Some companies meet standards.

# WE SET THE STANDARD IN SEED SORTING TECHNOLOGY.

Sure, you can tell the difference between seed and chaff. But can you spot a good spiral separator when you see one?

**We can...because it has our name on it.**

Our commitment to quality and personalized service shines through in all we do.

We succeed when you succeed, and we'll do whatever it takes to make that happen. So take advantage of our:

- Free Consultations
- Free Lab Analysis
- In Stock Spiral Separators
- Innovative New Products

Lets find out what we can do together.

## Notice to Buyers

The Minnesota Crop Improvement Association can assume no financial responsibility for seed or other products listed in this directory or for disagreements over sales which may arise from this list. However, complaints about certified or quality assured products addressed to the Association will be investigated.

Claims over seed performance involving the Minnesota Crop Improvement Association must be addressed as provided in the Minnesota Department of Agriculture Rules for Arbitration of Seed Performance Disputes.

Inquiries regarding product availability should be directed to producers and conditioners listed. Buyers should insist on proof of conformance (e.g. attachment of certification labels to bags or being provided with a certificate of conformance) when purchasing certified or quality assured products.

# ABOUT MCIA

---

---

## Mission Statement

Minnesota Crop Improvement Association is an organization dedicated to improving the productivity, profitability, and competitive position of producers, processors, and distributors of agricultural products by providing services to enable them to provide high-quality products to Minnesota, the United States, and the World.

## Background

Minnesota Crop Improvement Association (MCIA) provides a diverse offering of certification and quality assurance services to a wide array of agricultural and food product producers and handlers. Products certified by MCIA include field crop seed, turf seed, sod, native plant seed, noxious weed seed free forage and mulch, identity-preserved grains for specialty grain markets as well as numerous organic crops, livestock, and food products. MCIA also provides customized quality assurance services such as field inspections, seed and grain facility evaluations, as well as other third-party audit and on-site evaluations. MCIA produces and distributes Foundation seed of publicly developed crop varieties and serves as the marketing agent for licensing varieties developed at the University of Minnesota.

MCIA is a 501(c)(5) not-for-profit association funded by the fees it charges for the services it provides. MCIA operates from its offices on the Saint Paul campus of the University of Minnesota. MCIA serves its over 500 members with 15 full-time employees, including three field supervisors located at various locations throughout the state. In addition, MCIA utilizes over 20 part-time employees to assist with field inspections and other seasonal work. MCIA is governed by an 11-member board of directors elected from its membership.

## Board of Directors

Paul Kjolhaug, Willmar, Chairman	Bob Ehlers, Elbow Lake	Jay Miller, Shakopee
Jim Kukowski, Strathcona, Vice Chairman	Nancy Jo Ehlke, UMN, Saint Paul	Mory Rugg, Fargo, N.D.
Duane Dahlman, Cokato, Secretary	Kurt Flegel, Danvers	Darius Thiel, Wendell
Mike Zabel, Plainview, Treasurer	Scott Habstritt, Roseau	

## History

MCIA has served the agricultural industry in the Upper Midwest for over 100 years. MCIA was founded in 1903 to promote the breeding, growing, and distribution of improved field crop varieties developed at the University of Minnesota to crop producers throughout the state. A directory of members was first published in 1906 and the publication of a list of those with inspected and approved seed began in 1912. In 1955, the Minnesota Seed Law was amended to officially recognize MCIA as the official seed certifying agency of Minnesota. Over the years, MCIA has expanded its programs and related services to meet the needs of its members and the demands of a changing agricultural and food industry. It was formally designated as the official certification agency in Minnesota for noxious weed seed-free forage and mulch in 1997 and was accredited as an organic certifier under the National Organic Program in 2002.

As an independent third party, MCIA strives to provide superior programs and services to meet the needs of today's changing agricultural world.

## FOUNDATION SEED

### What is Foundation Seed?

Foundation seed is the initial generation of seed in the seed certification program. Foundation seed is planted by seed growers to produce Registered and Certified class seed.

### How is Foundation Seed Produced?

The MCIA Foundation Seed Program operates under an agreement with the University of Minnesota Agricultural Experiment Station to increase, maintain, and distribute Foundation seed of new and established publicly developed varieties. MCIA cooperates closely with the University of Minnesota plant breeding programs in soybeans, wheat, barley, oats and grasses. MCIA also cooperates with similar organizations in neighboring states to supply varieties developed by other public plant breeding programs.

### Who is Eligible to Purchase Foundation Seed?

Foundation seed is available to MCIA members who have previous history producing seed in the certification program. Eligible producers are notified of varieties available and procedures for ordering seed.

### What Should I Look for?

A Foundation Seed certification label must be attached to each container. For seed sold in bulk, a Bulk Seed Sales Certificate must accompany each load of seed.

**FOUNDATION SEED**

Linkert wheat  
Lot RB14012  
14-12345

**Contact MCIA for a list of available varieties or to buy Foundation Seed.**

## **VARIETY LICENSING**

### **What is Variety Licensing?**

Minnesota Crop Improvement Association (MCIA) is the licensing agent for agronomic crops developed at the University of Minnesota. Plant breeders at the University continue to develop new varieties of soybeans, wheat, barley, oats and grasses. MCIA serves as the primary point of contact for producers and processors interested in new Minnesota varieties.

### **Why are Some Varieties Licensed?**

Crop varieties that are suitable for large scale commercial production are released as public varieties through the traditional Foundation seed distribution program. However, many recent releases are food grade or special use varieties that require unique production and handling capabilities or access to specialty markets.

### **Who is Eligible to License Varieties?**

Producers or companies that can demonstrate their capability to successfully produce and commercialize products of the type to be licensed will be considered as licensing partners to the University.

### **How are Varieties Licensed?**

MCIA provides a Material Transfer Agreement (MTA) which allows an individual or company to evaluate the agronomic traits and to assess the potential for commercialization. Parties interested in licensing can submit a proposal for licensing to MCIA. Proposals are reviewed based on criteria established to identify licensing partners most appropriate for the variety being released.

# PLANT VARIETY PROTECTION

---

---

The developer of a new distinct variety may obtain protection for that variety, provided the variety meets the requirements of the Plant Variety Protection Act (PVPA). A certificate is provided to the developer of a variety that grants exclusive rights for reproducing and marketing the seed. The PVPA is administered by the United States Department of Agriculture.

Many of the varieties listed in this publication have either a Certificate of Plant Variety Protection (PVP) issued to them or an application has been made for Plant Variety Protection. PVP Title V specifies seed be sold by variety name only as a class of certified seed. If a variety is not protected with the Title V option, the owner of the variety still has the exclusive right to determine who can produce and market the variety as a seed product.

PVP-protected varieties may be saved for your own planting only; you may not sell seed to a neighbor without specific permission of the certificate holder.

Varieties listed on the following page were commonly grown in Minnesota in the last few years. Additions or deletions may occur at any time. It is the responsibility of the buyer and seller to confirm the PVP status of a crop variety before buying or selling a specific variety. It is illegal for anyone to purchase “grain” of a protected variety and utilize it for planting purposes.

Listed below are types of protections and the appropriate PVP statements.

---

## VARIETIES FOR WHICH PROTECTION IS CONTEMPLATED OR IS APPLIED FOR

## SEED LABORATORY SERVICES

### **What is the purpose of the seed laboratory?**

The MCIA laboratory tests seed for quality. Germination, physical purity—including other crop and weed contaminants, varietal verification, vigor, and herbicide tolerance tests are conducted by the lab, as well as other crop-specific tests.

