## NOTICE TO BUYERS

The Minnesota Crop Improvement Association can assume no financial responsibility for seed or other products listed in this directory or for disagreements over sales which may arise from this list. However, complaints about certified or quality assured products addressed to the Association will be investigated.

Claims over seed performance involving the Minnesota Crop Improvement Association must be addressed as provided in the Minnesota Department of Agriculture Rules for Arbitration of Seed Performance Disputes.

Inquiries regarding product availability should be directed to producers and conditioners listed. Buyers should insist on proof of conformance (e.g., attachment of certification labels to bags or being provided with a certificate of conformance) when purchasing certified or quality assured products.

# ABOUT MCIA

---

## Mission Statement

Minnesota Crop Improvement Association is an organization dedicated to improving the productivity, profitability, and competitive position of producers, processors, and distributors of agricultural products by providing services to enable them to provide high-quality products to Minnesota, the United States, and the World.

## Background

Minnesota Crop Improvement Association (MCIA) provides a diverse offering of certification and quality assurance services to a wide array of agricultural and food product producers and handlers. Products certified by MCIA include field crop seed, turf seed, sod, native plant seed, noxious weed seed-free forage and mulch, identity-preserved grains for specialty grain markets, as well as numerous organic crops, livestock, and food products. MCIA also provides customized quality assurance services such as field inspections, seed and grain facility evaluations, as well as other third-party audit and on-site evaluations. MCIA produces and distributes foundation seed of publicly developed crop varieties and serves as the marketing agent for licensing varieties developed at the University of Minnesota.

MCIA is a 501(c)(5) not-for-profit association funded by service fees. MCIA's offices are located on the Saint Paul campus of the University of Minnesota. MCIA serves just over 760 members with 22 full-time employees, including 4 field supervisors located at various locations throughout the state. In addition, 12 part-time employees and contractors assist with field inspections and other seasonal work. MCIA is governed by an 11-member board of directors elected from its membership.

## Board of Directors

**Brad Barth**, Goodridge, Chairman

**Brent Benike**, Baudette, Vice Chairman

**Duane Dahlman**, Cokato, Secretary

**Grant Mehring**, Fargo, ND, Treasurer

**Ryan Anderson**, Jackson

**Nancy Jo Ehlke**, UMN, Saint Paul

**Kelsey Henke**, Saint Peter

**John Kapphahn**, Elbow Lake

**Jake Noll**, Breckenridge

## History

MCIA has served the agricultural industry in the Upper Midwest for over 100 years. MCIA was founded in 1903 to promote the breeding, growing, and distribution of improved field crop varieties developed at the University of Minnesota to crop producers throughout the state. A directory of members was first published in 1906 and the publication of a list of those with inspected and approved seed began in 1912. In 1955, the Minnesota Seed Law was amended to officially recognize MCIA as the official seed certifying agency of Minnesota. Over the years, MCIA has expanded its programs and related services to meet the needs of its members and the demands of a changing agricultural and food industry. It was formally designated as the official certification agency in Minnesota for noxious weed seed-free forage and mulch in 1997 and was accredited as an organic certifier under the National Organic Program in 2002.

As an independent third party, MCIA strives to provide superior programs and services to meet the needs of today's changing agricultural world.

## What is foundation seed?

Foundation seed is the initial generation of seed in the seed certification program. Foundation seed of crop varieties is planted by seed growers to produce the registered and/or certified class seed.

## Why does MCIA produce foundation seed?

MCIA's Foundation Seed Services operates under an agreement with the University of Minnesota Agricultural Experiment Station to increase, maintain, and distribute foundation seed of new and established, publicly developed varieties. MCIA cooperates closely with the University of Minnesota plant breeding programs in soybeans, wheat, barley, oats, and grasses. MCIA also cooperates with Foundation Seed organizations in neighboring states to supply varieties developed by other public plant breeding programs.

## How is foundation seed produced?

Much of MCIA's foundation seed is produced under contract with selected growers around the state. Under the direction and supervision of MCIA, these growers are responsible for production, harvesting, conditioning, and distributing foundation seed. MCIA also produces small seed increases on the St. Paul campus and conditions them at the MCIA seed facility in St. Paul.

## Who is eligible to purchase foundation seed?

Foundation seed is available to MCIA members who have previous history producing seed in the certification program. Eligible producers are notified of varieties available and procedures for ordering seed.

## What should I look for?

A foundation seed certification label must be attached to each container. For seed sold in bulk, a Bulk Sales Certificate must accompany each load of seed.

