NOTICE TO BUYERS

The Minnesota Crop Improvement Association can assume no financial responsibility for seed or other products listed in this directory or for disagreements over sales which may arise from this list. However, complaints about certified or quality assured products addressed to the Association will be investigated.

Claims over seed performance involving the Minnesota Crop Improvement Association must be addressed as provided in the Minnesota Department of Agriculture Rules for Arbitration of Seed Performance Disputes.

Inquiries regarding product availability should be directed to producers and conditioners listed. Buyers should insist on proof of conformance (e.g., attachment of certification labels to bags or being provided with a certificate of conformance) when purchasing certified or quality assured products.

MINNESOTA CROP IMPROVEMENT ASSOCIATION

ABOUT MCIA

Mission Statement

Minnesota Crop Improvement Association is an organization dedicated to improving the productivity, profitability, and competitive position of producers, processors, and distributors of agricultural products by providing services to enable them to provide high-quality products to Minnesota, the United States, and the World.

Background

Minnesota Crop Improvement Association (MCIA) provides a diverse offering of certification and quality assurance services to a wide array of agricultural and food product producers and handlers. Products certified by MCIA include field crop seed, turf seed, sod, native plant seed, noxious weed seed–free forage and mulch, identity-preserved grains for specialty grain markets, as well as numerous organic crops, livestock, and food products. MCIA also provides customized quality assurance services such as field inspections, seed and grain facility evaluations, as well as other third-party audit and on-site evaluations. MCIA produces and distributes Foundation seed of publicly developed crop varieties and serves as the marketing agent for licensing varieties developed at the University of Minnesota.

MCIA is a 501(c)(5) not-for-profit association funded by service fees. MCIA's offices are located on the Saint Paul campus of the University of Minnesota. MCIA serves its nearly 1,000 members with 18 full-time employees, including 3 field supervisors located at various locations throughout the state. In addition, over 20 part-time employees and contractors assist with field inspections and other seasonal work. MCIA is governed by an 11-member board of directors elected from its membership.

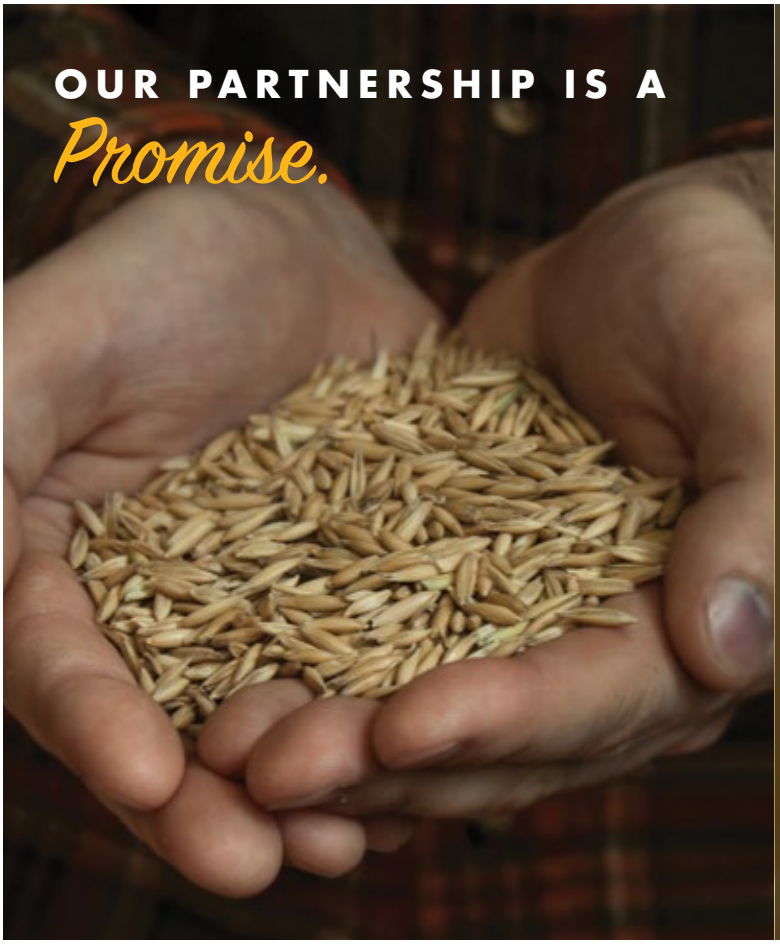
Board of Directors

Kurt Flegel, Danvers, Chairman
Bob Ehlers, Elbow Lake, Vice Chairman
Duane Dahlman, Cokato, Secretary
Darius Thiel, Wendell, Treasurer
Brad Barth, Goodridge
Matt Bohn, Breckenridge
Nancy Jo Ehlke, UMN, Saint Paul
Nat Forster, Hastings
Scott Habstritt, Roseau
Mory Rugg, Sabin
Denise Thiede, Saint Paul

History

MCIA has served the agricultural industry in the Upper Midwest for over 100 years. MCIA was founded in 1903 to promote the breeding, growing, and distribution of improved field crop varieties developed at the University of Minnesota to crop producers throughout the state. A directory of members was first published in 1906 and the publication of a list of those with inspected and approved seed began in 1912. In 1955, the Minnesota Seed Law was amended to officially recognize MCIA as the official seed certifying agency of Minnesota. Over the years, MCIA has expanded its programs and related services to meet the needs of its members and the demands of a changing agricultural and food industry. It was formally designated as the official certification agency in Minnesota for noxious weed seed–free forage and mulch in 1997 and was accredited as an organic certifier under the National Organic Program in 2002.

As an independent third party, MCIA strives to provide superior programs and services to meet the needs of today's changing agricultural world.



OUR PARTNERSHIP IS A *Promise.*

Grain Millers is a family-owned company and has been a leader in organic milling for over 30 years. We depend on direct farmer relationships and offer competitive farm gate pricing, agronomy and sustainability advice, and strong markets for your grains.

When you sell to Grain Millers, you know exactly where your grain is going – directly into some of the most technologically advanced mills in the world!