### **Who determines how seed is tested?**

The MCIA seed laboratory follows testing rules established by the Association of Official Seed Analysts (AOSA). These rules, used by regulatory agencies and commercial labs throughout the U.S., set the standard for seed testing in North America and are recognized internationally.

### **Why should my seed be tested?**

Seed testing is the final step in the seed certification process. The test results will be used to verify that the seed standards have been met for that particular crop and seed class. Seed lots certified by MCIA are required to be tested at the MCIA seed laboratory, with the exception of native species. Testing information can also be used for labeling and/or quality assurance. Service testing is available for unconditioned seed and seed that is not in the certification program. A host of tests offered, including germination, vigor, purity, and moisture, can help a seed producer, seller, or buyer assess seed quality.

### **How do I submit samples?**

Sample bags are available at the MCIA office for submitting your samples. Include an MCIA Sampling Report, available on our web site or from the MCIA office, to provide information about your seed lot. The form is required for certified samples and is useful for other types of service samples. You can receive preliminary and final results by e-mail, and a final report will be mailed to you.

### **What should I look for after testing?**

Seed tested as part of final certification will receive a Seed Certification Report, indicating the test results and a *passed* or *failed* status. Seed tested under the service testing program or non-certified seed will receive a Laboratory Report of Analysis, which will indicate the results of the tests requested.

**For more information, call MCIA or visit our web site at [www.mncia.org](http://www.mncia.org).**

## BARLEY

NAME, CITY	TELEPHONE	ACREAGE
		Reg Cert

**Conlon** - Two-rowed spring barley developed for western North Dakota. Early maturity, high test weight, leaf disease resistance. Resistant to net blotch and powdery mildew. Moderately susceptible to spot blotch and Fusarium head blight. Susceptible to loose smut, leaf rust, septoria, scald, barley yellow dwarf virus, and QCCJ pathotype of wheat stem rust. Classified as a malting variety by AMBA. Released by North Dakota Agricultural Experiment Station in 1996. PVP(94) Title V.

### Freeborn County

Albert Lea Seed House, Inc., Albert Lea.....	507-373-3161	65
---	--------------	----

**Lacey** - High yielding variety with improved malting quality characteristics. It is a six-row, smooth awn, white aleurone variety with good kernel plumpness. Lacey is average height with good lodging resistance; resistance to spot blotch and is similar to Robust for scab reaction. Classified as a malting variety by AMBA. Released by Minnesota Agricultural Experiment Station in 2000. License required for seed production. PVP(94) Title V.

### Kandiyohi County

Shoreview Farms, Inc./Kevin Huisman, Atwater.....	320-974-8566	22

### Wilkin County

Yaggie, Allen, Breckenridge.....	218-641-1175	106
Yaggie, Richard, Breckenridge.....	218-641-1175	110

**ND Genesis** - A high yielding two-rowed barley developed for ND and adjacent parts of Minnesota, Montana and South Dakota. It is medium-late maturity with medium straw strength, semi-smooth awns and long rachilla hairs. ND Genesis is moderately resistant to resistant to the net form of net blotch, and moderately resistant to the spot form of net blotch and spot blotch. It has large, plump kernels, low protein, some drought tolerance, accumulates less DON and has lower beta-glucan values than Pinnacle. Classified as a malting barley by AMBA. Released by the North Dakota Agricultural Experiment Station in 2015. PVP(94) Title V is applied for.

### Clay County

Olek, Bradley, Felton.....	218-494-3440	147
----------------------------	--------------	-----

## BARLEY

NAME, CITY	TELEPHONE	ACREAGE
		Reg Cert

**Pinnacle** - A two-rowed barley with long rachilla hairs, medium-late maturity, medium height and strong straw strength. It has lower protein than Conlon and higher percentage of plump kernels. Pinnacle is moderately resistant to spot blotch but susceptible to loose smut and stem rust. It is an AMBA recommended malting barley variety. Released by North Dakota Agricultural Experiment Station in 2006. License required for seed production. PVP(94) Title V.

### Freeborn County

Albert Lea Seed House, Inc., Albert Lea.....	507-373-3161	19 45
---	--------------	-------

### Norman County

Crompton Farms, Ada.....	218-784-8183	156
--------------------------	--------------	-----

### Wilkin County

Etten, Karlo J., Foxhome.....	218-205-6397	52
-------------------------------	--------------	----

**Quest** - A six-rowed malting barley with improved Fusarium head blight resistance and lower mycotoxin (DON) levels. Quest has a semi-smooth awn, white aleurone and long rachilla hair. It is about the same height as Robust, but taller than Lacey with yield and grain protein levels similar to Tradition and Lacey. Selected by AMBA as a recommended malting variety in December 2010. Released by Minnesota Agricultural Experiment Station in 2010. License required for seed production. PVP(94) Title V.

### Freeborn County

Albert Lea Seed House, Inc., Albert Lea.....	507-373-3161	80
---	--------------	----

**Rasmusson** - High yielding variety with improved malting quality characteristics. It is a six-row, semi-smooth awn, white aleurone variety with good kernel plumpness. Rasmusson is shorter than most current six-rowed malting varieties in the Midwest. It has performed well in Minnesota and North Dakota yield trials. It has good lodging resistance, resistance to spot blotch and is similar to Robust for scab reaction. Released by the Minnesota Agricultural Experiment Station in 2008. License required for seed production. PVP(94) Title V.

Zabel Seeds, Plainview .....507-534-2498 6 83

**BEANS**

**Eclipse Black** - An early maturing, high yielding black bean with ovoid seed and dull (opaque) black seed coat. Eclipse is approximately three days earlier in maturity than T-39 and exhibits a synchronous plant dry-down at harvest. Eclipse is resistant to bean common mosaic virus, anthracnose race 7 and many races of rust. Released by North Dakota Agricultural Experiment Station. License and royalty agreement from NDSU Research Foundation required for seed production. PVP(94) Title V.

**Grant County**

Kappahn, John M., Elbow Lake ....218-685-4604 90 129

**ND Palomino Pinto** - A slow darkening pinto bean variety with good yield potential it was released by the North Dakota Agricultural Experiment Station. It has an intermediate growth habit and maturity is similar to commercial checks. ND Palomino is resistant to Bean Common Mosaic Virus (BCMV). License and royalty agreement from NDSU Research Foundation required for seed production. PVP(94) Title V is contemplated.

**Grant County**

Kappahn, John M., Elbow Lake ....218-685-4604 46

**BEANS**

**Red Hawk Dark Red Kidney** - A dark red kidney bean variety with high yield and an upright bush growth habit. It is mid- to full-season maturity, is resistant to Races 7 and 73 of anthracnose, and has excellent canning quality. Red Hawk was released by the Michigan Agricultural Experiment Station and the U.S. Department of Agriculture's Agricultural Research Service in 1997. A research fee will be assessed on each unit of certified seed sold. PVP(94) Title V.

**Norman County**

Star of the North, Gary .....218-356-8300 50

**Rosie Light Red Kidney** - A high yielding, medium late maturity, light red kidney bean released by the North Dakota Agricultural Experiment Station. It is tolerant to the root rot fungal complex commonly present in MN. Rosie is resistant to Bean Common Mosaic Virus (BCMV) and is resistant to anthracnose race 73. It has intermediate levels of resistance to common bacterial blight and halo blight. Rosie is a full season variety and not recommended for late planting. License and royalty agreement from NDSU Research Foundation required for seed production. PVP(94) Title V.

**Norman County**

Star of the North, Gary .....218-356-8300 30

**Talon Dark Red Kidney** - A high yielding medium maturity, dark red kidney released by the North Dakota Agricultural Experiment Station. Talon is tolerant to the root rot fungal complex commonly present in MN. It is resistant to Bean Common Mosaic Virus (BCMV) and has shown resistance to the new bean rust race 20-4. Talon is resistant to anthracnose race 73 and has intermediate levels of resistance to common bacterial blight and halo blight. License and royalty agreement from NDSU Research Foundation required for seed production. PVP(94) Title V.