**USA FOUNDATION SEED**

LIMITED CERTIFICATION: The seed in this container is from a lot of seed which was produced, conditioned, and inspected in accordance with standards of the Minnesota Crop Improvement Association, which is recognized as the official seed certifying agency by the laws of Minnesota. The Association only certifies that samples taken from the lot of seed which are representative of the seed in this container, met the standards of the Association at the time the tests were made. The producer or vendor whose name appears on the analysis label is solely responsible for the information thereon and for the proper use of this certification label.

EXCLUSION OF WARRANTIES: IN CONNECTION WITH THIS SEED, THE ASSOCIATION MAKES NO WARRANTY OF ANY KIND, EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

## What is variety licensing?

Minnesota Crop Improvement Association (MCIA) is the licensing agent for agronomic crops developed at the University of Minnesota. Plant breeders at the University continue to develop new varieties of soybeans, wheat, barley, oats, and grasses. MCIA serves as the primary point of contact for producers and processors interested in new Minnesota varieties.

## Why are some varieties licensed?

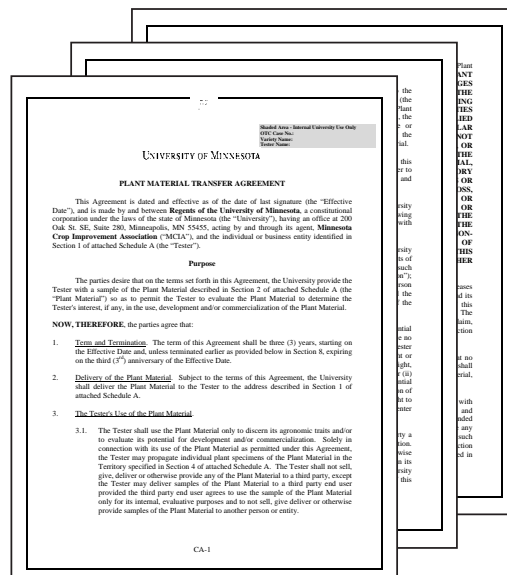

Crop varieties that are suitable for large-scale commercial production are released as public varieties through the traditional Foundation Seed distribution program. However, many releases are food-grade or special-use varieties that require unique production and handling capabilities or access to specialty markets.

## Who is eligible to license varieties?

Producers or companies that can demonstrate their capability to successfully produce and commercialize products of the type to be licensed will be considered as licensing partners to the University.

## How are varieties licensed?

MCIA provides a Material Transfer Agreement (MTA) which allows an individual or company to evaluate the agronomic and quality traits in order to assess the potential for commercialization. Parties interested in licensing may submit a proposal for licensing to MCIA. Proposals are reviewed based on criteria established to identify licensing partners most appropriate for the variety being released.

For more information, call MCIA or visit our web site at [www.mncia.org](http://www.mncia.org)

# PLANT VARIETY PROTECTION

---

The developer of a new distinct variety may obtain protection for that variety, provided the variety meets the requirements of the Plant Variety Protection Act (PVPA). A certificate is provided to the developer of a variety that grants exclusive rights for reproducing and marketing the seed. The PVPA is administered by the United States Department of Agriculture.

Many of the varieties listed in this publication have either been issued a Certificate of Plant Variety Protection (PVP) or an application has been made for Plant Variety Protection. PVP Title V specifies seed be sold by variety name only as a class of certified seed. If a variety is not protected with the Title V option, the owner of the variety still has the exclusive right to determine who can produce and market the variety as a seed product.

PVP-protected varieties may be saved for your own planting only; you may not provide/sell/barter/exchange

seed to a neighbor or another party without specific permission of the certificate holder. The export of PVP-protected varieties out of the U. S. is not permitted without the owner's permission.

Varieties listed on the following page were commonly grown in Minnesota in the last few years. Additions or deletions may occur at any time. It is the responsibility of the buyer and seller to confirm the PVP status of a crop variety before buying or selling a specific variety. It is illegal for anyone to purchase "grain" of a protected variety and utilize it for planting purposes.

Illegal transactions involving PVP-protected varieties may violate federal and state seed laws. In addition, the owner of a protected variety may bring civil action against persons infringing on their rights.

Listed below are types of protection and the appropriate PVP statements.

---

### What is the purpose of the MCIA Seed Laboratory?

The MCIA Seed Laboratory tests seed for quality. The lab conducts germination, physical purity (including inert, other crop, and weed contaminant percentages) and noxious weed seed exams, varietal verification, vigor, tetrazolium (TZ), and herbicide bioassay tests, as well as other crop-specific tests.