WE BUY ORGANIC AND CONVENTIONAL NON-GMO:

- Oats
- Corn
- Wheat
- Barley
- Triticale
- Soybeans
- Flax
- Rye

GRAIN MILLERS

GRAIN MILLERS MAKES DECISIONS BASED ON SHARED VALUES AND INVESTS IN WHAT IS GOOD — NOT JUST FOR US, BUT FOR THE FARMERS WE DEPEND ON, THE CUSTOMERS WE SERVE, AND THE WORLD WE ALL LIVE IN.

MINNESOTA CROP
IMPROVEMENT ASSOCIATION

FOUNDATION SEED

Improving your process · Enhancing your products · Increasing your profits

What is Foundation Seed?

Foundation seed is the initial generation of seed in the seed certification program. Foundation seed of crop varieties is planted by seed growers to produce Registered and Certified class seed.

How is Foundation Seed produced?

MCIA's Foundation Seed Services operates under an agreement with the University of Minnesota Agricultural Experiment Station to increase, maintain, and distribute Foundation seed of new and established, publicly developed varieties. MCIA cooperates closely with the University of Minnesota plant breeding programs in soybeans, wheat, barley, oats, and grasses. MCIA also cooperates with similar organizations in neighboring states to supply varieties developed by other public plant breeding programs.

Who is eligible to purchase Foundation Seed?

Foundation seed is available to MCIA members who have previous history producing seed in the certification program. Eligible producers are notified of varieties available and procedures for ordering seed.

What should I look for?

A Foundation Seed certification label must be attached to each container. For seed sold in bulk, a Bulk Sales Certificate must accompany each load of seed.

MINNESOTA CROP IMPROVEMENT ASSOCIATION

VARIETY LICENSING

Improving your process · Enhancing your products · Increasing your profits

What is variety licensing?

Minnesota Crop Improvement Association (MCIA) is the licensing agent for agronomic crops developed at the University of Minnesota. Plant breeders at the University continue to develop new varieties of soybeans, wheat, barley, oats, and grasses. MCIA serves as the primary point of contact for producers and processors interested in new Minnesota varieties.

Why are some varieties licensed?

Crop varieties that are suitable for large-scale commercial production are released as public varieties through the traditional Foundation Seed distribution program. However, many recent releases are food-grade or special-use varieties that require unique production and handling capabilities or access to specialty markets.

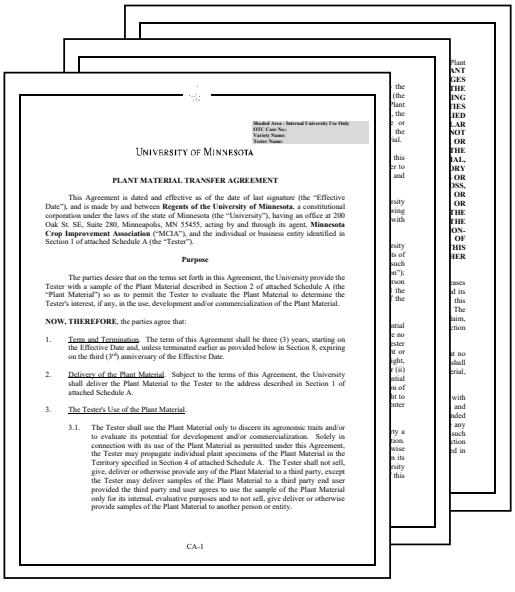
UNIVERSITY OF MINNESOTA
Driven to Discover

Who is eligible to license varieties?

Producers or companies that can demonstrate their capability to successfully produce and commercialize products of the type to be licensed will be considered as licensing partners to the University.

How are varieties licensed?

MCIA provides a Material Transfer Agreement (MTA) which allows an individual or company to evaluate the agronomic traits and to assess the potential for commercialization. Parties interested in licensing may submit a proposal for licensing to MCIA. Proposals are reviewed based on criteria established to identify licensing partners most appropriate for the variety being released.



UNIVERSITY OF MINNESOTA

PLANT MATERIAL TRANSFER AGREEMENT

This Agreement is dated and effective as of the date of last signature (the "Effective Date"), and is made by and between **Regents of the University of Minnesota**, a constitutional corporation under the laws of the state of Minnesota (the "University"), having an office at 200 Oak St. SE, Suite 280, Minneapolis, MN 55455, acting by and through its agent, **Minnesota Crop Improvement Association** ("MCIA"), and the individual or business entity identified in Section 1 of attached Schedule A (the "Tester").

Purpose

The parties desire that on the terms set forth in this Agreement, the University provide the Tester with a sample of the Plant Material described in Section 2 of attached Schedule A (the "Plant Material") so as to permit the Tester to evaluate the Plant Material to determine the Tester's interest, if any, in the use, development and/or commercialization of the Plant Material.

NOW, THEREFORE, the parties agree that:

1. Term and Termination. The term of this Agreement shall be three (3) years, starting on the Effective Date and, unless terminated earlier as provided below in Section 8, expiring on the third (3rd) anniversary of the Effective Date.

2. Delivery of the Plant Material. Subject to the terms of this Agreement, the University shall deliver the Plant Material to the Tester to the address described in Section 1 of attached Schedule A.

3. The Tester's Use of the Plant Material.

   3.1. The Tester shall use the Plant Material only to discern its agronomic traits and/or to evaluate its potential for development and/or commercialization. Solely in connection with its use of the Plant Material as permitted under this Agreement, the Tester may propagate individual plant specimens of the Plant Material in the Territory specified in Section 4 of attached Schedule A. The Tester shall not sell, give, deliver or otherwise provide any of the Plant Material to a third party, except the Tester may deliver samples of the Plant Material to a third party end user provided the third party end user agrees to use the sample of the Plant Material only for its internal, evaluative purposes and to not sell, give deliver or otherwise provide samples of the Plant Material to another person or entity.

PLANT VARIETY PROTECTION

The developer of a new distinct variety may obtain protection for that variety, provided the variety meets the requirements of the Plant Variety Protection Act (PVPA). A certificate is provided to the developer of a variety that grants exclusive rights for reproducing and marketing the seed. The PVPA is administered by the United States Department of Agriculture.