## BIG BLUESTEM

NAME, CITY	TELEPHONE	ACREAGE	
		Reg	Cert

**Bison** - Early maturity, well-adapted to northern climates. Uniform plant type, grows 3 to 6 feet tall. Good leafiness, high plant vigor and seed yield, high in forage quality. No Registered class. Released by North Dakota and Minnesota Agricultural Experiment Stations and USDA-ARS/USDA-SCS in 1989.

### Kittson County

Carlson Prairie Seed Farm, Inc.,  
Lake Bronson .....218-754-2693

## BIRDSFOOT TREFOIL

**Norcen** - Broad leaved type with intermediate growth habit. Flowers earlier than Carroll but later than Viking. Less winter-hardy than Leo and Carroll. Developed cooperatively by Experiment Stations of the North Central states. Released in 1981.

### Lake of the Woods County

Pieper Farm, Daniel, Roosevelt .....218-442-2218 68

**Agassiz** - A medium maturing pea, 2 days earlier than CDC Mozart. The variety is semi-leafless, the seeds are yellow in color and are medium in size, similar to DS Admiral. Vine length is also similar to DS Admiral. Agassiz is resistant to powdery mildew, moderately susceptible to Fusarium wilt and susceptible to Mycosphaerella. Agassiz is marketed by Meridian Seeds, LLC. PVP(94) Title V.

### Polk County

K & D Krueger Farms & Sons,  
East Grand Forks .....701-740-1752 157

**Jetset** - A semi-leafless variety. The seeds are yellow in color and are similar in size to DS Admiral. Jetset has white flowers and the plants stand well. The pods are green and are blunt on the distal end. Jetset matures mid-season, a day earlier than DS Admiral. Licensed by Legume Logic to Meridian Seeds of Casselton, ND. PVP(94).

### Polk County

K & D Krueger Farms & Sons,  
East Grand Forks .....701-740-1752 266

## KENTUCKY BLUEGRASS

**Park** - Excellent seedling vigor, moderate resistance to rust, susceptible to mildew. Good forage and seed producer. Makes tough, durable sod. Released by the Minnesota Agricultural Experiment Station in 1957.

### Roseau County

C & S Habstritt Inc., Roseau.....218-463-1193 20 470  
Erickson, Douglas, Roseau .....218-469-2660 190

## OATS

NAME, CITY	TELEPHONE	ACREAGE	
		Reg	Cert

**Badger** - An early-maturing, high-yielding oat line. The heading date for Badger is similar to Kame. It is similar in height to Kame but has much better straw strength. Badger is a yellow oat with very good test weight. It has a good crown rust rating and is resistant to smut. Barley yellow dwarf virus tolerance is similar to other early varieties. Released by the Wisconsin Agricultural Experiment Station in 2010. No Registered class. License required for seed production. PVP(94).

### Rice County

Werner Seed Company, Dundas.....507-645-7995 30

### Wabasha County

Zabel Seeds, Plainview .....507-534-2498 51

**BetaGene<sup>TM</sup>** - A mid-late yellow oat variety with high yields, good test weight and high percent beta-glucan. BetaGene(TM) has strong straw, good resistance to crown rust and good tolerance to barley yellow dwarf virus. Released by Wisconsin Agricultural Experiment Station in 2012. No Registered class. License required for seed production. PVP(94) Title V.

### Freeborn County

Albert Lea Seed House, Inc.,  
Albert Lea.....507-373-3161 233

### Le Sueur County

Stangler Seed Co LLC, Kilkenny ....507-595-2883 15

**Deon** - A high yielding spring oat with overall good agronomic traits. It has good test weight and is medium yellow in color. Maturity rating, height and lodging score is similar to Rockford but Deon has a better resistance to barley yellow dwarf virus. It also has highly effective crown rust resistance and resistance to smut. Released by the Minnesota Agricultural Experiment Station in 2011. License required for seed production. PVP(94) Title V.

**Jury** - A white seeded variety with resistance to the races of both crown and stem rust that are prevalent in the northern plains. Jury provides high grain yield with high milling quality, along with moderate tolerance to barley yellow dwarf virus. Developed at North Dakota State University and released in 2012. License required for seed production.

**Polk County**

Fosston Tri-Coop, Fosston.....218-435-6222      210

**Natty** - An early maturing white-hulled oat line that is slightly later than Shelby 427. It has good yield potential and high test weight. It is expected to have good milling quality with a high groat percentage but relatively low beta-glucan content. Natty is resistant to smut, moderately resistant to barley yellow dwarf virus, and moderately resistant to moderately susceptible to crown and stem rust. Released by South Dakota Agricultural Experiment Station in 2015. License required for seed production. Natty has no saleable Registered seed class. It can only be sold as the Certified class of seed. PVP(94) Title V is applied for.

**Wabasha County**

Zabel Seeds, Plainview.....507-534-2498      19

**Rockford** - A high yielding variety that offers very good lodging resistance. Rockford possesses crown rust and stem rust resistance, is moderately susceptible to stem rust race NA67, and is tolerant to barley yellow dwarf virus. License required through North Dakota Crop Improvement Association for seed production and distribution. PVP(94).

**Polk County**

Fosston Tri-Coop, Fosston.....218-435-6222      251

**Saber** - An early, high yielding spring oat variety intended for production in mid-western spring oat-growing environments. Saber has light yellow kernels, short plant height and a very good test weight. Saber is tolerant to barley yellow dwarf virus, susceptible to loose smut and moderately resistant to moderately susceptible to crown rust. Released by Illinois Agricultural Experiment Station. License required for seed production. PVP(94) Title V.

**Wabasha County**

Zabel Seeds, Plainview.....507-534-2498      37

**Shelby 427** - A white-hulled spring oat that is early maturing. It has superior grain yield and test weight compared to other early varieties. Shelby 427 has better crown rust resistance than Colt and lodging resistance is better than Jerry and Colt. Kernels have a high groat percentage. Released by South Dakota Agricultural Experiment Station in 2010. License required for seed production. Shelby 427 has no saleable Registered class. It can only be sold as the Certified class of seed. PVP(94) Title V.

**Souris** - Medium-tall, medium maturity. High yielding, white-hulled cultivar with test weights consistently high enough for premium oat markets. Souris will grow under high moisture and fertility conditions. It has a new source of resistance to prevalent races of crown rust. License required through North Dakota Crop Improvement Association for seed production and distribution. PVP(94).

**Polk County**

Fosston Tri-Coop, Fosston.....218-435-6222 340

**Streaker** - A medium maturity, hullless spring oat. When compared to Buff, also a hullless variety, it has superior grain yield, test weight, protein percentage, crown rust and barley yellow dwarf virus resistance. Streaker is medium height. It is a multi-purpose variety that may be used for forage, grain, and/or straw. Released in 2008 by the South Dakota Agricultural Experiment Station. License required for seed production. PVP(94) Title V.

**Swift County**

Falk's Seed Farm, Murdock.....320-875-4341 56

**RYE**

**Aroostook** - A winter rye selected for use as a cover crop plant for short growing season areas following late harvested crops. It is an early, tall cereal grain with narrow dark leaves and good winter hardiness. Yields vary depending on weather, soil fertility, and planting and harvesting dates. Released in 1981 in cooperation with the USDA Natural Resources Conservation Service, the New York State College of Agriculture and Life Sciences, Cornell University, and the Maine Department of Agriculture, Division of Plant Industry.