The MCIA Seed Laboratory is accredited by the USDA Accredited Seed Laboratory (ASL) Program and is Process Verified for germination, physical purity and noxious-weed seed examinations for species contained within the *AOSA Rules for Testing Seeds* and/or Federal Seed Act.

### Who determines how seed is tested?

The MCIA Seed Laboratory follows testing rules established by the Association of Official Seed Analysts (AOSA). The *AOSA Rules for Testing Seeds*, used by regulatory agencies and commercial labs throughout the U.S., standardizes seed testing procedures for numerous species. Other rules may be applied when testing seed intended for export to foreign markets, such as Canada.

### Why should my seed be tested?

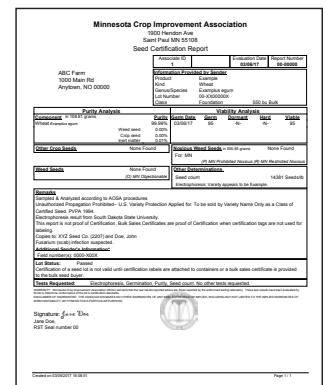

Seed testing is one of the final steps in the seed certification process. Test results will be used to verify that standards have been met for a particular crop and seed class. Seed lots certified by MCIA are required to be tested at the MCIA Seed Laboratory, except for native species, which may be tested at an authorized lab. Testing information can also be used for labeling and/or quality assurance. Service testing is also available for seed that is not in the certification program. A host of tests offered, including germination, vigor, purity, and moisture, can help a seed producer, seller, or buyer assess seed quality.

### How do I submit samples?

Sample bags are available from the MCIA Office for submitting your samples. Fill the bag with a representative sample to the top line for large seeded agronomic crops, and to the middle line for most natives, grasses, and small-seeded legumes. Include an MCIA Sampling Report, available on our website or from the MCIA Office, providing seed lot information and indicating the tests to be conducted on your sample.

### What should I look for after testing?

Seed tested as part of certification will receive a Seed Certification Report, indicating the test results and a passed or failed lot status. Preliminary samples, carryover seed, and non-certified seed will receive a Laboratory Report of Analysis, which will indicate the results of the tests requested. You can receive preliminary and final results by e-mail, and a final report will be mailed to you.

# CERTIFIED SEED

Improving your process · Enhancing your products · Increasing your profits

## What is seed certification?

Seed certification is an internationally recognized system to preserve the genetic identity and purity of crop varieties.

## How is seed certified?

Seed certification requires planting eligible seedstocks, field inspection of the growing crop, proper conditioning, representative sampling, thorough laboratory analysis, and proper labeling.

## Who produces certified seed?

Certified seed is produced by careful, conscientious growers, according to seed certification standards. Seed certification standards and procedures are available from MCIA.

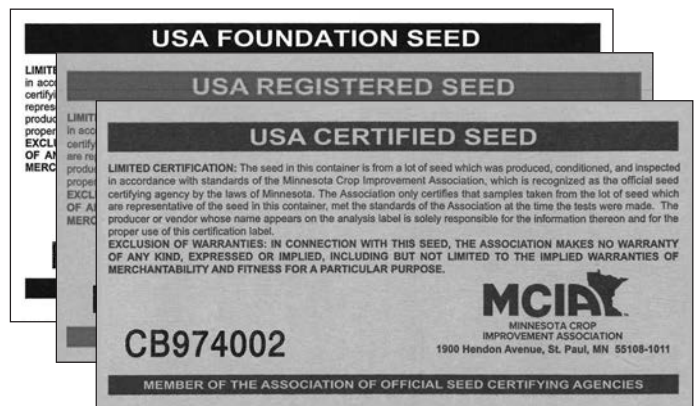

## Why buy certified seed?

Seed certification procedures provide the best possible third-party assurance of good quality seed of known identity and purity.

## What should I look for?

For certification to be valid, buyers must be provided proof of certification. Seed containers must bear an official certification label. Bulk seed sales must be accompanied by a Bulk Seed Sales Certificate.

**MCIA**  
MINNESOTA CROP IMPROVEMENT ASSOCIATION

**BULK SEED SALE CERTIFICATE**

1900 Hendon Avenue, St. Paul, MN 55108 • Tel: 612-625-7766 • Fax: 612-625-7748 • mncia@mncia.org • www.mncia.org

A Bulk Seed Sale Certificate is provided to buyers of bulk certified or QA seed at the time the seed is delivered and serves as the legally required label and proof of certification or quality assurance (QA).