Many of the varieties listed in this publication have either been issued a Certificate of Plant Variety Protection (PVP) or an application has been made for Plant Variety Protection. PVP Title V specifies seed be sold by variety name only as a class of certified seed. If a variety is not protected with the Title V option, the owner of the variety still has the exclusive right to determine who can produce and market the variety as a seed product.

PVP-protected varieties may be saved for your own planting only; you may not provide/sell seed to a neighbor or another party without specific permission of the certificate holder.

Varieties listed on the following page were commonly grown in Minnesota in the last few years. Additions or deletions may occur at any time. It is the responsibility of the buyer and seller to confirm the PVP status of a crop variety before buying or selling a specific variety. It is illegal for anyone to purchase "grain" of a protected variety and utilize it for planting purposes.

Illegal transactions involving PVP-protected varieties may violate federal and state seed laws. In addition, the owner of a protected variety may bring civil action against persons infringing on their rights.

Listed below are types of protection and the appropriate PVP statements.

VARIETIES FOR WHICH PROTECTION IS CONTEMPLATED OR IS APPLIED FOR

"Unauthorized Propagation Prohibited"
U.S. Variety Protection Contemplated (PVP 94)
SEED OF THIS VARIETY MAY BE SOLD
ONLY AS A CLASS OF CERTIFIED SEED.

contemplated

"Unauthorized Propagation Prohibited"
U.S. Variety Protection Applied For (PVP 94)
SEED OF THIS VARIETY MAY BE SOLD
ONLY AS A CLASS OF CERTIFIED SEED.

applied for

VARIETIES FOR WHICH PROTECTION IS GRANTED

"Unauthorized Propagation Prohibited"
U.S. Protected Variety (PVP 94)
SEED OF THIS VARIETY MAY BE SOLD
ONLY AS A CLASS OF CERTIFIED SEED.

with Title V

"Unauthorized Propagation Prohibited"
U.S. Protected Variety (PVP 94)

without Title V

Varieties listed in the following tables were commonly grown in Minnesota in the last two years. The status of the varieties listed below is current as of October 1, 2019.

This is not an all-inclusive list!

Check a variety's PVP status at the following web page:
https://www.ams.usda.gov/services/plant-variety-protection/application-status.

SEED LABORATORY SERVICES

Improving your process · Enhancing your products · Increasing your profits

What is the purpose of the seed laboratory?

The MCIA laboratory tests seed for quality. Germination, physical purity—including other crop and weed contaminants, varietal verification, vigor, and herbicide bioassay tests are conducted by the lab, as well as other crop-specific tests.

Who determines how seed is tested?

The MCIA seed laboratory follows testing rules established by the Association of Official Seed Analysts (AOSA). These rules, used by regulatory agencies and commercial labs throughout the U.S., standardize seed testing procedures for numerous species and are recognized internationally.

Why should my seed be tested?

Seed testing is one of the final steps in the seed certification process. Test results will be used to verify that standards have been met for a particular crop and seed class. Seed lots certified by MCIA are required to be tested at the MCIA seed laboratory, except for native species, which may be tested at an authorized lab. Testing information can also be used for labeling and/or quality assurance. Service testing is available for unconditioned seed and seed that is not in the certification program. A host of tests offered, including germination, vigor, purity, and moisture, can help a seed producer, seller, or buyer assess seed quality.

How do I submit samples?

Sample bags are available from the MCIA office for submitting your samples. Fill the bag up to the top line for large-seeded agronomic crops, and to the middle line for most natives, grasses, and small-seeded legumes. If requesting a moisture test, please provide an additional 500 grams. Include an MCIA Sampling Report, available on our website or from the MCIA office, to provide information about your seed lot and the tests to be conducted on your sample.

What should I look for after testing?

Seed tested as part of certification will receive a Seed Certification Report, indicating the test results and a passed or failed lot status. Preliminary samples, carryover seed, and non-certified seed will receive a Laboratory Report of Analysis, which will indicate the results of the tests requested. You can receive preliminary and final results by e-mail, and a final report will be mailed to you.

Sampled & Analyzed according to AOSA procedures
Unauthorized Propagation Prohibited– U.S. Variety Protection Applied for. To be sold by Variety Name Only as a Class of Certified Seed. PVPA 1994.
Electrophoresis result from South Dakota State University.
This report is not proof of Certification. Bulk Sales Certificates are proof of Certification when certification tags are not used for labeling.
Copies to: XYZ Seed Co. (2207) and Doe, John
Fusarium (scab) infection suspected.
Additional Sender's Information:
Field number(s): 0000-X00X

Lot Status: Passed
Certification of a seed lot is not valid until certification labels are attached to containers or a bulk sales certificate is provided to the bulk seed buyer.

Tests Requested: Electrophoresis, Germination, Purity, Seed count. No other tests requested.

WARRANTY - Minnesota Crop Improvement Association (MCIA) warrants that the test results reported above are those reported by the authorized testing laboratory. These test results have been evaluated by MCIA to determine conformance of the lot to certification standards.
DISCLAIMER OF WARRANTIES. THE ASSOCIATION MAKES NO OTHER WARRANTIES OF ANY KIND, EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

Certified Seed Doesn't Cost...

It Pays!

▲ PROVEN QUALITY

- High germination
- Fewer weed seeds
- Less inert matter
- Less seed-borne disease
- Known varieties

▲ SUPERIOR PERFORMANCE

- Better plantability
- Rapid stand establishment
- More uniform maturity
- Easier harvest
- Less dockage

▲ GREATER PROFITABILITY

- Newest genetics
- Less weed control costs
- Less disease control costs
- Greater yield per acre
- More return on your investment

MINNESOTA CROP
IMPROVEMENT ASSOCIATION

CERTIFIED SEED

Improving your process · Enhancing your products · Increasing your profits

What is seed certification?

Seed certification is an internationally recognized system to preserve the genetic identity and purity of crop varieties.

How is seed certified?