**Freeborn County**

Albert Lea Seed House, Inc., Albert Lea 507-373-3161 40

**Spooner** - A high yielding winter rye. Grain yields and test weights exceed those of Hancock; heads one day earlier and has excellent winter hardiness. It is tall, averaging about 3 inches taller than Hancock with less lodging. Developed at the University of Wisconsin Madison and released in 1992.

**MN1613CN** - Relative Maturity 1.6. A conventional SCN resistant soybean line. Its performance is equal to or superior to other conventional SCN resistant lines of similar maturity. MN1613CN is slightly earlier than MN1701CN. It carries the Rps1a gene for resistance to phytophthora root rot Race 1 and has fair tolerance to iron chlorosis. It is average for protein and oil content. It has white flowers, gray pubescence, brown pods and buff hila. Released by the University of Minnesota Agricultural Experiment Station in 2015. License required for seed production.

**MN1701CN** - Relative Maturity 1.7. A general-use soybean intended for use in the commodity, non-GMO, or organic markets. MN1701CN is resistant to Race 3 of soybean cyst nematode and is intermediate in reaction to iron deficiency chlorosis. It has white flowers, brown pods, tawny pubescence, and yellow hila. Released by Minnesota Agricultural Experiment Station in 2010. License required for seed production.

**Cottonwood County**

Iverson, Glen, Lamberton .....507-445-3388      110

**Rice County**

Werner Seed Company, Dundas.....507-645-7995      5    24

**MN1806CN** - Relative Maturity 1.8. A conventional soybean selected for high yield, soybean cyst nematode resistance, and very good lodging resistance. It is intended for use in the commodity, non-GMO, or organic markets and has white flowers, tawny pubescence, brown pods and yellow hila. MN1806CN carries the Rpslk gene for resistance to phytophthora root rot and has average tolerance to iron chlorosis. Protein and oil content are average. Released by the University of Minnesota Agricultural Research Station in 2014. License required for seed production.

**Brown County**

**Rice County**

Werner Seed Company, Dundas.....507-645-7995      23

**ND Bison** - Relative Maturity 0.7. A conventional soybean intended as a replacement for Sheyenne. It has improved defensive traits including moderate resistance to soybean cyst nematode and resistance to races 3 and 4 of phytophthora root rot. It also has tolerance to iron-deficiency chlorosis and resistance to lodging. ND Bison has purple flowers, tawny pubescence, brown pods and yellow hila. Released by the North Dakota Agricultural Experiment Station in 2016. License required for seed production. PVP(94) Title V is contemplated.

**Polk County**

AgriMAX, Fisher .....218-891-2211      6

**Sheyenne** - Relative Maturity 0.8. High yield, yellow hila for potential food grade, great resistance to lodging, moderately resistant to IDC, and has race 3 resistance for Phytophthora root rot. Sheyenne has purple flowers, gray pubescence, brown pods and yellow hila with dull seed coat. Released by North Dakota Agricultural Experiment Station. License required for seed production. PVP(94) Title V.

## TIMOTHY

**Clair** - Vigorous and very early. Adapted to a three-cut system with alfalfa. Released in 1958 by Kentucky Agricultural Experiment Station.

**Lake of the Woods County**

Northern Excellence Seed LLC,  
Williams .....218-783-2228

## TRITICALE

**141** - An awnleted spring triticale with good adaptation for forage production. 141 has tall erect growth habit with a dense canopy of dark green leaves. It has superior tolerance to disease and tough growing conditions when compared to other spring forages and has very high yield capabilities. Developed by Syngenta Seeds, Inc. PVP(94) Title V.

**Freeborn County**

Albert Lea Seed House, Inc.,  
Albert Lea.....507-373-3161

**NE426GT** - A grain and fall forage winter triticale developed cooperatively by the Nebraska and Iowa Agricultural Experiment Stations. It is awned, medium-tall, early heading variety. NE426GT has moderate straw strength and has moderate resistance to stem and leaf rust. The Registered seed class is non-saleable. License agreement is required for seed production.

**Freeborn County**

Albert Lea Seed House, Inc.,  
Albert Lea.....507-373-3161      56

*Looking for organic seed? See page 74.*

## DURUM WHEAT

NAME, CITY	TELEPHONE	ACREAGE	
		Reg	Cert

**Carpio** - A spring durum wheat released based on its high grain yield potential, disease resistance, and excellent end-use qualities. Carpio is resistant to leaf rust and stem rust and has a moderate level of tolerance to Fusarium head blight. Developed by the North Dakota Agricultural Experiment Station in cooperation with the USDA-ARS and released in 2012. License required for seed production. PVP(94) Title V.

### Polk County

Altepete, Daniel,  
East Grand Forks ..... 701-741-7957 125

**Joppa** - A very high yielding spring durum wheat released by the North Dakota Agricultural Experiment Station. Joppa has medium straw strength and a good disease resistance package including scab (FHB) resistance similar to other NDSU varieties. Pasta quality characteristics of Joppa include very high dough and gluten strength, high gluten index, and outstanding color. License required for seed production. PVP(94) Title V.

### Norman County

Crompton Farms, Ada ..... 218-784-8183 109

### Polk County

Altepete, Daniel, East Grand Forks 701-741-7957 125

## WHEAT

**Albany** - Hard red spring wheat. The primary area of adaptation is the Northern Plains where its purpose is for breadstuffs. Albany resembles Freyr but heads about four days later and is about 5 cm. shorter, with moderately strong straw strength. It is postulated to have the gene Lr24 for leaf rust resistance. Albany is moderately resistant to Fusarium head blight with low levels of DON. Distributed by Limagrain Cereal Seeds LLC. PVP(94) Title V.

### Polk County

Balstad, Scott, Fosston ..... 218-435-6311 100

**Bolles** - A medium maturity hard red spring wheat with very high grain protein content, competitive grain yields, and high baking quality. It has excellent leaf rust resistance, moderate resistance to Fusarium head blight and bacterial leaf streak, and excellent preharvest sprouting resistance.

**MS-Stingray** - A hard red spring wheat selected for yield, agronomics, and reaction to diseases. It is adapted to the hard red spring growing regions of North Dakota and surrounding states. The primary use will be for milling and baking of breads using processed and whole wheat flour. MS-Stingray is moderately resistant to prevalent races of leaf rust. License agreement with Limagrain Cereal Seeds is required for seed production. PVP(94).

### Marshall County

Jensen Farms, Stephen .....	218-478-3397		
-----------------------------	--------------	--	--

**Prevail** - A hard red spring wheat with high yield potential and test weight. An awned variety, Prevail contains adequate grain protein concentration, is relatively short in stature and has moderate levels of resistance to Fusarium head blight. Released by the South Dakota Agricultural Experiment Station in 2013. License required for seed production. PVP(94) Title V.

**Prosper** - A hard red spring wheat variety adapted to eastern North Dakota and western Minnesota. Prosper is intended to provide growers with a very high yielding variety that includes an overall good leaf disease package. It has medium straw strength, semi-dwarf height, and medium maturity. Protein is similar or slightly better than Fallor with excellent milling and baking properties. Prosper is moderately resistant to scab and leaf and stem rusts. A joint release from North Dakota and Minnesota in spring 2011. License required for seed production. PVP(94) Title V.

## WHEAT

NAME, CITY	TELEPHONE	ACREAGE	
		Reg	Cert

**RB07** - Early, semi-dwarf hard red spring wheat. A high yielding variety that has been consistently above average across all Minnesota locations. The heading date is similar to Oxen. It is medium height with moderately strong straw. It has above average protein and medium test weight. RB07 has shown good resistance to Fusarium head blight. It has excellent leaf and stem disease resistance. It is resistant to pre-harvest sprouting with good falling numbers and medium high baking qualities. Released by the Minnesota Agricultural Experiment Station. License required for seed production. PVP(94) Title V.