**BARLEY**

NAME, CITY	TELEPHONE	ACREAGE	
		Reg	Cert

**Lacey:** High yielding variety with improved malting quality characteristics. It is a six-row, smooth awn, white aleurone variety with good kernel plumpness. Lacey is average height with good lodging resistance; resistance to spot blotch and is similar to Robust for scab reaction. Classified as a malting variety by AMBA. Released by Minnesota Agricultural Experiment Station in 2000. License required for seed production.

**Roseau County**

Erickson, Douglas, Roseau....218-469-2660 25

**Todd County**

Faust, Kevin, Long Prairie.....320-732-3361 46

**ND Genesis:** A high yielding two-row barley developed for North Dakota and adjacent parts of Minnesota, Montana, and South Dakota. It is medium-late maturity with medium straw strength, semi-smooth awns, and long rachilla hairs. ND Genesis is moderately resistant to the net form of net blotch, and moderately resistant to the spot form of net blotch and spot blotch. It has large, plump kernels, low protein, some drought tolerance, accumulates less DON, and has lower beta-glucan values than Pinnacle. Classified as a malting barley by AMBA. Released by the North Dakota Agricultural Experiment Station in 2015. License required for seed production. PVP(94) Title V.

**Clay County**

Olek, Bradley, Felton.....218-494-3440 75

**Freeborn County**

Albert Lea Seed House, Inc  
Albert Lea .....507-373-3161 40 20

**Wilkin County**

Scheffler, Richard  
Barnesville.....218-493-4456 84

**Quest:** A six-row malting barley with improved Fusarium head blight resistance and lower mycotoxin (DON) levels. Quest has a semi-smooth awn, white aleurone and long rachilla hair. It is about the same height as Robust, but taller than Lacey with yield and grain protein levels similar to Tradition and Lacey. Selected by AMBA as a recommended malting variety in December 2010. Released by Minnesota Agricultural Experiment Station in 2010. License required for seed production. PVP(94) Title V.

**Freeborn County**

Albert Lea Seed House, Inc  
Albert Lea .....507-373-3161 28 90

**Rasmusson:** High yielding variety with improved malting quality characteristics. It is a six-row, semi-smooth awn, white aleurone variety with good kernel plumpness. Rasmusson is shorter than most current six-row malting varieties in the Midwest. It has performed well in Minnesota and North Dakota yield trials. It has good lodging resistance, resistance to spot blotch, and is similar to Robust for scab reaction. Released by the Minnesota Agricultural Experiment Station in 2008. License required for seed production. PVP(94) Title V.

**Polk County**

Capistran Seed Company  
Crookston ..... 218-891-7840 145

**BARLEY**

NAME, CITY	TELEPHONE	ACREAGE	
		Reg	Cert

**Robust:** Medium yield and maturity, colorless aleurone, six-row, semi-smooth awn, short rachilla hairs. Good lodging resistance and kernel plumpness. Resistant to spot blotch. Classified as a malting variety by AMBA. Released by Minnesota Agricultural Experiment Station in 1983.

**Freeborn County**

Albert Lea Seed House, Inc  
Albert Lea .....507-373-3161 42 12

**Meeker County**

Peterson, Russell M  
Grove City..... 320-877-7793

**Roseau County**

Erickson, Douglas, Roseau....218-469-2660 37

**Royal:** Short, six-row, smooth awn, good forage quality. Very good lodging resistance, ideal as a companion crop. Has blue aleurone; not a malting variety but intended as a companion crop for legume establishment or as a feed barley. High in relative feed value. Released by Minnesota Agricultural Experiment Station in 1994. License required for seed production.

**Wabasha County**

Zabel Seeds, Plainview.....507-534-2498 64

**Tradition:** Six-row, medium-early maturity variety. It is medium-short in height and has very strong straw. Tradition has a nodding head type, semi-smooth awns, long rachilla hairs, and white aleurone. Tradition has excellent agronomic performance and malt quality, and is well adapted to Minnesota, North Dakota, Idaho, and Montana. Classified as a malting variety by AMBA and developed by Busch Agricultural Resources. License required for seed production. PVP(94) Title V.

## BARLEY, WINTER

NAME, CITY	TELEPHONE	ACREAGE	
		Reg	Cert

**MN-Equinox:** A six-row winter barley variety. MN-Equinox is facultative, meaning it can be planted in either the spring or fall. Released by the Minnesota Agricultural Experiment Station. Special license required for seed production. PVP(94) Title V contemplated.