Seed certification requires planting eligible seedstocks, field inspection of the growing crop, proper conditioning, representative sampling, thorough laboratory analysis, and proper labeling.

Who produces certified seed?

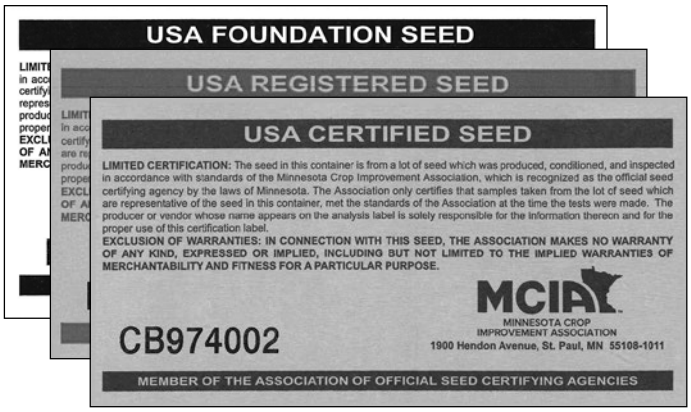
Certified seed is produced by careful, conscientious growers, according to seed certification standards. Seed certification standards and procedures are available from MCIA.

Why buy certified seed?

Seed certification procedures provide the best possible third-party assurance of good quality seed of known identity and purity.

What should I look for?

For certification to be valid, buyers must be provided proof of certification. Seed containers must bear an official certification label. Bulk seed sales must be accompanied by a Bulk Seed Sales Certificate.



BULK SEED SALE CERTIFICATE

BARLEY

NAME, CITY	TELEPHONE	ACREAGE Reg	Cert

Lacey: High yielding variety with improved malting quality characteristics. It is a six-row, smooth awn, white aleurone variety with good kernel plumpness. Lacey is average height with good lodging resistance; resistance to spot blotch and is similar to Robust for scab reaction. Classified as a malting variety by AMBA. Released by Minnesota Agricultural Experiment Station in 2000. License required for seed production. PVP(94) Title V.

Polk County			
Fosston Tri-Coop, Fosston	218-435-6222	30	208
Wilkin County			
Klindt, Eric, Campbell	704-403-3343		140

LCS Odyssey: A two-row spring malting variety with improved preharvest sprouting tolerance, excellent yield potential and naturally lower protein content. LCS Odyssey is rated as Non-GN (zero glycosidic nitrile content) and resistance to Cereal Cyst Nematodes. Marketed in the US by Limagrain Cereal Seeds. A single season use contract is required for production.

Wilkin County			
Kruse & Tischer Farms			
Breckenridge	218-643-1100		58

ND Genesis: A high yielding two-row barley developed for North Dakota and adjacent parts of Minnesota, Montana, and South Dakota. It is medium-late maturity with medium straw strength, semi-smooth awns and long rachilla hairs. ND Genesis is moderately resistant to the net form of net blotch, and moderately resistant to the spot form of net blotch and spot blotch. It has large, plump kernels, low protein, some drought tolerance, accumulates less DON, and has lower beta-glucan values than Pinnacle. Classified as a malting barley by AMBA. Released by the North Dakota Agricultural Experiment Station in 2015. License required for seed production. PVP(94) Title V.

Faust, Kevin, Long Prairie	320-732-3361	39	

Quest: A six-row malting barley with improved *Fusarium* head blight resistance and lower mycotoxin (DON) levels. Quest has a semi-smooth awn, white aluerone and long rachilla hair. It is about the same height as Robust, but taller than Lacey with yield and grain protein levels similar to Tradition and Lacey. Selected by AMBA as a recommended malting variety in December 2010. Released by Minnesota Agricultural Experiment Station in 2010. License required for seed production. PVP(94) Title V.

Freeborn County			
Albert Lea Seed House, Inc			
Albert Lea	507-373-3161		145

Rasmusson: High yielding variety with improved malting quality characteristics. It is a six-row, semi-smooth awn, white aleurone variety with good kernel plumpness. Rasmusson is shorter than most current six-row malting varieties in the Midwest. It has performed well in Minnesota and North Dakota yield trials. It has good lodging resistance, resistance to spot blotch and is similar to Robust for scab reaction. Released by the Minnesota Agricultural Experiment Station in 2008. License required for seed production. PVP(94) Title V.

BARLEY

NAME, CITY	TELEPHONE	ACREAGE Reg	Cert

Royal: Short, six-row, smooth awn, good forage quality. Very good lodging resistance, ideal as a companion crop. Has blue aleurone; not a malting variety but intended as a companion crop for legume establishment or as a feed barley. High in relative feed value. Released by Minnesota Agricultural Experiment Station in 1994. License required for seed production.

Wabasha County
Zabel Seeds, Plainview.....507-534-2498 91

BEANS

Eclipse Black: An early maturing, high yielding black bean with ovoid seed and dull (opaque) black seed coat. Eclipse is approximately three days earlier in maturity than T-39 and exhibits a synchronous plant dry-down at harvest. Eclipse is resistant to bean common mosaic virus, anthracnose race 7 and many races of rust. Released by North Dakota Agricultural Experiment Station. License and royalty agreement from NDSU Research Foundation required for seed production. PVP(94) Title V.

Grant County
Kapphahn, John M
Elbow Lake 218-685-4604 80 95

ND Falcon Pinto: Competitive seed yield compared to other commercial cultivars. Excellent upright architecture. Resistance to rust, resistance to Soybean Cyst Nematode, BCMV (I gene). Uniform drydown. Good canning quality. PVP (94) Title V applied for.

Grant County
Kapphahn, John M
Elbow Lake 218-685-4604 34

ND Palomino Pinto: A slow darkening pinto bean variety with good yield potential, it was released by the North Dakota Agricultural Experiment Station. It has an intermediate growth habit and maturity is similar to commercial checks. ND Palomino is resistant to bean common mosaic virus (BCMV). License and royalty agreement from NDSU Research Foundation required for seed production. PVP(94) Title V is applied for.

