution program. However, many recent releases are food grade or special use varieties that require unique production and handling capabilities or access to specialty markets.

Who is Eligible to License Varieties?

Producers or companies that can demonstrate their capability to successfully produce and commercialize products of the type to be licensed will be considered as licensing partners to the University.

How are Varieties Licensed?

MCIA provides a Material Transfer Agreement (MTA) which allows an individual or company to evaluate the agronomic traits and to assess the potential for commercialization. Parties interested in licensing can submit a proposal for licensing to MCIA. Proposals are reviewed based on criteria established to identify licensing partners most appropriate for the variety being released.

For more information, call MCIA or visit our website at www.mncia.org.

PLANT VARIETY PROTECTION

The developer of a new distinct variety may obtain protection for that variety, provided the variety meets the requirements of the Plant Variety Protection Act (PVPA). A certificate is provided to the developer of a variety which grants exclusive rights for reproducing and marketing the seed. The PVPA is administered by the United States Department of Agriculture.

Many of the varieties listed in this publication have either a Certificate of Plant Variety Protection (PVP) issued to them or an application has been made for Plant Variety Protection. PVP - Title V specifies seed be sold by variety name only as a class of certified seed. If a variety is not protected with the Title V option, the owner of the variety still has the exclusive right to determine who can produce and market the variety as a seed product.

PVP protected varieties, maybe saved for your own planting only; you may not sell seed to a neighbor without specific permission of the certificate holder.

Varieties listed on the following page were commonly grown in Minnesota in the last few years. Additions or deletions may occur at any time. It is the responsibility of the buyer and seller to confirm the PVP status of a crop variety before buying or selling a specific variety. It is illegal for anyone to purchase “grain” of a protected variety and utilize it for planting purposes.

This is not an all inclusive list. There are many varieties not listed that are protected by PVP. Call MCIA if you are unsure of a variety’s PVP status or check the status on the internet at www.ars-grin.gov/cgi-bin/npgs/html/pvplist.pl.

Listed below are types of protections and the appropriate PVP statements.

VARIETIES FOR WHICH PROTECTION IS CONTEMPLATED OR IS APPLIED FOR

CERTIFIED SEED

What is Seed Certification?

Seed certification is an internationally recognized system to preserve the genetic identity and purity of crop varieties.

How is Seed Certified?

Seed certification requires planting eligible seedstocks, field inspection of the growing crop, proper conditioning, representative sampling, thorough laboratory analysis, and proper labeling.

Who Produces Certified Seed?

Certified seed is produced by careful, conscientious growers, according to seed certification standards. Seed certification standards and procedures are available from MCIA.

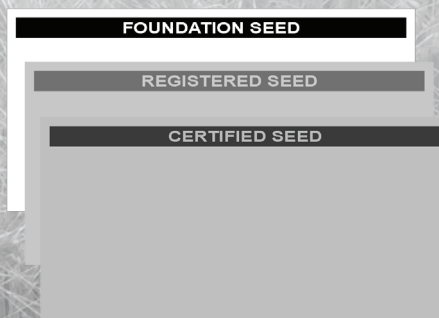

Why buy Certified Seed?

Seed certification procedures provide the best possible third party assurance of good quality seed of known identity and purity.

What Should I Look for?

For certification to be valid, buyers must be provided proof of certification. Seed containers must bear an official certification label. Bulk seed sales must be accompanied by a Bulk Seed Sales Certificate.

		Reg	Cert

Conlon - Two-rowed spring barley developed for western North Dakota. Early maturity, high test weight, leaf disease resistance. Resistant to net blotch and powdery mildew. Moderately susceptible to spot blotch and Fusarium head blight. Susceptible to loose smut, leaf rust, septoria, scald, barley yellow dwarf virus, and QCCJ pathotype of wheat stem rust. Classified as a malting variety by AMBA. Released by North Dakota Agricultural Experiment Station in 1996. PVP(94) Title V.

BARLEY

NAME, CITY	PHONE NUMBER	ACREAGE	
		Reg	Cert

Pinnacle - A two-rowed barley with long rachilla hairs, medium-late maturity, medium height and strong straw strength. It has lower protein than Conlon and higher percentage of plump kernels. Pinnacle is moderately resistant to spot blotch but susceptible to loose smut and stem rust. It is an AMBA recommended malting barley variety. Released by North Dakota Agricultural Experiment Station in 2006. License required for seed production. PVP (94) Title V.