### Freeborn County

Albert Lea Seed House, Inc  
 Albert Lea ..... 507-373-3161 29

### Lincoln County

OCF Seeds, Hendricks ..... 605-690-0918 8

## BEANS

**Eclipse Black:** An early maturing, high yielding black bean with ovoid seed and dull (opaque) black seed coat. Eclipse is approximately three days earlier in maturity than T-39 and exhibits a synchronous plant dry-down at harvest. Eclipse is resistant to bean common mosaic virus, anthracnose race 7 and many races of rust. Released by North Dakota Agricultural Experiment Station. License and royalty agreement from NDSU Research Foundation required for seed production. PVP(94) Title V.

### Grant County

Kapphahn, John M  
 Elbow Lake ..... 218-685-4604 65

## BIRDSFOOT TREFOIL

**Norcen:** Broad leaved type with intermediate growth habit. Flowers earlier than Carroll but later than Viking. Less winter-hardy than Leo and Carroll. Developed cooperatively by Experiment Stations of the North Central states. Released in 1981.

### Roseau County

Pieper Farm, Daniel  
 Roosevelt ..... 218-556-0755

## BUCKWHEAT

NAME, CITY	TELEPHONE	ACREAGE	
		Reg	Cert

**Koto:** A diploid, open-pollinated buckwheat variety. The leaf blade is arrow-shaped. Intensity of anthocyanin coloration of the flower buds is very weak to weak. Koto has terminal umbels which are loose to semi-compact in density and single axillary racemes. The flower type for Koto is heteromorphic. The very well filled (rounded) seeds of Koto are black with flanges.

### Roseau County

Estling Farms, Roosevelt ..... 218-242-1556 30

## KENTUCKY BLUEGRASS

**Park:** Excellent seedling vigor, moderate resistance to rust, susceptible to mildew. Good forage and seed producer. Makes tough, durable sod. Released by the Minnesota Agricultural Experiment Station in 1957.

### Roseau County

**Sumo:** An early maturing white oat with a heading date similar to Colt. It is approximately two inches taller than Horsepower, with good lodging resistance. Sumo has average yield with excellent test weight and good milling quality characteristics, groats have medium to low beta-glucan levels. Sumo is resistant to crown rust and smut, but moderately susceptible to barley yellow dwarf virus. Developed by the South Dakota Agricultural Experiment Station. Licensed to Albert Lea Seed House. PVP(94) Title V.

Wolverton Farm Supply (Ross E Aigner) Wolverton .....	701-367-4133	38	76

**MN-Washburn:** A hard red spring selected for straw strength, yield, disease tolerance, and milling and baking quality. Adaptable to Minnesota and the Dakotas. It has resistance to preharvest sprouting and very good lodging resistance. MN-Washburn has a very good combination of overall disease resistance, including very good ratings for bacterial leaf streak and Fusarium head blight, and excellent ratings for leaf rust and stripe rust. In addition, it contains the bdv2 gene for resistance to barley yellow dwarf virus. Released by the Minnesota Agricultural Experiment Station in 2019. PVP(94) Title V.

### Roseau County

C & S Habstritt Inc, Roseau ..... 218-463-1193 73

**Shelly:** A high yielding variety well adapted to the hard red spring wheat growing regions of Minnesota, North Dakota and South Dakota. Grain yields are comparable to the highest yielding varieties but at a higher protein level. It possesses a good disease resistance package with an excellent rating for resistance to stripe and stem rust with moderate resistance to scab, leaf rust, and bacterial leaf streak. A medium maturity variety, Shelly has good test weight and preharvest sprouting resistance. Released by the Minnesota Agricultural Experiment Station in 2016. License required for seed production. PVP(94) Title V.

### Red Lake County

Myhre Farms  
Red Lake Falls ..... 218-698-4615 120  
Vatthauer Farm  
Red Lake Falls ..... 218-253-2490 156

**SY 611CL2:** A hard red spring wheat bred adapted primarily for western areas of North Dakota and Montana. It contains ALS-1 and ALS-3 genes conferring to tolerance to the BASF herbicide 'Beyond'. It has a medium heading, similar to SY Ingmar with medium test weight. It is a standard semi-dwarf, similar in height to SY Soren. Protein levels have been moderate, similar to SY Valda. Overall bread-making characteristics are acceptable. Developed by Syngenta Seeds, Inc. PVP(94) Title V.

### Kittson County

Kennedy Seed Co., Hallock... 218-526-0239

### Polk County

AgriMAX, Fisher..... 218-891-2211

**SY Valda:** A hard red spring wheat best adapted to the spring wheat growing areas of North Dakota and Minnesota. It was selected for height and leaf rust resistance. SY Valda is moderately resistant to stem rust and leaf rust. Developed by Syngenta Seeds, Inc. PVP(94) Title V.