BEANS

NAME, CITY	TELEPHONE	ACREAGE Reg	Cert

Red Cedar Dark Red Kidney: A dark red kidney bean variety with good yield potential and is an upright determinate. It is full-season maturity that possesses acceptable canning quality and tolerance to common bacterial blight and root rots. Red Cedar was released by the Michigan State University in 2017. A research fee will be assessed on each unit of certified seed sold. PVP(94) Title V contemplated.

Norman County
Star of the North, Gary..... 218-356-8300 40

Rosie Light Red Kidney: A high yielding, medium late maturity, light red kidney bean released by the North Dakota Agricultural Experiment Station. It is tolerant to the root rot fungal complex commonly present in Minnesota. Rosie is resistant to bean common mosaic virus (BCMV) and is resistant to anthracnose race 73. It has intermediate levels of resistance to common bacterial blight and halo blight. Rosie is a full season variety and not recommended for late planting. License and royalty agreement from NDSU Research Foundation required for seed production. PVP(94) Title V.

Norman County
Star of the North, Gary..... 218-356-8300 60

Talon Dark Red Kidney: A high-yielding, medium maturity, dark red kidney bean released by the North Dakota Agricultural Experiment Station. Talon is tolerant to the root rot fungal complex commonly present in Minnesota. It is resistant to bean common mosaic virus (BCMV) and has shown resistance to the new bean rust race 20-4. Talon is resistant to anthracnose race 73 and has intermediate levels of resistance to common bacterial blight and halo blight. License and royalty agreement from NDSU Research Foundation required for seed production. PVP(94) Title V.

Grant County
Kapphahn, John M

Fosston Tri-Coop, Fosston .... 218-435-6222 — 566

Sumo: An early maturing white oat with a heading date similar to Colt. It is approximately two inches taller than Horsepower, with good lodging resistance. Sumo has average yield with excellent test weight and good milling quality characteristics, groats have medium to low beta-glucan levels. Sumo is resistant to crown rust and smut, but moderately susceptible to barley yellow dwarf virus. Developed by the South Dakota Agricultural Experiment Station. Licensed to Albert Lea Seed House. PVP(94) Title V applied for.

RYE

KWS Bono Hybrid: A hybrid rye that offers high yield performance for wholecrop or grain, with a strong harvest index (grains/ear). KWS Bono is also extremely drought tolerant. Hybrid rye has ultra-low take-all carryover and an ideal addition to all arable rotations. Developed by KWS UK LTD.

IL-Champaign County
KWS Cereals USA, LLC
Champaign 815-200-2666

ND Dylan: A high yielding winter rye variety that has very good winter hardiness. Data gathered over multiple years indicate a yield advantage over current commercial varieties. ND Dylan is a tall variety with good straw strength and medium-late in maturity. Released by the North Dakota Agricultural Experiment Station in 2016. License required for seed production. PVP(94) Title V applied for.

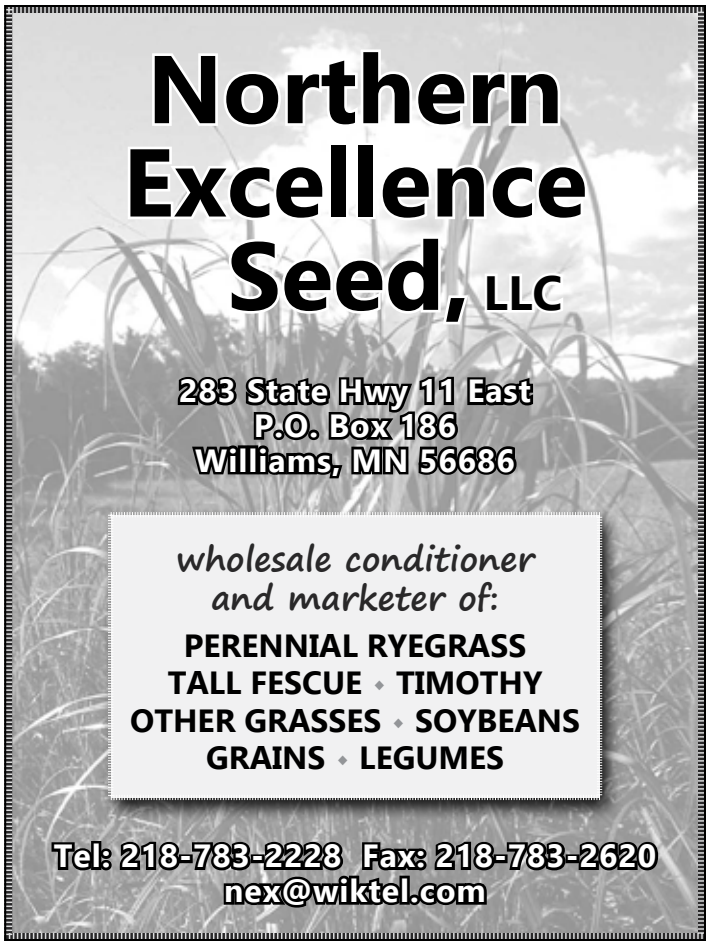
Prosper: A hard red spring wheat variety adapted to eastern North Dakota and western Minnesota. Prosper is intended to provide growers with a very high yielding variety that includes an overall good leaf disease package. It has medium straw strength, semi-dwarf height, and medium maturity. Protein is similar or slightly better than Faller with excellent milling and baking properties. Prosper is moderately resistant to scab and leaf and stem rusts. A joint release from North Dakota and Minnesota in spring 2011. License required for seed production. PVP(94) Title V.

Polk County			
Broadwell, Jeff, Fosston	218-435-2194	144	



NAME, CITY	TELEPHONE	ACREAGE Reg	Cert

Rollag: A unique combination of highest available resistance to *Fusarium* head blight (scab), strong straw, and yield. The scab rating for Rollag is equal to Glenn but Rollag has better yield. It is a medium maturity variety with above average protein and test weight. It is comparable to Barlow for yield, but has much better straw strength. It is resistant to stem rust, with moderate resistance to leaf rust, and moderate resistance to other leaf diseases. Released by the Minnesota Agricultural Experiment Station in 2011. License required for seed production. PVP(94) Title V.