### Polk County

Fosston Tri-Coop, Fosston.....218-435-6222      95

**Rollag** - A unique combination of highest available resistance to Fusarium head blight (scab), strong straw and yield. The scab rating for Rollag is equal to Glenn and Brick but Rollag has better yield. It is a medium maturity variety with above average protein and test weight. It is comparable to Barlow for yield but has much better straw strength. It is resistant to stem rust, with moderate resistance to leaf rust and moderate resistance to other leaf diseases. Released by the Minnesota Agricultural Experiment Station in 2011. License required for seed production. PVP(94) Title V.

### Kittson County

Vatthauer Farm, Red Lake Falls.....218-253-2490      449

**Shelly** - A hard red spring wheat well adapted to cultivation in Minnesota and the spring wheat growing regions of North and South Dakota. It has high grain yields comparable to the highest yielding varieties but at a higher protein level. Grain has good end-use quality and can be used in the milling industry domestically and for export. It has moderate resistance to bacterial leaf streak, Fusarium head blight and leaf rust and excellent resistance to stripe and stem rust. Shelly has good test weight and pre-harvest sprouting resistance. PVP(94) Title V is contemplated.

		Reg	Cert

**Emerson** - A hard red winter wheat with acceptable grain yield, excellent agronomic and end-use quality traits, and superior resistance to stem rust, leaf rust, stripe rust and Fusarium head blight make Emerson particularly well suited to the eastern prairie production environment. It was developed by Lethbridge Research Centre of Agriculture and AgriFood Canada. PVP(94) Title V is applied for.

R & R Seeds - Ruth Hoefs/Ron Pomije, Le Center .....	612-756-1500	
---	--------------	--

**Expedition** - A hard red winter wheat, awned, white-chaffed, early maturing, semi-dwarf. Plant height is short, winter hardiness is rated good-excellent. Straw strength is fair. Expedition is resistant to prevalent races of stem rust, however, is moderately susceptible to leaf rust. It exhibits some tolerance to head scab but is susceptible to tan spot and Hessian fly and had an intermediate reaction to soil-borne mosaic virus. End-use characteristics are rated acceptable overall. Released by South Dakota Agricultural Experiment Station in 2003. PVP(94) Title V.

**Le Sueur County**

Stangler Seed Co LLC, Kilkenny .....	507-595-2883	8 45
--------------------------------------	--------------	------

**Ideal** - A hard red winter wheat with high grain yield and adaptation to the northern winter wheat production area. It exhibits average to good milling and baking qualities, good winter hardiness and excellent resistance to lodging. Ideal is moderately susceptible to stripe rust and susceptible to head scab, but it exhibits moderate resistance to tan spot, leaf and stem rust. Released by the South Dakota Agricultural Experiment Station in 2011. License required for seed production. PVP(94) Title V.

**Polk County**

Fosston Tri-Coop, Fosston.....	218-435-6222	40

## WINTER WHEAT

NAME, CITY	TELEPHONE	ACREAGE	
		Reg	Cert

**Jerry** - Hard red winter wheat consistently among top yielding group of varieties. Percent protein superior to Seward & Ransom. Good test weight, excellent lodging resistance and good winter survival. Released by North Dakota Agricultural Extension Service in 2002.

**Polk County**

Fosston Tri-Coop, Fosston.....	218-435-6222	50
--------------------------------	--------------	----

**Redfield** - A hard red winter wheat adapted to the northern part of the winter wheat region with excellent lodging resistance. It is medium maturity, red chaff, with good winter hardiness. Redfield exhibited average to good milling quality. It is moderately susceptible to leaf rust, moderately susceptible to moderately resistant to stripe rust, and susceptible to wheat streak mosaic virus. Released by the South Dakota Agricultural Experiment Station in 2013. License required for seed production. PVP(94) Title V.

**Le Sueur County**

Stangler Seed Co LLC, Kilkenny .....	507-595-2883	10 45
--------------------------------------	--------------	-------

**SY Wolf** - A hard red winter wheat best adapted to North and South Dakota and Western Nebraska. It is moderately resistant to leaf rust, powdery mildew, septoria and tan spot. Developed by Syngenta Seeds, Inc. PVP(94) Title V.

**Polk County**

AgriMAX, Fisher.....	218-891-2211	
----------------------	--------------	--

**WB-Matlock** - A hard red winter wheat that is well-adapted to the Northern plains. Released by WestBred LLC in 2010. PVP(94).

**NOTE:** \* Wisconsin varieties are assessed a license fee of \$25.00; royalties are based on seed certified (rather than seed sold).

## QUALITY ASSURED SEED

### What is Quality Assured Seed?

Quality Assured (QA) seed has met standards designed to preserve the purity and identity of a crop variety. Standards, similar to seed certification, enable a company to produce and market seed according to sound quality management practices.

### How is Seed Quality Assured?

The quality assurance process includes field inspections, laboratory testing, audits of production records, and on-site evaluations of conditioning and treatment facilities. Seed meeting all requirements is eligible to be labeled with the AOSCA QA logo.

### Who Produces Quality Assured Seed?

Seed producers of all crop types may utilize a QA program to access a complete service for seed sold as varieties, hybrids, brands or blends. QA programs can be customized to support an existing quality management system or as part of an AOSCA program.

### Why buy Quality Assured Seed?

Quality Assured seed provides assurance to seed buyers that the seed is of known purity and quality as verified by an unbiased third-party.

### What Should I Look for?

Seed meeting QA standards may bear a Quality Assurance label or be marked with a QA logo. Buyers of bulk quality assured seed may be provided with a QA Bulk Sales Certificate.

**BG 7050 RR2Y Brand** - Relative Maturity 0.5. It has purple flowers, light tawny pubescence, tan pods and brown hila.

**Becker County**

Hein Farms, Inc., Audubon .....218-439-6621

**BG 7071RR2Y Brand** - Relative Maturity 0.7. It has purple flowers, gray pubescence, brown pods and imperfect black hila.

**Becker County**

Hein Farms, Inc., Audubon .....218-439-6621

**Bluestem 0906N Brand** - Relative Maturity 0.9. A conventional, medium-tall height, mid to late Group 0 soybean having extremely high yield potential. The grain produced from this soybean has an exceptionally high oil content and protein. It has excellent iron-deficiency chlorosis scores and is resistant to Phytophthora root rot and Soybean cyst nematode. Bluestem 0906N Brand has purple flowers, tan pods, tawny pubescence and black hila. Distributed by Bluestem Farm Supply, LLC.

**Cottonwood County**

Bluestem Farm Supply, LLC (Lee Erickson),  
Mountain Lake .....507-427-2097

**Bluestem 1611N Brand** - Relative Maturity 1.6, A medium height, semi-bush type soybean. It has good agronomics and fits all soil types. Excellent yield with good iron-deficiency chlorosis scores, Phytophthora root rot tolerance and Soybean cyst nematode resistance. Bluestem 1611N Brand has purple flowers, tan pods, tawny pubescence and brown hila. Distributed by Bluestem Farm Supply, LLC.

**Cottonwood County**

Bluestem Farm Supply, LLC (Lee Erickson),  
Mountain Lake .....507-427-2097

**Bluestem 1809N Brand** - Relative Maturity 1.8. A conventional, medium-tall, late Group 1 soybean having extremely high yield potential and excellent stress tolerance. It has excellent iron-deficiency chlorosis scores and resistance to Phytophthora root rot and Soybean cyst nematode. Bluestem 1809N Brand has purple flowers, brown pods, light tawny pubescence and black hila. Distributed by Bluestem Farm Supply, LLC.