## WHEAT, DURUM

**ND Stanley:** A durum wheat variety with high yield potential, combined with strong straw and good quality protein content. ND Stanley has high test weight, large kernels, medium height, average maturity, and is resistant to both leaf and stem rust diseases. Released by the North Dakota Agricultural Experiment Station. PVP(94) Title V.

#### Pennington County

Scholin Farms

Thief River Falls .....218-964-5268    24

## WINTER WHEAT

**Ideal:** A hard red winter wheat with high grain yield and adaptation to the northern winter wheat production area. It exhibits good winter hardiness and excellent resistance to lodging. Ideal is moderately susceptible to stripe rust and susceptible to head scab, but it exhibits moderate resistance to tan spot, leaf and stem rust. Released by the South Dakota Agricultural Experiment Station in 2011. License required for seed production. PVP(94) Title V.

# Certified Seed Doesn't Cost...

# It Pays!

## ▲ PROVEN QUALITY

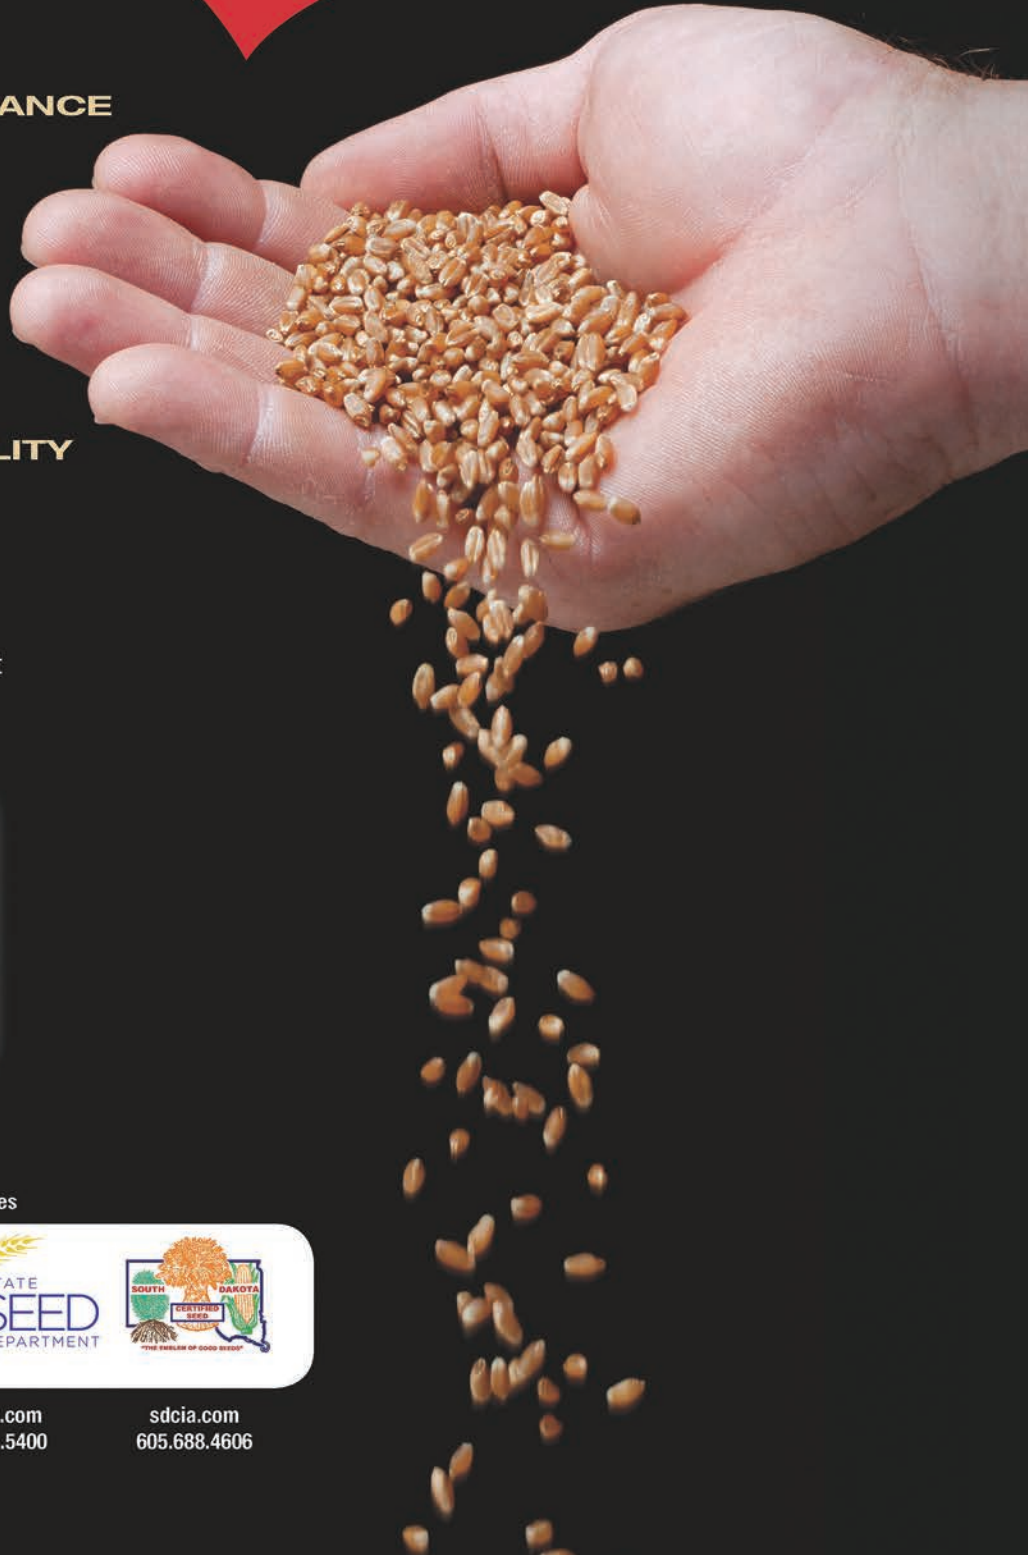

- High germination
- Fewer weed seeds
- Less inert matter
- Less seed-borne disease
- Known varieties

## ▲ SUPERIOR PERFORMANCE

- Better plantability
- Rapid stand establishment
- More uniform maturity
- Easier harvest
- Less dockage

## ▲ GREATER PROFITABILITY

- Newest genetics
- Less weed control costs
- Less disease control costs
- Greater yield per acre
- More return on your investment

# WHEAT **HARD RED SPRING VARIETIES WITH PROVEN RESULTS**

## VARIETIES THAT COMBINE YIELD, QUALITY AND PERFORMANCE

### MN-ROTHSAY

Excellent yields  
Very good straw strength  
Above average protein  
Good pre-harvest sprout rating

### MN-TORGY

High yielding  
Very good protein  
Good scab and BLS resistance  
Well adapted to MN, ND and SD

## OTHER UNIVERSITY OF MINNESOTA DEVELOPED VARIETIES

### BOLLES

Superior protein  
High baking quality

### LINKERT

Very strong straw  
High protein

### SHELLY

Very high yielding  
Good pre-harvest sprout rating

### MN-WASHBURN

Good yield  
Strong straw