Marshall County

Farmers Elev. Co. of Alvarado, Alvarado	218-965-4812	240	
--	--------------	-----	--

Roseau County

Manna Farms, Lancaster	218-782-3777	300	
------------------------------	--------------	-----	--

Quest - A six-rowed malting barley with improved Fusarium head blight resistance and lower mycotoxin (DON) levels. Quest has a semi-smooth awn, white aluerone and long rachilla hair. It is about the same height as Robust, but taller than Lacey with yield and grain protein levels similar to Tradition and Lacey. Selected by AMBA as a recommended malting variety in December 2010. Released by Minnesota Agricultural Experiment Station in 2010. License required for seed production. PVP(94) Title V.

Kittson County

Johnson Farms, Inc., Lloyd, Karlstad	218-436-2817	110	
---	--------------	-----	--

Marshall County

Bakke, Deland, Newfolden	218-874-7911	455	
--------------------------------	--------------	-----	--

Rasmusson - High yielding variety with improved malting quality characteristics. It is six-row, semi-smooth awn, white aleurone variety with good kernel plumpness. Rasmusson is shorter than most current six-rowed malting varieties in the Midwest. It has performed well in Minnesota and North Dakota yield trials. It has good lodging resistance; resistance to spot blotch and is similar to Robust for scab reaction. Rasmusson is an AMBA recommended malting barley variety. Released by the Minnesota Agricultural Experiment Station in 2008. License required for seed production. PVP(94) Title V.

Tradition - Six-row, medium-early maturity variety. It is medium-short in height and has very strong straw. Tradition has a nodding head type, semi-smooth awns, long rachilla hairs and white aleurone. Tradition has excellent agronomic performance and malt quality, and is well adapted to Minnesota, North Dakota, Idaho and Montana. Classified as a malting variety by AMBA and developed by Busch Agricultural Resources. License required for seed production. PVP(94) Title V.

Clay County

Fox, Timothy, Borup	701-793-2508	90
Olek, Bradley, Felton	218-494-3440	156

BIG BLUESTEM

Bison - Early maturity, well-adapted to northern climates. Uniform plant type, grows 3 to 6 feet tall. Good leafiness, high plant vigor and seed yield, high in forage quality. No Registered class. Released by North Dakota and Minnesota Agricultural Experiment Stations and USDA-ARS/USDA-SCS in 1989.

Kittson County

Carlson Prairie Seed Farm, Inc., Lake Bronson	218-754-2693	
--	--------------	--

FIELD PEAS

Matrix - A late maturing green field pea with good standability and powdery mildew resistance. Seed size is large with a very high yield potential. With bleaching and/or dimpling a possibility, Matrix may not always meet edible grade requirements. Adapted to a broad area but performs best in high-yielding eastern environments. Released by Limagrain Advanta Nederland B.V. PVP(94) Title V.

Otter Tail County

Leaderbrand Bros., New York Mills	218-385-3656	40
--	--------------	----

FIELD PEAS

NAME, CITY	PHONE NUMBER	ACREAGE

Viper - A green field pea that displays a smooth seed coat and enhanced bleach tolerance. Viper has above average standability, early maturity and high yields. Developed by Limagrain Europe S.A. PVP (94) Title V.

Otter Tail County

Leaderbrand Bros., New York Mills	218-385-3656	7
--	--------------	---

KENTUCKY BLUEGRASS

Park - Excellent seedling vigor, moderate resistance to rust, susceptible to mildew. Good forage and seed producer. Makes tough, durable sod. Released by the Minnesota Agricultural Experiment Station in 1957.

Roseau County

Erickson, Douglas, Roseau	218-463-3535	190
Habstritt Farms, Inc., Roseau	218-463-1193	20 470

OATS

126 - A true spring forage oat with dark green foliage, erect growth habit and very good standability. A delayed-heading oat, much of its forage mass and quality come from an extended maturity. Biomass accumulation is extraordinary. 126 has shown resistance to rust and most other leaf and stem diseases, but is susceptible to barley yellow dwarf virus. Released by ProGene LLC. PVP(94).

Freeborn County

Albert Lea Seed House, Inc., Albert Lea	507-373-3161	80
--	--------------	----

Badger - An early-maturing, high-yielding oat line. The heading date for Badger is similar to Kame. It is similar in height to Kame but has much better straw strength. Badger is a yellow oat with very good test weight. It has a good crown rust rating and is resistant to smut. Barley yellow dwarf virus tolerance is similar to other early varieties. Released by the Wisconsin Agricultural Experiment Station in 2010. No Registered class. License required for seed production. PVP (94).

OATS

NAME, CITY	PHONE NUMBER	ACREAGE	
		Reg	Cert

Beach - Relatively late maturing and heads about the same time as Morton. Beach is similar in height to Morton and has good straw strength and lodging resistance. Beach has high yield, very stable and high test weight, and has relatively large, white-hulled kernels. Beach was released by the North Dakota Agricultural Experiment Station in 2004. License required for seed production. PVP (94).