Shelly: A high yielding variety well adapted to the hard red spring wheat growing regions of Minnesota, North Dakota, and South Dakota. Grain yields are comparable to the highest yielding varieties but at a higher protein level. It possesses a good disease resistance package with an excellent rating for resistance to stripe and stem rust with moderate resistance to scab, leaf rust, and bacterial leaf streak. A medium maturity variety, Shelly has good test weight and preharvest sprouting resistance. Released by the Minnesota Agricultural Experiment Station in 2016. License required for seed production. PVP(94) Title V.

SY 611CL2: A hard red spring wheat bred adapted primarily for western areas of North Dakota and Montana. It contains ALS-1 and ALS-3 genes conferring to tolerance to the BASF herbicide 'Beyond'. It has a medium heading, similar to SY Ingmar with medium test weight. It is a standard semi-dwarf, similar in height to SY Soren. Protein levels have been moderate, similar to SY Valda. Overall bread-making characteristics are acceptable. Developed by Syngenta Seeds, Inc. PVP(94) Title V applied for.

The preceding list includes crop varieties and contact information for seed that has been certified or is eligible for certification. All seed, including carryover seed, must be properly labeled according to Minnesota State Seed Law.

Varieties that lead the industry. And lead you to better yields.

With AgriPro® brand wheat varieties continuing to push for genetic diversity, it's no wonder AgriPro makes up the largest portfolio in the wheat industry and consistently ranks in the top yield groups in every region. New releases show improved yield of 3 to 5% over current varieties. It's time to plant top-performing wheat varieties in your field.

New! SY McCloud—Advancing Economic Return

SY Valda—The Yield Warrior

SEED CERTIFICATION—MORE THAN A FIELD INSPECTION

Occasionally someone asking how to complete seed certification or a farmer unfamiliar with the process will comment that their field was inspected and it is now certified. They have to be reminded that the field inspection is just one step in the overall Seed Certification process.

Field Inspection: The process starts with a field inspection application. MCIA staff will verify the seed source used and check the previous crop history. MCIA-trained inspectors will inspect the field to determine if it meets the standards for varietal identity, purity, isolation, and the presence of weeds and other crops.

Congratulations! Your field inspection is complete and you received a report that shows your field passed this first step. ***Now what?***

- **Harvest, Handling, and Storage:** Proper cleaning of harvesting and handling equipment as well as storage bins is essential to maintaining varietal purity. Also, seed is a living organism and proper storage is very important, as high moisture or heating can cause reduced germination.
- **Seed Conditioning:** Certified seed must be conditioned at an MCIA-approved seed conditioning facility. Approved facilities have been inspected by MCIA personnel to determine if they meet the facility and equipment requirements for conditioning a specific crop. When you deliver your seed to the approved seed conditioner take along a copy of your field inspection report.
- **Seed Sampling:** Once the seed is conditioned, an official sample must be taken by approved personnel at the seed conditioning facility or by an MCIA representative.
- **Seed Testing:** The official seed sample must be sent to the MCIA seed laboratory. A germination and purity test are conducted along with any other required tests. Once testing is completed and the results are compared to the appropriate standards, you will receive a certification report indicating if your seed lot passed or failed.
- **Labeling Certified Seed:** Whether you sell the seed yourself or the approved facility is selling the seed, all seed sold must be properly labeled. Depending on how the seed will be distributed, certified seed can be sold using a certification tag or a Bulk Certificate.
- **More to Know:** Most small grain or soybean varieties are protected by the Plant Variety Protection Act (PVPA) or through license agreements, meaning seed sold of those varieties must be certified or sold only with the variety owner's permission. The Minnesota Department of Agriculture also has requirements for labeling and selling seed. For more information please visit https://www.mda.state.mn.us/plants-insects/buying-and-selling-seed-minnesota.
- **Royalties and Fees:** Most crops produced as seed are subject to royalty and/or fee assessments. A seed producer or seller must be sure they understand their obligations regarding the payment of royalties or fees.

These are the key steps in completing seed certification. Visit the MCIA website, www.mncia.org, for more information. Remember, ***seed certification is more than just a field inspection.***

FEE SCHEDULE: VARIETY ASSESSMENT

Varieties not listed here may require a variety assessment fee. Please contact the MCIA office regarding varieties not listed. Fees are on a per bushel basis except where noted.

MINNESOTA CROP IMPROVEMENT ASSOCIATION

QUALITY ASSURED SEED

Improving your process · Enhancing your products · Increasing your profits

What is Quality Assured seed?

Quality Assured (QA) seed has met standards designed to preserve the purity and identity of a crop variety. Standards, similar to seed certification, enable a company to produce and market seed according to sound quality management practices.

How is seed Quality Assured?

The Quality Assurance process includes field inspections, laboratory testing, audits of production records, and on-site evaluations of conditioning and treatment facilities. Seed meeting all requirements is eligible to be labeled with the AOSCA QA logo.

Who produces Quality Assured seed?

Seed producers of all crop types may utilize a QA program to access a complete service for seed sold as varieties, hybrids, brands, or blends. QA programs can be customized to support an existing quality management system or as part of an AOSCA program.

Why buy Quality Assured seed?

Quality Assured seed provides assurance to seed buyers that the seed is of known purity and quality as verified by an unbiased third party.

What should I look for?

Seed meeting QA standards may bear a Quality Assurance label or be marked with a QA logo. Buyers of bulk quality assured seed may be provided with a QA Bulk Sales Certificate.

- MCIA certifies the seed of over **20** crops
- MCIA certifies the genetic origin of over **100** species, grown by over **20** native seed producers
- Minnesota farmers produce over **150,000** acres of certified seed annually
- MCIA approves over **150** seed facilities, which use specialized equipment to clean all kinds of crops
- MCIA certifies more than **500** organic operations in the Upper Midwest
- Each year, MCIA certifies **millions** of pounds of perennial ryegrass and Kentucky bluegrass seed. These two types of grasses are common in many lawns.