Visit the Minnesota Agricultural Experiment Station at [maes.umn.edu](http://maes.umn.edu) or check your state or local variety trials. For a list of seed producers, visit the Minnesota Crop Improvement Association at [mncia.org](http://mncia.org) or call 1-800-510-6242.

Hard Red Spring Wheat

# AP Smith Stands Strong

- ❑ Superior straw strength and medium-late maturity
- ❑ Widely adapted—impressive performance across the Northern Plains
- ❑ High protein type with high yield potential for maximum economic returns
- ❑ Very good bacterial leaf streak tolerance

# SEED CERTIFICATION—MORE THAN A FIELD INSPECTION

---

Occasionally someone asking how to complete seed certification or a farmer unfamiliar with the process will comment that their field was inspected and it is now certified. They have to be reminded that the field inspection is just one step in the overall Seed Certification process.

**Field Inspection:** The process starts with a field inspection application. MCIA staff will verify the seed source used and check the previous crop history. MCIA-trained inspectors will inspect the field to determine if it meets the standards for varietal identity, purity, isolation, and the presence of weeds and other crops.

Congratulations! Your field inspection is complete and you received a report that shows your field passed this first step. **Now what?**

- **Harvest, Handling, and Storage:** Proper cleaning of harvesting and handling equipment as well as storage bins is essential to maintaining varietal purity. Also, seed is a living organism and proper storage is very important, as high moisture or heating can cause reduced germination.
- **Seed Conditioning:** Certified seed must be conditioned at an MCIA-approved seed conditioning facility. Approved facilities have been inspected by MCIA personnel to determine if they meet the facility and equipment requirements for conditioning a specific crop. When you deliver your seed to the approved seed conditioner take along a copy of your field inspection report.
- **Seed Sampling:** Once the seed is conditioned, an official sample must be taken by approved personnel at the seed conditioning facility or by an MCIA representative.
- **Seed Testing:** The official seed sample must be sent to the MCIA seed laboratory.