Renville County

Enstvedt Bros., Sacred Heart320-765-2728 30

Rice County

Werner Farm Seed, Dundas507-645-7995 31

Colt - An early maturing variety, heading 1-2 days earlier than Kame with good yield potential. Colt is a white oat with high test weight superior to Kame and Stallion. It is medium short with good lodging resistance. Crown rust rating for Colt is better than Kame with a comparable rating for barley yellow dwarf virus. Released in 2009 by the South Dakota Agricultural Experiment Station. License required for seed production. PVP (94) Title V.

Mower County

Researching Soybean Profitability

Minnesota's soybean farmers invest in public research to help producers better manage pests, control weeds and increase production. The yield is greater producer profitability.

Find out more about what is being done to benefit Minnesota's soybean farmers at mnsoybean.org.

Norden - A consistently good yield with high test weight and very good straw strength. It is a medium maturity variety similar to Faller. It has improved leaf rust resistance, because its resistance is not based on the Lr21 gene, which is common in several other varieties. Norden also has good stem rust resistance and it is moderately resistant to scab, similar to Prosper. Protein levels are similar to Prosper with acceptable milling and baking qualities. License required for seed production. PVP(94) Title V.

Prosper - A hard red spring wheat variety adapted to eastern North Dakota and western Minnesota. Prosper is intended to provide growers with a very high yielding variety that includes an overall good leaf disease package. It has medium straw strength, semi-dwarf height, with an early to medium-early maturity. Protein is similar or slightly better than Faller with excellent milling and baking properties. Prosper is moderately resistant to scab and leaf and stem rusts. A joint release from North Dakota and Minnesota in spring 2011. License required for seed production. PVP(94) Title V.

RB07 - Early, semi-dwarf hard red spring wheat. A high yielding variety that has been consistently above average across all Minnesota locations. The heading date is similar to Oxen. It is medium height with moderately strong straw. It has above average protein and medium test weight. RB07 has shown good resistance to Fusarium head blight. It has excellent leaf and stem disease resistance. It is resistant to pre-harvest sprouting with good falling numbers and medium high baking qualities. Released by the Minnesota Agricultural Experiment Station. License required for seed production. PVP(94) Title V.

Rollag - A unique combination of highest available resistance to Fusarium head blight (scab), strong straw and yield. The scab rating for Rollag is equal to Glenn and Brick but Rollag has better yield. It is a medium maturity variety with above average protein and test weight. It is comparable to Barlow for yield but has much better straw strength. It is resistant to stem rust, with moderate resistance to leaf rust and moderate resistance to other leaf diseases. Released by the Minnesota Agricultural Experiment Station in 2011. License required for seed production. PVP(94) Title V.

SPRING WHEAT

NAME, CITY	PHONE NUMBER	ACREAGE	
		Reg	Cert

WB-Digger - A medium height, medium maturity, semi-dwarf hard red spring wheat. It is moderately resistant to the prevalent races of leaf rust and foliar disease but is susceptible to scab. WB-Digger is a very high yielding variety with good standability. Protein and test weight are medium and bread-baking characteristics are good. In areas where scab is a problem, fungicide treatment is recommended. Released by WestBred LLC in 2009. PVP (94).

Swift County

Lee's Seed Farm, Benson.....320-843-2857

WB-Mayville - A short-statured, semi-dwarf, early-maturing variety with excellent standability and yield potential with good test weight and very good protein. Quality of WB-Mayville is good based on protein content and flour SDS sedimentation values (a measure of gluten strength). Released by WestBred LLC in 2011. PVP (94).

J&J Corporation, Inc.

WINTER WHEAT

Arapahoe - A hard red winter wheat, awned, white-chaffed, medium-early, medium height. Moderately good lodging resistance, relatively high in kernel protein and test weight. Moderately resistant to current prevalent races of leaf and stem rust, moderately tolerant of Cephalosporium stripe. Released by Nebraska Agricultural Experiment Station in 1988.

McLeod County

Thalman Seeds, Inc., Plato.....320-238-2185

35

Branson - A soft red winter wheat bred and developed by AgriPro Wheat. A medium height, semi-dwarf variety with good straw strength. Branson is moderately resistant to Septoria leaf blotch, stripe rust, and powdery mildew, with intermediate resistance to soil-borne mosaic virus and leaf rust. Primary adaptation is the wheat growing regions of Missouri, Illinois, Indiana, Michigan, and Ohio. PVP(94) Title V.

WINTER WHEAT

NAME, CITY	PHONE NUMBER	ACREAGE	
		Reg	Cert

CDC Falcon - Semi-dwarf hard red winter wheat, with high yield potential. CDC Falcon has good winter hardiness. It is a short variety with very good straw strength. CDC Falcon has good stem and leaf rust resistance. It has average protein and test weight. Released in the United States by Western Plant Breeders. PVP (94).