## SEED CERTIFICATION—MORE THAN A FIELD INSPECTION

---

---

Occasionally someone asking how to complete seed certification or a farmer unfamiliar with the process will comment that their field was inspected and it is now certified. They have to be reminded that the field inspection is just one step in the overall Seed Certification process.

**Field Inspection:** The process starts with a field inspection application. MCIA staff will verify the seed source used and check the previous crop history. MCIA-trained inspectors will inspect the field to determine if it meets the standards for varietal identity, purity, isolation, and the presence of weeds and other crops.

Congratulations! Your field inspection is complete and you received a report that shows your field passed this first step. *Now what?*

- **Harvest, Handling, and Storage:** Proper cleaning of harvesting and handling equipment as well as storage bins is essential to maintaining varietal purity. Also, seed is a living organism and proper storage is very important, as high moisture or heating can cause reduced germination.
- **Seed Conditioning:** Certified seed must be conditioned at an MCIA-approved seed conditioning facility. Approved facilities have been inspected by MCIA personnel to determine if they meet the facility and equipment requirements for conditioning a specific crop. When you deliver your seed to the approved seed conditioner take along a copy of your field inspection report.
- **Seed Sampling:** Once the seed is conditioned, a sample must be taken by approved personnel at the seed conditioning facility or an MCIA representative will pull the sample, if necessary.
- **Seed Testing:** The official seed sample must be sent to the MCIA seed laboratory. A germination and purity test are conducted along with any other required tests. Once testing is completed you will receive a certification report indicating if your seed lot passed or failed.
- **Labeling Certified Seed:** Whether you sell the seed yourself or the approved facility is selling the seed, all seed sold must be properly labeled. Depending how the seed will be distributed, certified seed can be sold using a blue tag or a Bulk Certificate.
- **More to Remember:** Most small grain or soybean varieties are protected by the Plant Variety Protection Act (PVPA) or through license agreements, meaning that seed sold of those varieties must be certified or sold only with the permission of the variety owner.
- **Royalties and Fees:** Most crops produced as seed are subject to royalty and/or fee assessments. A seed producer or seller must be sure they understand their obligations regarding the payment of royalties or fees.

These are the key steps in completing seed certification. Visit the MCIA web site, [www.mncia.org](http://www.mncia.org), for more information on the seed certification process. Remember, *seed certification is more than just a field inspection.*

UNIVERSITY OF MINNESOTA  
Driven to Discover<sup>SM</sup>

# WHEAT

## HARD RED SPRING VARIETIES WITH PROVEN RESULTS

### LINKERT

Very strong straw  
High protein  
Good yields

### BOLLES

Superior protein  
High baking quality  
Leaf rust resistant

### SHELLY **NEW!**

High yields  
Good test weight  
Stripe rust resistant

### ROLLAG

Scab resistance  
Straw strength  
High test weight

**VARIETIES THAT COMBINE YIELD, QUALITY AND PERFORMANCE!**

Visit the Minnesota Agricultural Experiment Station at [www.maes.umn.edu](http://www.maes.umn.edu) or check your state or local variety trials. For a list of seed producers, visit the Minnesota Crop Improvement Association at [www.mncia.org](http://www.mncia.org) or call 1-800-510-6242.

The University of Minnesota is an equal opportunity educator and employer.

# Dakota Select Seed

*“Providing the seed for your success”*

## Newest Varieties

### ND1406HP SOYBEAN

ND1406HP is a conventional (non-GMO) type intended for the specialty high protein, tofu, or soy milk markets. However ND1406HP performs very well as a conventional soybean. In these areas it presents better yields and better quality than other NDSU varieties, while also performing very well as a conventional soybean. ND1406HP has purple flower color, gray pubescence, yellow hila with dull seed coat luster, and brown pod color. ND1406HP is a variety of 0.6 maturity that would be best adapted to many North Dakota counties along with several Minnesota counties.

### GOLD ND YELLOW FLAX

Gold ND is a yellow-seeded variety with very high yield potential. Gold ND has good oil content and oil drying quality. This variety has blue flowers and medium seed size. Gold ND is resistant to rust and has good tolerance to wilt. It is adapted to the north-central flax-growing region.

## Other Popular Varieties Available

***SOURIS OATS***

***RAWSON BARLEY***

***ROCKFORD OATS***

***OVERLAND WINTER WHEAT***

***NEWBURG OATS***

***FREEMAN WINTER WHEAT***

***JURY OATS***

**DAKOTA SELECT SEED (DSS)** is a marketing program for varieties licensed to the North Dakota Crop Improvement and Seed Association. For more information on the Dakota Select Seed Program or to learn how to become a grower call Gonzalo Rojas (Program Coordinator) at 701-231-8168, Toni Muffenbier at 701-231-8067, or visit [www.ndcropimprovement.org](http://www.ndcropimprovement.org).

## *Our partnership is a PROMISE.*

Grain Millers, Inc. is a privately held, family-owned company. We have always depended on **direct farmer relationships**. In addition to farm gate pricing and contracted grower production, we offer a Sustainable Grower Program and agronomy advice to help you get the most out of your operation. When you sell to Grain Millers you are selling into facilities that are widely known as some of the most technologically advanced mills in the world. **Our mills can be the engines of your market!**

### **We Buy Organic & Conventional Non-GMO:**

- Oats
- Corn
- Wheat
- Barley
- Lentils
- Soybeans
- Flax
- Rye

# WENSMAN®

## Make Wensman your YIELD LEADER!

Put the power of Wensman's yield leading hybrids to work on your farm! Wensman hybrids are bred specifically for your area utilizing **AgReliant Genetics' extensive corn research program**. AgReliant Genetics – including its **Wensman division** – is the **third largest seed corn company in the U.S.** It's not affiliated with a chemical company and is totally focused on seed.

AgReliant Genetics' researchers test over 100,000 hybrids each year, striving to develop the best corn products for our market area.

Their effort to develop corn hybrids with outstanding proprietary performance sets Wensman apart from our competitors now and going into the future.

The global power of AgReliant Genetics enables Wensman to focus on the seed needs of growers in Minnesota, North Dakota and South Dakota. Wensman's high quality corn hybrids, bred specifically for your farm, are the right choice.

**Make WENSMAN Your YIELD LEADER!**

**WENSMAN®**

# FARMERS INVESTING IN THEIR FUTURE.

**F**or more than 100 years, Minnesota corn farmers and their families have worked hard to produce high quality crops while preserving land for future generations. Today, ongoing research and good farming practices mean we're farming smarter than ever. Learn more at [mncorn.org](http://mncorn.org).