MINNESOTA CROP IMPROVEMENT ASSOCIATION

APPROVED FACILITY PROGRAM

Improving your process · Enhancing your products · Increasing your profits

What is the Approved Facility Program?

MCIA's Approved Facility Program provides an evaluation and approval process for facilities processing seed and identity-preserved (IP) grain products. Facilities processing and/or handling products sold under the seed certification, QA seed, and IP grain programs must be inspected and approved by MCIA staff.

How is a facility approved?

To be approved, facilities must meet equipment and labeling requirements appropriate for the seed or grain to be processed. Approval is granted on an annual basis for conditioning, handling, and labeling specific seed types, or for processing grain products for specified end uses.

Why use an approved facility?

Approved facilities are inspected annually to determine their ongoing conformance to requirements necessary to preserve product identity and quality and to assure proper labeling.

What should I look for?

Approved facilities are issued Certificates of Approval annually that are to be prominently posted in their place of business. MCIA also provides Approved Facility signs.

Take Control Of Your Commodity Cleaning

With Crippen Processing Equipment And Expert Project Design From Bjerke Brothers!

Here at Bjerke Brothers, we make it simple to put together your own processing facility for cleaning everything from beans to grain. Not only do we offer legendary Crippen equipment like air/screen cleaners, gravity tables and length graders, but also high-capacity equipment for terminals and large-scale facilities. Best of all, our experienced team can put everything together for you. We'll design the site, manage the project, source and integrate the equipment into a custom processing line, install and commission the equipment, train your operators and finally, provide service after your facility is operational.

Control starts here.
Contact Bjerke Brothers today.

MINNESOTA CROP IMPROVEMENT ASSOCIATION

QUALITY ASSURED SOD

Improving your process · Enhancing your products · Increasing your profits

What is Quality Assured Sod?

The Sod Quality Assurance Program establishes high quality standards for the production and ongoing improvement of sod types suitable for installing in challenging environments. The program is a collaborative effort of the Minnesota Turf Association, the University of Minnesota, the Minnesota Department of Transportation (MnDOT) and the Minnesota Crop Improvement Association (MCIA).

How is sod Quality Assured?

To be Quality Assured, sod must meet specific standards, including using approved seed mixes, meeting field requirements, and maintaining required documentation. The program provides third-party assurance to end users to ensure that sod meets specifications and was produced according to rigorous production standards.

Who produces Quality Assured Sod?

Quality Assured Sod is produced by careful, conscientious sod producers who use approved seed mixtures and follow required sod production practices to meet program standards.

Why use Quality Assured Sod?

Salt tolerant sod is suitable for use along streets, parking areas, and roadsides where saline soil conditions frequently occur. This sod type has been approved by MnDOT and is required where MnDOT projects specify salt- or shade-tolerant sod. Sod products developed through this program will continually evolve and improve as better suited turf seed varieties become available.

What should I look for?

A Sod Quality Assurance Certificate must accompany each sod delivery as proof of conformance to program standards.

All the above sod types are approved for use on MnDOT projects requiring Salt Tolerant Sod. This listing is current as of November 1, 2019. This listing will be periodically updated on the MCIA website, www.mncia.org.

Insist on this certificate for assurance of Salt Tolerant Sod

- Grown from premium quality seed
  - Selected turf grass varieties
  - Quality assured seed mixes from approved vendors
- Comprehensive sod production standards
  - Professionally grown by qualified producers
  - Stringent sod quality requirements
- Rigorous third party quality assurance process
  - Seed to harvest oversight
  - On-site inspections
- Certificate of Assurance with each delivery
  - Identifies sod that has met all requirements

Program proceeds help fund University of Minnesota research to improve turf and sod performance.

SOD QUALITY ASSURANCE PROGRAM

Developed through a collaboration of:

MN Sod Producers Assn, University of Minnesota, Minnesota Department of Transportation and Minnesota Crop Improvement Assn

MINNESOTA CROP IMPROVEMENT ASSOCIATION

NOXIOUS WEED SEED–FREE FORAGE & MULCH

Improving your process · Enhancing your products · Increasing your profits

What is noxious weed seed–free forage and mulch?

The intention of this certification program is to limit the spread of noxious weeds. MCIA is designated under Minnesota law as the state's official Noxious Weed Seed–Free Forage and Mulch Certification Agency. MCIA's program conforms to standards developed by the North American Invasive Species Management Association (NAISMA), which allows properly labeled forage (hay, cubes, and pellets) and mulch certified by MCIA to be shipped into restricted areas of the United States and Canada.

Why buy certified noxious weed seed–free forage and mulch?

Buyers using certified noxious weed seed–free forage and mulch help minimize the spread of noxious weeds onto private and public lands. In Minnesota, certified mulch is often used by government agencies for roadside and other revegetation projects. Most public lands in the western United States require that hay transported into those areas be certified noxious weed seed–free.

How is noxious weed seed–free forage and mulch certified?

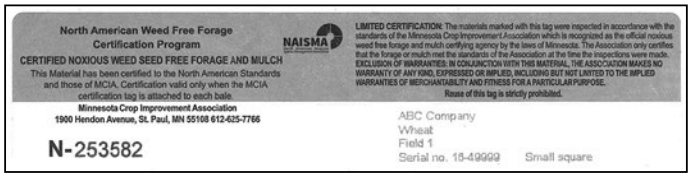
Certification requires that fields and storage sites to be inspected by MCIA within 10 days of harvest. If the fields and sites conform to standards for freedom from noxious and undesirable weeds, the harvested crop will be eligible for certification labels. Producers should apply for field and storage site inspection no later than 30 days prior to crop-cut date.

What should I look for?

MCIA issues tags with unique serial numbers for the labeling of certified forage and mulch production. For certification to be valid, an official certification label (tag) must be securely attached to the eligible product (bale) prior to delivery to the buyer.

Where can I find a list of certified noxious weed seed–free forage and mulch producers?

MCIA surveys eligible producers every spring and fall to determine availability. You'll find the results of those surveys on the MCIA website.