Polk County

AgriMAX, Fisher.....218-891-2211

Darrell - A hard red winter wheat with medium maturity. Similar height to Arapahoe with better straw strength than Arapahoe. Winter survival has shown to be excellent. Yield potential is extremely high. It has good milling and average baking quality. It is resistant to stem rust and is moderately susceptible to leaf rust. It is moderately susceptible to wheat streak mosaic virus. It has good resistance to scab. It has shown good resistance to leaf spotting diseases. Developed by South Dakota Agricultural Experiment Station and released by SDAES and the Nebraska Agricultural Experiment Station in 2006. License required for seed production. PVP(94) Title V.

Norman County

Star of the North, Gary218-356-8300 55

Expedition - Hard red winter wheat, awned, white-chaffed, early maturing, semi-dwarf. Plant height is short, winter hardiness is rated good-excellent. Straw strength is fair. Is rated resistant to prevalent races of stem rust, however, is moderately susceptible to leaf rust. Exhibits some tolerance to head scab but is susceptible to tan spot and Hessian fly and had an intermediate reaction to soil-borne mosaic virus. End-use characteristics are rated acceptable overall. Released by South Dakota Agricultural Experiment Station in 2003. PVP(94) Title V.

Freeborn County

Albert Lea Seed House, Inc.,
Albert Lea507-373-3161 117

WINTER WHEAT

NAME, CITY	PHONE NUMBER	ACREAGE	
		Reg	Cert

Ideal - A hard red winter wheat with high grain yield and adaptation to the northern winter wheat production area. It exhibits average to good milling and baking qualities, good winter hardiness and excellent resistance to lodging. Ideal is moderately susceptible to stripe rust and susceptible to head scab, but it exhibits moderate resistance to tan spot, leaf and stem rust. Released by the South Dakota Agricultural Experiment Station in 2011. License required for seed production. PVP(94) Title V is applied for.

Freeborn County

Albert Lea Seed House, Inc.,
Albert Lea507-373-3161 20

NE01643 (Husker Genetics Overland Brand) - An awned, semi-dwarf hard red winter wheat, with moderate winter hardiness. It is medium height with good straw strength. It has average test weight and good protein. It is moderately resistant to leaf rust, stripe rust, and Hessian fly. Husker Genetics Brand Overland also is more tolerant to Fusarium head blight than many widely grown lines. Husker Genetics Brand Overland was developed cooperatively by the Nebraska Agricultural Experiment Station and the USDA-ARS. A license is required for seed production. Husker Genetics Brand Overland has no saleable registered class it can only be sold as certified seed. PVP(94) Title V.

Meeker County

Smith, Steven, Darwin320-693-6769 20

WB-Matlock - A winter wheat that is well-adapted to the Northern plains. Released by WestBred LLC in 2010. PVP (94).

QUALITY ASSURED SEED

What is Quality Assured Seed?

Quality Assured (QA) seed has met standards designed to preserve the purity and identity of a crop variety. Standards, similar to seed certification, enable a company to produce and market seed according to sound quality management practices.

How is Seed Quality Assured?

The quality assurance process includes field inspections, laboratory testing, audits of production records, and on-site evaluations of conditioning and treatment facilities. Seed meeting all requirements is eligible to be labeled with the AOSCA QA logo.

Who Produces Quality Assured Seed?

Seed producers of all crop types may utilize a QA program to access a complete service for seed sold as varieties, hybrids, brands or blends. QA programs can be customized to support an existing quality management system or as part of an AOSCA program.

Why buy Quality Assured Seed?

Quality Assured seed provides assurance to seed buyers that the seed is of known purity and quality as verified by an unbiased third-party.

What Should I Look for?

Seed meeting QA standards may bear a Quality Assurance label or be marked with a QA logo. Buyers of bulk quality assured seed may be provided with a QA Bulk Sales Certificate.

OATS

NAME, CITY	PHONE NUMBER
------------	--------------

Excel - Medium early maturity, high yielding, medium height and strong straw strength. Ivory yellow seed, with good test weight and groat percentage. Excel is moderately susceptible to crown rust and loose smut. It has good tolerance to yellow dwarf viruses and is susceptible to stem rust. Selected at Purdue Agricultural Experiment Station and released in 2007. License required for seed production.

Mower County

Grass & Sons Seed, Inc., LeRoy.....507-324-5820

Souris - Medium-tall, medium maturity. High yielding, white-hulled cultivar with test weights consistently high enough for premium oat markets. Souris will grow under high moisture and fertility conditions. It has a new source of resistance to prevalent races of crown rust. License required through North Dakota Crop Improvement Association for seed production and distribution. PVP (94).

APPROVED FACILITY PROGRAM

What is the Approved Facility Program?