# Certified Seed Doesn't Cost...

# It Pays!

## ▲ PROVEN QUALITY

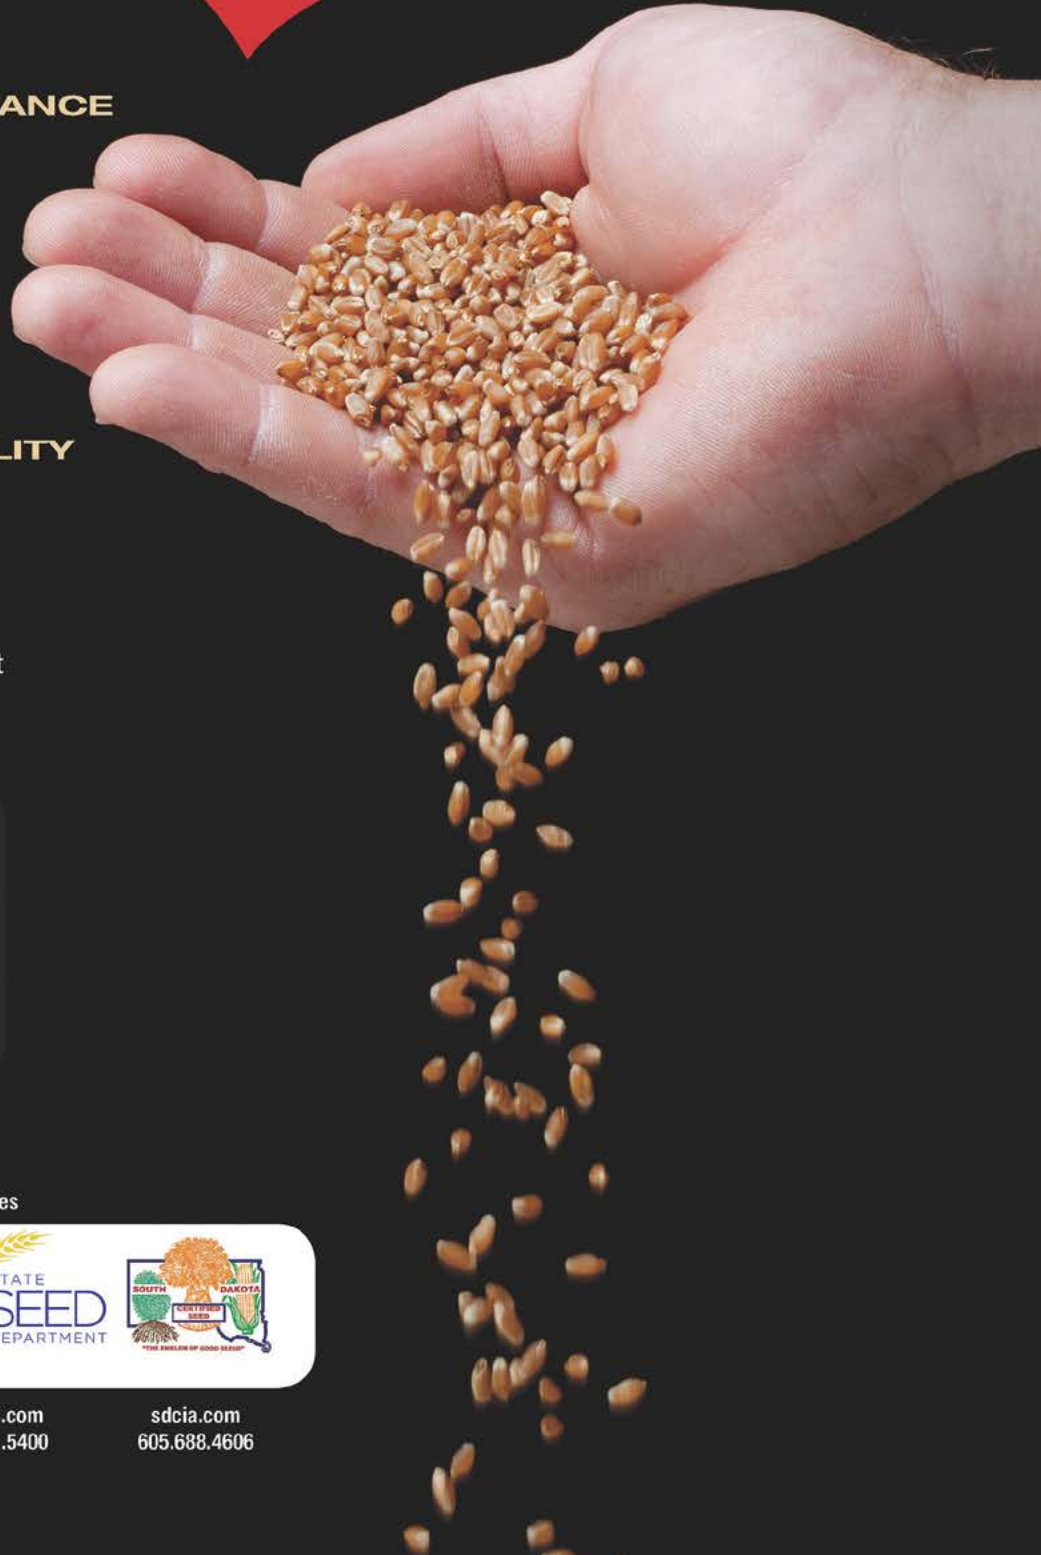

- High germination
- Fewer weed seeds
- Less inert matter
- Less seed-borne disease
- Known varieties

## ▲ SUPERIOR PERFORMANCE

- Better plantability
- Rapid stand establishment
- More uniform maturity
- Easier harvest
- Less dockage

## ▲ GREATER PROFITABILITY

- Newest genetics
- Less weed control costs
- Less disease control costs
- Greater yield per acre
- More return on your investment

# Take Control Of Your Commodity Cleaning

**With Crippen Processing Equipment And Expert Project Design From Bjerke Brothers!**

Here at Bjerke Brothers, we make it simple to put together your own processing facility for cleaning everything from beans to grain. Not only do we offer legendary Crippen equipment like air/screen cleaners, gravity tables and length graders, but also high-capacity equipment for terminals and large-scale facilities. Best of all, our experienced team can put everything together for you. We'll design the site, manage the project, source and integrate the equipment into a custom processing line, install and commission the equipment, train your operators and finally, provide service after your facility is operational.

**Control starts here.  
Contact Bjerke Brothers today.**

## APPROVED FACILITY PROGRAM

### What is the Approved Facility Program?

MCIA's Approved Facility Program provides an evaluation and approval process for facilities processing and selling seed and identity-preserved (IP) grain products. Facilities processing and/or handling products sold under the seed certification, QA seed and IP grain programs must be inspected and approved by MCIA.

### How is a Facility Approved?

To be approved, facilities must meet requirements appropriate for the seed or grain to be processed. Approval is granted on an annual basis for conditioning and handling specific seed types or for processing grain products for specified end uses.

### Why Utilize an Approved Facility?

Approved facilities are inspected on a regular basis to determine on-going conformance to requirements necessary to preserve the product identity and quality and adequately process products.

### What Should I Look For?

Approved facilities are issued Certificates of Approval annually which are to be prominently posted in their place of business. MCIA also provides Approved Facility signs.

**For more information, call MCIA or visit our web site at [www.mncia.org](http://www.mncia.org).**

## NOXIOUS WEED SEED FREE FORAGE AND MULCH

### What is Noxious Weed Seed Free Forage and Mulch?

This certification program for forage (hay, cubes and pellets) and mulch is designed to limit the spread of noxious weeds. MCIA is designated under Minnesota Law as the official Noxious Weed Seed Free Forage and Mulch Certification Agency in Minnesota. The MCIA program conforms to standards developed by the North American Invasive Species Management Association (NAISMA) which allow properly labeled forage and mulch certified by MCIA to be shipped into restricted areas of the United States and Canada.

### How is Noxious Weed Seed Free Forage and Mulch Certified?

Certification requires fields and storage locations to be inspected by MCIA prior to harvest. Labels with unique serial numbers are issued for forage and mulch production meeting certification standards.

### Who Produces Certified Noxious Weed Seed Free Forage and Mulch?

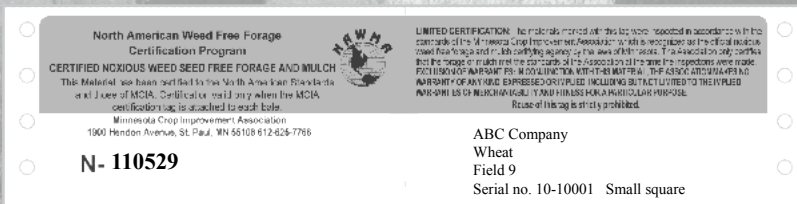

It is produced by conscientious growers who are able to produce forage and mulch that meets program standards. MCIA surveys producers in the fall and spring to determine availability. The survey results are posted on the MCIA website at [www.mncia.org](http://www.mncia.org).