North American Weed Free Forage Certification Program

NAISMA

CERTIFIED NOXIOUS WEED SEED FREE FORAGE AND MULCH

This Material has been certified to the North American Standards and those of MCIA. Certification valid only when the MCIA certification tag is attached to each bale.

Minnesota Crop Improvement Association

NATIVE SEED CERTIFICATION

Improving your process · Enhancing your products · Increasing your profits

What is native seed certification?

Native plants are often used for re-vegetation of roadsides, construction sites, wildlife plantings, and other projects. MCIA's Native Seed Certification Program verifies that the genetic identity of native grasses and forbs (wildflowers) has been maintained through all phases of seed production.

How is native seed certified?

The certification process consists of several steps, including seed source verification, inspection of seed production sites, and seed conditioning and testing. MCIA issues seed labels or certificates to producers whose production has met all certification standards.

Who produces native certified seed?

Native seed is produced by careful, conscientious growers according to certification standards designed to preserve the genetic identity of native plant species. MCIA surveys producers in the fall and spring to determine availability. The survey results are posted on the MCIA web site.

Why buy certified native seed?

Certified native seed provides seed buyers with third-party assurance that the genetic identity or source of native grasses and forbs is accurately described on the label.

What should I look for?

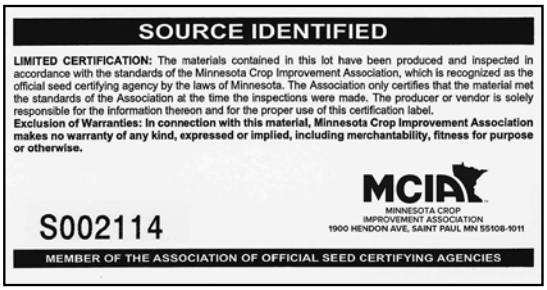
Three different germplasm types are possible based on the amount of intentional selection that has taken place. They are:

Source Identified—yellow certification tag

Selected—green certification tag

Tested—blue certification tag

Alternatively, a Certification Certificate may be provided as proof of certification to buyers of certified native seed.



SOURCE IDENTIFIED

LIMITED CERTIFICATION: The materials contained in this lot have been produced and inspected in accordance with the standards of the Minnesota Crop Improvement Association, which is recognized as the official seed certifying agency by the laws of Minnesota. The Association only certifies that the material met the standards of the Association at the time the inspections were made. The producer or vendor is solely responsible for the information thereon and for the proper use of this certification label.
Exclusion of Warranties: In connection with this material, Minnesota Crop Improvement Association makes no warranty of any kind, expressed or implied, including merchantability, fitness for purpose or otherwise.

MINNESOTA CROP IMPROVEMENT ASSOCIATION

ORGANIC SERVICES

Improving your process · Enhancing your products · Increasing your profits

What is organic certification?

Certification is the process whereby an operation is approved by an Accredited Certifying Agent (ACA) as being in compliance with the USDA National Organic Program regulations and is then authorized to sell, label, or represent products as being "Certified Organic."

Where does MCIA get its authority?

MCIA is an ACA authorized by the USDA National Organic Program. MCIA is authorized to provide organic certification services to producers, handlers and processors, and wild crop harvesters.

Who uses MCIA organic certification services?

Operations certified by MCIA include food processors, distributors, retailers, agricultural handling facilities, wild crop harvesters, livestock producers, and field crop, vegetable, and fruit producers.

Why use MCIA as your organic certifier?

MCIA provides its clients with a user-friendly, efficient, cost-effective certification process. MCIA's service-oriented staff is available to provide prompt, professional assistance to help our clients understand organic program requirements and guide them through the certification process.

How do you complete organic certification?

The organic certification process requires an application, inspection, and review to determine if an operation is in compliance with the National Organic Program regulations. Upon completion of the process the operation is then authorized to sell, label, or represent products as being "Certified Organic." All operations must apply and be inspected annually.

MCIA CERTIFIED ORGANIC

USDA ORGANIC

ORGANIC SEED USE

There are often questions regarding the requirement for the use of organic seed and other planting stocks in organic production systems. NOP §205.204 states that an organic "producer must use organically grown seeds, annual seedlings, and planting stock, Except, That, (1) Nonorganically produced, untreated seeds and planting stock may be used to produce an organic crop when an equivalent organically produced variety is not commercially available," and "(4) Nonorganically produced planting stock to be used to produce a perennial crop may be sold, labeled, or represented as organically produced only after the planting stock has been maintained under a system of organic management for a period of no less than 1 year."

Most certifiers require organic producers to conduct thorough and diligent searches for organic seed before authorizing the use of non-organic seed. Consult the list of producers in this directory to locate seed and to identify seed conditioners that have been certified to process organic seed. However, not all sources of organic seed are listed. It must be understood that seed availability changes throughout the season and year-to-year. Call MCIA if you need assistance in locating organic seed.

It is important to remember that producing high quality seed (whether conventional or organic) requires planning, use of effective production practices and proper handling and conditioning methods. MCIA provides certification, quality assurance and other services for seed producers and conditioners and can provide assistance to those interested in getting started in organic seed production. Contact MCIA for information on seed production practices and requirements. MCIA's website, www.mncia.org, contains information on MCIA programs and services available to seed producers.

Those wishing to offer organic seed for sale must understand and meet federal and state seed law labeling and other requirements pertaining to seed in addition to the organic requirements. For information about selling seed in Minnesota, please refer to the following Minnesota Department of Agriculture web page: https://www.mda.state.mn.us/plants-insects/buying-and-selling-seed-minnesota.

MINNESOTA SOYBEAN
RESEARCH & PROMOTION COUNCIL

Improving Profitability for Soybean Growers.

Minnesota's soybean farmers invest check-off dollars in research to help producers better manage pests (disease, weed and insects), enhance environmental stewardship, optimize soybean quality and increase soybean yield. By supporting innovative research, the MSR&PC is doing its part to maintain, and increase, producer profitability. Want to learn more? Visit us at mnsoybean.org

Brought to you by the wise investment of checkoff dollars.