MCIA's Approved Facility Program provides an evaluation and approval process for facilities processing and selling seed and identity-preserved (IP) grain products. Facilities processing and/or handling products sold under the seed certification, QA seed and IP grain programs must be inspected and approved by MCIA.

How is a Facility Approved?

To be approved, facilities must meet requirements appropriate for the seed or grain to be processed. Approval is granted on an annual basis for conditioning and handling specific seed types or for processing grain products for specified end uses.

Why Utilize an Approved Facility?

Approved facilities are inspected on a regular basis to determine on-going conformance to requirements necessary to preserve the product identity and quality and adequately process products.

What Should I Look For?

Approved facilities are issued Certificates of Approval annually which are to be prominently posted in their place of business. MCIA also provides Approved Facility signs.

For more information, call MCIA or visit our website at www.mncia.org.

NOXIOUS WEED SEED FREE FORAGE AND MULCH

What is Noxious Weed Seed Free Forage and Mulch?

This certification program for forage (hay, cubes and pellets) and mulch is designed to limit the spread of noxious weeds. MCIA is designated under Minnesota Law as the official Noxious Weed Seed Free Forage and Mulch Certification Agency in Minnesota. The MCIA program conforms to standards developed by the North American Weed Management Association (NAWMA) which allow properly labeled forage and mulch certified by MCIA to be shipped into restricted areas of the United States and Canada.

How is Noxious Weed Seed Free Forage and Mulch Certified?

Certification requires fields and storage locations to be inspected by MCIA prior to harvest. Labels with unique serial numbers are issued for forage and mulch production meeting certification standards.

Who Produces Certified Noxious Weed Seed Free Forage and Mulch?

It is produced by conscientious growers who are able to produce forage and mulch that meets program standards. MCIA surveys producers in the fall and spring to determine availability. The survey results are posted on the MCIA website at www.mncia.org.

Why Buy Certified Noxious Weed Seed Free Forage and Mulch?

Buyers are provided assurance that forage and mulch certified through this program is free of noxious weed seeds or other propagating parts. In Minnesota, certified mulch is often required for highway roadside plantings and other re-vegetation projects. Many public lands in the western United States require that hay transported into these areas be certified noxious weed free.

What Should I Look For?

For certification to be valid, an official certification label must be attached to each bale of forage or mulch.

For more information, call MCIA or visit our website at www.mncia.org.

Certified Seed Doesn't Cost...

It Pays!