### Why Buy Certified Noxious Weed Seed Free Forage and Mulch?

Buyers are provided assurance that forage and mulch certified through this program is free of noxious weed seeds or other propagating parts. In Minnesota, certified mulch is often required for highway roadside plantings and other re-vegetation projects. Many public lands in the western United States require that hay transported into these areas be certified noxious weed free.

### What Should I Look For?

For certification to be valid, an official certification label must be attached to each bale of forage or mulch.

**For more information, call MCIA or visit our web site at [www.mncia.org](http://www.mncia.org).**

## QUALITY ASSURED SOD

### What is Quality Assured Sod?

The Sod Quality Assurance Program establishes high quality standards for the production and on-going improvement of sod types suitable for installing in challenging environments. The program is a collaborative effort of the Minnesota Sod Producers Association, the University of Minnesota, the Minnesota Department of Transportation (Mn/DOT) and the Minnesota Crop Improvement Association (MCIA).

### How is Sod Quality Assured?

To be Quality Assured, sod must meet specific standards including utilizing approved seed mixes, meeting field requirements and maintaining required documentation. The program provides third party assurance to end users to ensure that sod meets specifications and was produced according to rigorous production standards.

### Who Produces Quality Assured Sod?

Quality Assured sod is produced by careful, conscientious sod producers who utilize approved seed mixtures and required sod production practices to meet program standards.

### Why Utilize Quality Assured Sod?

The first sod type available is salt tolerant sod suitable for use along streets, parking areas and roadsides where saline soil conditions frequently occur. This sod type has been approved by Mn/DOT and will be required where Mn/DOT projects specify salt or shade tolerant sod. It is anticipated that sod products developed through this program will continually evolve and improve as better suited turf seed varieties become available and are utilized to produce sod.

### What Should I Look for?

A Sod Quality Assurance Certificate must accompany each sod delivery as proof of conformance to program standards.

### *Insist on this certificate for assurance of Salt Tolerant Sod*

- Grown from premium quality seed
  - ◆ Selected turf grass varieties
  - ◆ Quality assured seed mixes from approved vendors
- Comprehensive sod production standards
  - ◆ Professionally grown by qualified producers
  - ◆ Stringent sod quality requirements
- Rigorous third party quality assurance process
  - ◆ Seed to harvest oversight
  - ◆ On-site inspections
- Certificate of Assurance with each delivery
  - ◆ Identifies sod that has met all requirements

Program proceeds help fund University of Minnesota research to improve turf and sod performance.

## NATIVE SEED CERTIFICATION

### What is Native Seed Certification?

Native plants are often used for re-vegetation of roadsides, construction sites, wildlife plantings and other projects. MCIA's Native Seed Certification Program verifies that the genetic identity of native grasses and forbs (wildflowers) has been maintained through all phases of seed production.

### How is Native Seed Certified?

The certification process consists of several steps which include seed source verification, inspection of seed production sites and seed testing. MCIA issues seed labels or certificates to producers whose production has met all certification standards.

### Who Produces Native Certified Seed?

Native seed is produced by careful, conscientious growers according to certification standards designed to preserve the genetic identity of native plant species. MCIA surveys producers in the fall and spring to determine availability. The survey results are posted on the MCIA website at [www.mncia.org](http://www.mncia.org).

### Why Buy Certified Native Seed?

Certified native seed provides seed buyers with third party assurance that the genetic identity or source of native grasses and forbs is accurately described on the label.

### What Should I Look For?

Three different germplasm types are possible based on the amount of intentional selection that has taken place. They are:

**Source Identified**, marked with a yellow certification tag.

**Selected** marked with a green certification tag.

**Tested**, marked with a blue certification tag.

Alternatively, a Certification Certificate may be provided as proof of certification to buyers of certified native seed.

**For more information, call MCIA or visit our web site at [www.mncia.org](http://www.mncia.org).**

## **ORGANIC CERTIFICATION SERVICES**

### **Where does MCIA get its authority?**

MCIA is an Accredited Certifying Agent (ACA) authorized by the USDA National Organic Program (NOP). MCIA is authorized to provide organic certification services to crop, wild crop, and livestock producers, as well as handlers and processors.

### **What is organic certification?**

Certification is the process whereby a producer or handler is approved by an ACA as being in compliance with the NOP regulations and is then authorized to sell, label, or represent products as being Certified Organic.

### **Who uses MCIA Organic Certification Services?**

Operations certified by MCIA include food processors, distributors, retailers, agricultural handling facilities, wild crop collectors, livestock producers, and field crop, vegetable, and fruit producers.

### **Why use MCIA as your organic certifier?**

MCIA provides its clients with a user-friendly, efficient, cost-effective certification process. MCIA's service-oriented staff is available to provide prompt, professional assistance to help organic producers and handlers understand organic program requirements and guide them through the organic certification process.

### **How do you complete organic certification?**

The certification process requires an application, inspection, and review to determine if a producer or handler is in compliance with the NOP regulations. Upon completion of the process the operation is then authorized to sell, label, or represent products as being Certified Organic. All operations must apply and be inspected annually.

**For more information, call MCIA or visit our web site at [www.mciaorganic.org](http://www.mciaorganic.org).**

---

---

## ORGANIC SEED USE

---

---

There are often questions regarding the requirement for the use of organic seed and other planting stocks in organic production systems. NOP §205.204 states that an organic “producer must use organically grown seeds, annual seedlings, and planting stock, Except, That, (1) Nonorganically produced, untreated seeds and planting stock may be used to produce an organic crop when an equivalent organically produced variety is not commercially available,” and “(4) Nonorganically produced planting stock to be used to produce a perennial crop may be sold, labeled, or represented as organically produced only after the planting stock has been maintained under a system of organic management for a period of no less than 1 year.”

Most certifiers require organic producers to conduct thorough and diligent searches for organic seed before authorizing the use of non-organic seed. Consult the list of producers in this directory to locate seed and to identify seed conditioners that have been certified to process organic seed. However, not all sources of organic seed are listed and it must be understood that seed availability changes throughout the season. Call MCIA if you need assistance in locating organic seed.

It is important to remember that producing high quality seed (whether conventional or organic) requires planning, use of effective production practices and proper handling and conditioning methods. MCIA provides

certification, quality assurance and other services for seed producers and conditioners and can provide assistance to those interested in getting started in organic seed production. Contact MCIA for information on seed production practices and requirements. MCIA’s web site, [www.mncia.org](http://www.mncia.org), contains information on MCIA programs and services available to seed producers.

Those wishing to offer organic seed for sale must understand and meet federal and state seed law labeling and other requirements pertaining to seed in addition to the organic requirements. For information about selling seed in Minnesota, please refer to the following Minnesota Department of Agriculture web site: <http://www.mda.state.mn.us/licensing/licensetypes/seed.aspx>.

## **Improving Profitability for Soybean Growers.**

Minnesota's soybean farmers invest check-off dollars in research to help producers better manage pests (disease, weed and insects), enhance environmental stewardship, optimize soybean quality and increase soybean yield. By supporting innovative research, the MSR&PC is doing its part to maintain, and increase, producer profitability. Want to learn more? Visit us at [mnsoybean.org](http://mnsoybean.org)

*Brought to you by the wise investment of checkoff dollars.*