▲ PROVEN QUALITY

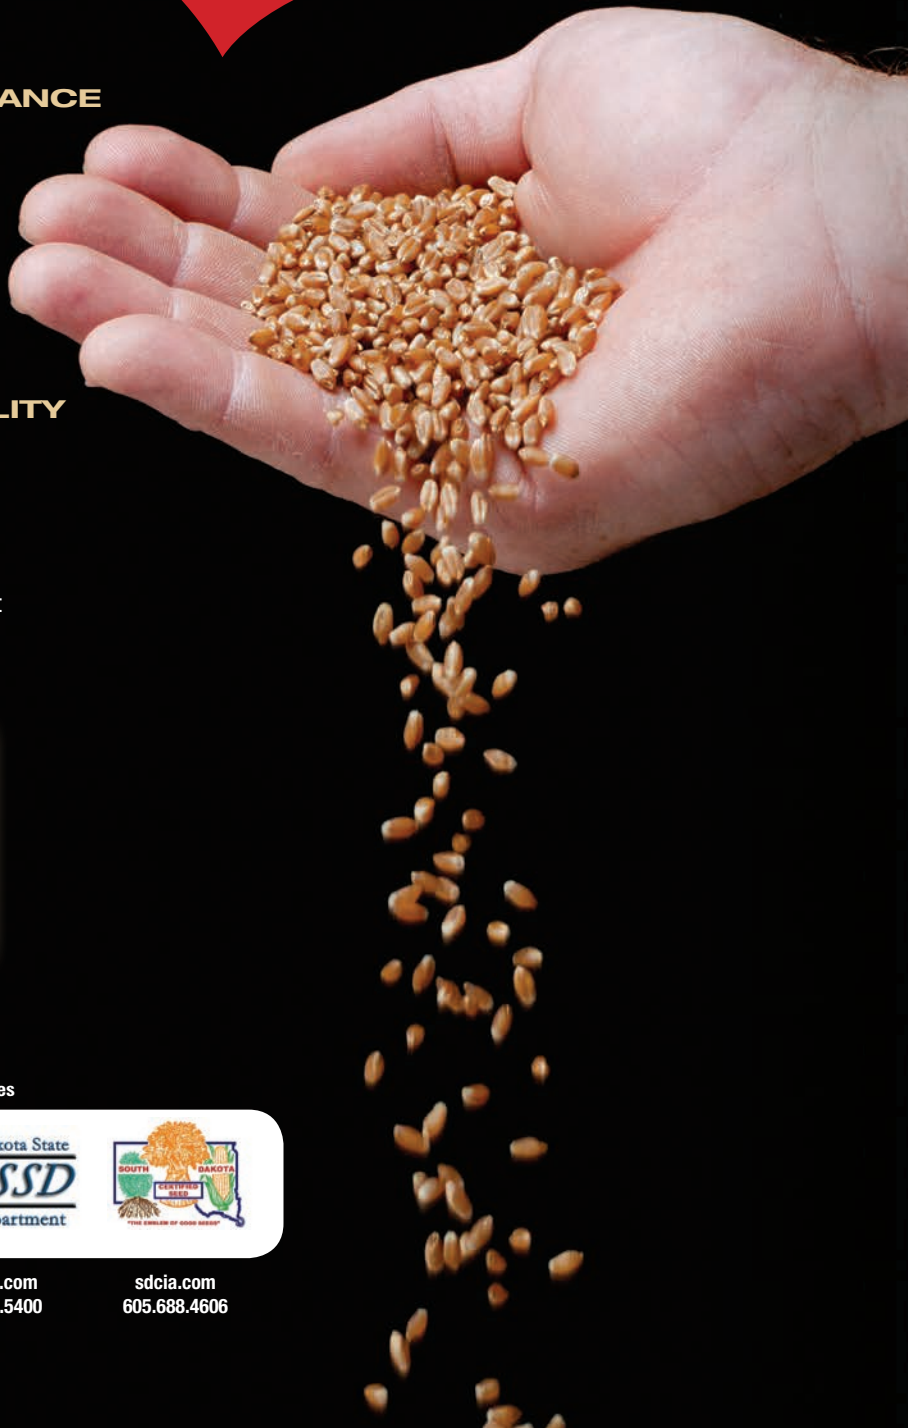

- High germination
- Fewer weed seeds
- Less inert matter
- Less seed-borne disease
- Known varieties

▲ SUPERIOR PERFORMANCE

- Better plantability
- Rapid stand establishment
- More uniform maturity
- Easier harvest
- Less dockage

▲ GREATER PROFITABILITY

- Newest genetics
- Less weed control costs
- Less disease control costs
- Greater yield per acre
- More return on your investment

or visit us online at www.profile-ind.com to view a video of material separation.*

Sort the Good from the Bad.

Sure, you can tell the difference between seed and chaff. But can you spot a good spiral separator when you see one?

We suggest you start with the company it comes from. At Profile, our commitment to quality and personalized service shines through in all we do -- the superiority of our wide range of separators, the FREE consultation and FREE Lab testing we offer, and the dedication to finding the most effective separator you need to get the job done.

What's more, Profile is ready when you are. We've got the exact spiral separating solution you need today -- in stock and ready to ship! No delays, no empty promises, no kidding.

Dakota Select Seed

“Providing the seed for your success”

Dakota Select Seed Objectives:

- To grow, market, and distribute seed of crop varieties which are typically grown on a relatively lower number of acres and struggle to maintain a foothold in certified seed industry.
- To benefit the ND Ag Community in the form of consistent access to genetically pure seed of beneficial crop varieties.
- To benefit producers by helping to provide future crop variety improvements through the support of breeding programs.

Dakota Select Seed is a marketing program for varieties licensed to the North Dakota Crop Improvement and Seed Association.

For more information on the Dakota Select Seed Program or to learn how to become a grower call Gonzalo Rojas (Program Coordinator) at 701-231-8168, Toni Muffenbier at 701-231-8067, or visit www.ndcropimprovement.org

Newest Varieties

ND1406HP Soybean (Released Spring 2014)

ND1406HP is a conventional (non-GMO) type intended for the specialty high protein, tofu, or soy milk markets. However ND1406HP performs very well as a conventional soybean. In these areas it presents better yields and better quality than other NDSU varieties, while also performing very well as a conventional soybean. ND1406HP has purple flower color, gray pubescence, yellow hila with dull seed coat luster, and brown pod color. ND1406HP is a variety of 0.6 maturity that would be best adapted to North Dakota counties such as Traill, Cass, and Richland along with Minnesota counties such as Norman, Wilkin, and Clay.

Gold ND Yellow Flax (Released Spring 2014)

Gold ND is a yellow-seeded variety with very high yield potential. Gold ND has good oil content and oil drying quality. This variety has blue flowers and medium seed size. Gold ND is resistant to rust and has good tolerance to wilt. It is adapted to the north-central flax-growing region. Gold ND foundation seed will be available on the spring of 2015.

Varieties Currently Available:

Oat

- Souris
- Rockford
- Newburg
- Jury

Barley

- Rawson

Winter Wheat

- Overland
- Freeman

Triticale

- Bobcat

Upgrade Your Wheat Portfolio

LCS Nitro

Supercharge Your Wheat Acres

- Exceptional yield potential
- Shorter stiff straw
- Excellent high management candidate
- Medium-early maturity

LCS Iguacu

Give Your Bottom Line A Global Advantage

- Targeted for high management growers
- Exceptional yield and test weight
- Excellent straw strength
- Superior resistance to Fusarium head blight

LCS Powerplay

Gives You the Advantage

- Excellent yield potential
- Good protein content
- Medium-early maturity

LCS Breakaway

High Protein Content

- High protein wheat
- Good yield potential
- Resistant to current strains of leaf rust

Albany

Exceptional Yield, Exceptional Profits!

- Exceptional Minnesota yield potential
- Excellent gross returns
- High tillering capacity

Take Control Of Your Commodity Cleaning

With Crippen Processing Equipment And Expert Project Design From Bjerke Brothers!

Here at Bjerke Brothers, we make it simple to put together your own processing facility for cleaning everything from beans to grain. Not only do we offer legendary Crippen equipment like air/screen cleaners, gravity tables and length graders, but also high-capacity equipment for terminals and large-scale facilities. Best of all, our experienced team can put everything together for you. We'll design the site, manage the project, source and integrate the equipment into a custom processing line, install and commission the equipment, train your operators and finally, provide service after your facility is operational.

**Control starts here.

MCIA Certified Forage & Mulch and Native Seed Programs

612-625-7766 / 800-510-6242 / Email: mncia@mncia.org / www.mncia.org
Enhancing Value, Improving Marketability

NATIVE SEED CERTIFICATION

What is Native Seed Certification?

Native plants are often used for re-vegetation of roadsides, construction sites, wildlife plantings and other projects. MCIA's Native Seed Certification Program verifies that the genetic identity of native grasses and forbs (wildflowers) has been maintained through all phases of seed production.

How is Native Seed Certified?

The certification process consists of several steps which include seed source verification, inspection of seed production sites and seed testing. MCIA issues seed labels or certificates to producers whose production has met all certification standards.

Who Produces Native Certified Seed?

Native seed is produced by careful, conscientious growers according to certification standards designed to preserve the genetic identity of native plant species. MCIA surveys producers in the fall and spring to determine availability. The survey results are posted on the MCIA website at www.mncia.org.

Why Buy Certified Native Seed?

Certified native seed provides seed buyers with third party assurance that the genetic identity or source of native grasses and forbs is accurately described on the label.

What Should I Look For?

Three different germplasm types are possible based on the amount of intentional selection that has taken place. They are:

Source Identified, marked with a yellow certification tag.

Selected marked with a green certification tag.

Tested, marked with a blue certification tag.

Alternatively, a Certification Certificate may be provided as proof of certification to buyers of certified native seed.

QUALITY ASSURED SOD

What is Quality Assured Sod?

The Sod Quality Assurance Program establishes high quality standards for the production and on-going improvement of sod types suitable for installing in challenging environments. The program is a collaborative effort of the Minnesota Sod Producers Association, the University of Minnesota, the Minnesota Department of Transportation (Mn/DOT) and the Minnesota Crop Improvement Association (MCIA).

How is Sod Quality Assured?

To be Quality Assured, sod must meet specific standards including utilizing approved seed mixes, meeting field requirements and maintaining required documentation. The program provides third party assurance to end users to ensure that sod meets specifications and was produced according to rigorous production standards.

Who Produces Quality Assured Sod?

Quality Assured sod is produced by careful, conscientious sod producers who utilize approved seed mixtures and required sod production practices to meet program standards.

Why Utilize Quality Assured Sod?

The first sod type available is salt tolerant sod suitable for use along streets, parking areas and roadsides where saline soil conditions frequently occur. This sod type has been approved by Mn/DOT and will be required where Mn/DOT projects specify salt or shade tolerant sod. It is anticipated that sod products developed through this program will continually evolve and improve as better suited turf seed varieties become available and are utilized to produce sod.

What Should I Look for?

A Sod Quality Assurance Certificate must accompany each sod delivery as proof of conformance to program standards.

MCIA CERTIFICATE OF SOD QUALITY ASSURANCE

***All the above sod types are approved for use on Mn/DOT projects requiring Salt Tolerant Sod.**

This listing is current as of October 7, 2014.

This listing will be periodically updated on our website - <http://www.mncia.org/pages/sod-quality-assurance>

SOD QUALITY ASSURANCE PROGRAM

Developed through a collaboration of:

- MN Sod Producers Assn,
- University of Minnesota,
- Minnesota Department of Transportation and
- Minnesota Crop Improvement Assn

For more information or for a list of producers contact:

MN Crop Improvement Assn
1900 Hendon Avenue
Saint Paul, MN 55108

612-625-7766
mncia@mncia.org
www.mncia.org

Insist on this certificate for assurance of Salt Tolerant Sod

- Grown from premium quality seed
 - ♦ Selected turf grass varieties
 - ♦ Quality assured seed mixes from approved vendors
- Comprehensive sod production standards
 - ♦ Professionally grown by qualified producers
 - ♦ Stringent sod quality requirements
- Rigorous third party quality assurance process
 - ♦ Seed to harvest oversight
 - ♦ On-site inspections
- Certificate of Assurance with each delivery
 - ♦ Identifies sod that has met all requirements

Program proceeds help fund University of Minnesota research to improve turf and sod performance.

Enhancing Value, Improving Marketability

ORGANIC CERTIFICATION SERVICES

Where Does MCIA get its Authority?

MCIA is an Accredited Certifying Agent (ACA) authorized by the USDA National Organic Program (NOP). MCIA is authorized to provide organic certification services to crop, wild crop and livestock producers; handlers and processors.

What is Organic Certification?

Certification is the process whereby a producer or handler is approved by an ACA as being in compliance with the NOP regulations and is then authorized to sell, label, or represent products as being “Certified Organic”.

Who Uses MCIA Organic Certification Services?

Operations certified by MCIA include food processors, distributors, retailers, agricultural handling facilities, wild crop collectors, livestock producers and field crop, vegetable and fruit producers.

Why Use MCIA as your Organic Certifier?

MCIA provides its clients with a user-friendly, efficient, cost-effective certification process. MCIA’s service-oriented staff is available to provide prompt, professional assistance to help organic producers and handlers understand organic program requirements and guide them through the organic certification process.

How Do You Complete Organic Certification?

The Certification process requires an application, inspection and review to determine if a producer or handler is in compliance with the NOP regulations. Upon completion of the process the operation is then authorized to sell, label, or represent products as being “Certified Organic”. All operations must apply and be inspected annually.

For more information, call MCIA or visit our website at www.mciaorganic.org.

ORGANIC SEED USE

There are often questions regarding the requirement for the use of organic seed and other planting stocks in organic production systems. NOP §205.204 states that an organic “producer must use organically grown seeds, annual seedlings, and planting stock, Except, That, (1) Nonorganically produced, untreated seeds and planting stock may be used to produce an organic crop when an equivalent organically produced variety is not commercially available,” and “(4) Nonorganically produced planting stock to be used to produce a perennial crop may be sold, labeled, or represented as organically produced only after the planting stock has been maintained under a system of organic management for a period of no less than 1 year.”

Most certifiers require organic producers to conduct thorough and diligent searches for organic seed before authorizing the use of non-organic seed. Consult the list of producers in this directory to locate seed and to identify seed conditioners that have been certified to process organic seed. However, not all sources of organic seed are listed and it must be understood that seed availability changes throughout the season. Call MCIA if you need assistance in locating organic seed.

It is important to remember that producing high quality seed (whether conventional or organic) requires planning, use of effective production practices and proper handling and conditioning methods. MCIA provides certification, quality assurance and other services for seed producers and conditioners and can provide assistance to those interested in getting started in organic seed production. Contact MCIA for information on seed production practices and requirements. MCIA’s website (www.mncia.org) contains information on MCIA programs and services available to seed producers.

Those wishing to offer organic seed for sale must understand and meet Federal and State seed law labeling and other requirements pertaining to seed in addition to the organic requirements. For information about selling seed in Minnesota, please refer to the following Minnesota Department of Agriculture website: <http://www.mda.state.mn.us/licensing/licensetypes/fsmsrp.aspx>

www.mciaorganic.org
1-855-213-4461

The advertisement features a background of several apples covered in water droplets. In the top left, the MCIA Organic logo is displayed, consisting of a stylized leaf icon and the text 'MCIA' with a trademark symbol above 'Organic'. To the right of this, the slogan 'Service Second to None' is written in a bold, italicized font. In the center, there are two circular logos: one for 'MCIA Certified Organic' and another for 'USDA ORGANIC'. At the bottom, the text 'Your Local Certifier' is written in a bold, italicized font, followed by the website 'www.mciaorganic.org' and the phone number '1-855-213-4461' in a bold font.

A photograph of a man and a young child looking out over a field at sunset. The man is on the left, looking towards the right. The child is in the center, also looking towards the right. The background is a blurred field with a warm sunset glow.

FRESH THINKING. SMART FARMING.

Marcus and Edwin
Welcome, MN

For more than 100 years, Minnesota corn farmers and their families have worked hard to produce high quality crops while preserving land for future generations. Today, ongoing research and good farming practices mean we're farming smarter than ever. Learn more at mncorn.org.