A germination and purity test are conducted along with any other required tests. Once testing is completed and the results are compared to the appropriate standards, you will receive a certification report indicating if your seed lot passed or failed.

- **Labeling Certified Seed:** Whether you sell the seed yourself or the approved facility is selling the seed, all seed sold must be properly labeled. Depending on how the seed will be distributed, certified seed can be sold using a certification tag or a Bulk Certificate.
- **More to Know:** Most small grain or soybean varieties are protected by the Plant Variety Protection Act (PVPA) or through license agreements, meaning seed sold of those varieties must be certified or sold only with the variety owner's permission. The Minnesota Department of Agriculture also has requirements for labeling and selling seed. For more information please visit <https://www.mda.state.mn.us/plants-insects/buying-and-selling-seed-minnesota>.
- **Royalties and Fees:** Most crops produced as seed are subject to royalty and/or fee assessments. A seed producer or seller must be sure they understand their obligations regarding the payment of royalties or fees.

These are the key steps in completing seed certification. Visit the MCIA website, [www.mncia.org](http://www.mncia.org), for more information.

Remember, ***seed certification is more than just a field inspection.***

Improving your process · Enhancing your products · Increasing your profits

## What is quality assured seed?

Quality assured (QA) seed has met standards designed to preserve the purity and identity of a crop variety. Standards, similar to those applied in seed certification, enable a company to produce and market seed according to sound quality management practices.

## How is seed quality assured?

The quality assurance process includes field inspections, laboratory testing, audits of production records, and on-site evaluations of conditioning and treatment facilities. Seed meeting all requirements is eligible to be labeled with the AOSCA QA logo.

## Who produces quality assured seed?

Seed producers of all crop types may use a QA program to access a complete service for seed sold as varieties, hybrids, brands, or blends.

QA programs can be customized to support an existing quality management system or as part of an AOSCA program.

## Why buy quality assured seed?

Quality assured seed provides assurance to seed buyers that the seed is of known purity and quality as verified by an unbiased third party.

## What should I look for?

Seed meeting QA standards may bear a quality assurance label or be marked with a QA logo. Buyers of bulk quality assured seed may be provided with a QA Bulk Sales Certificate.

For more information, call M CIA or visit our web site at [www.mncia.org](http://www.mncia.org)

## *Fast Facts*

- ▶ MCIA certifies the seed of over **20** agronomic crops
- ▶ MCIA certifies the genetic origin of the seed of over **150** native species
- ▶ Minnesota farmers produce over **140,000** acres of certified seed annually
- ▶ MCIA approves approximately **180** seed facilities, which use specialized equipment to clean all kinds of crops
- ▶ MCIA certifies more than **500** organic operations in the Upper Midwest
- ▶ Each year, MCIA certifies **millions** of pounds of perennial ryegrass, tall fescue, and Kentucky bluegrass seed, grasses that are common in lawns.

MINNESOTA CROP  
IMPROVEMENT ASSOCIATION

## FIELD SERVICES

Improving your process · Enhancing your products · Increasing your profits

### Who We Are

Founded in 1903, the Minnesota Crop Improvement Association has a long history of leadership in the seed industry and agriculture. MCIA's Field Services department continues that tradition by innovating to meet the needs of its members for impartial field inspection and facility production services.

MCIA is able to efficiently conduct and promptly complete on-site and field evaluations throughout the state, making us an ideal service provider for Minnesota ag producers. When work extends beyond the state's borders, MCIA partners with other AOSCA-member agencies.

MCIA's well trained staff has decades of experience in seed and identity preserved grain production. Our staff is trained in ISO and HACCP systems and is experienced with digital reporting technology.

### Our Services

MCIA offers industry-leading expertise in seed varietal purity and seed quality. Our services include seed certification, quality assurance, and customized, company-specific inspections.

Businesses large and small use MCIA's field inspection services. Our "boots on the ground" staff has experience with all kinds of inspections, from small plots to large acres:

- Stand inspections
- Flower inspections
- Post-herbicide spray inspections
- Pre-harvest seed quality inspections
- Independent, third-party, trait stewardship field and facility verification and audits

To discuss how MCIA can best serve the needs of your business, please contact Field Services Manager Kris Folland by telephone, 218-791-2156, or email, [kris.folland@mncia.org](mailto:kris.folland@mncia.org).

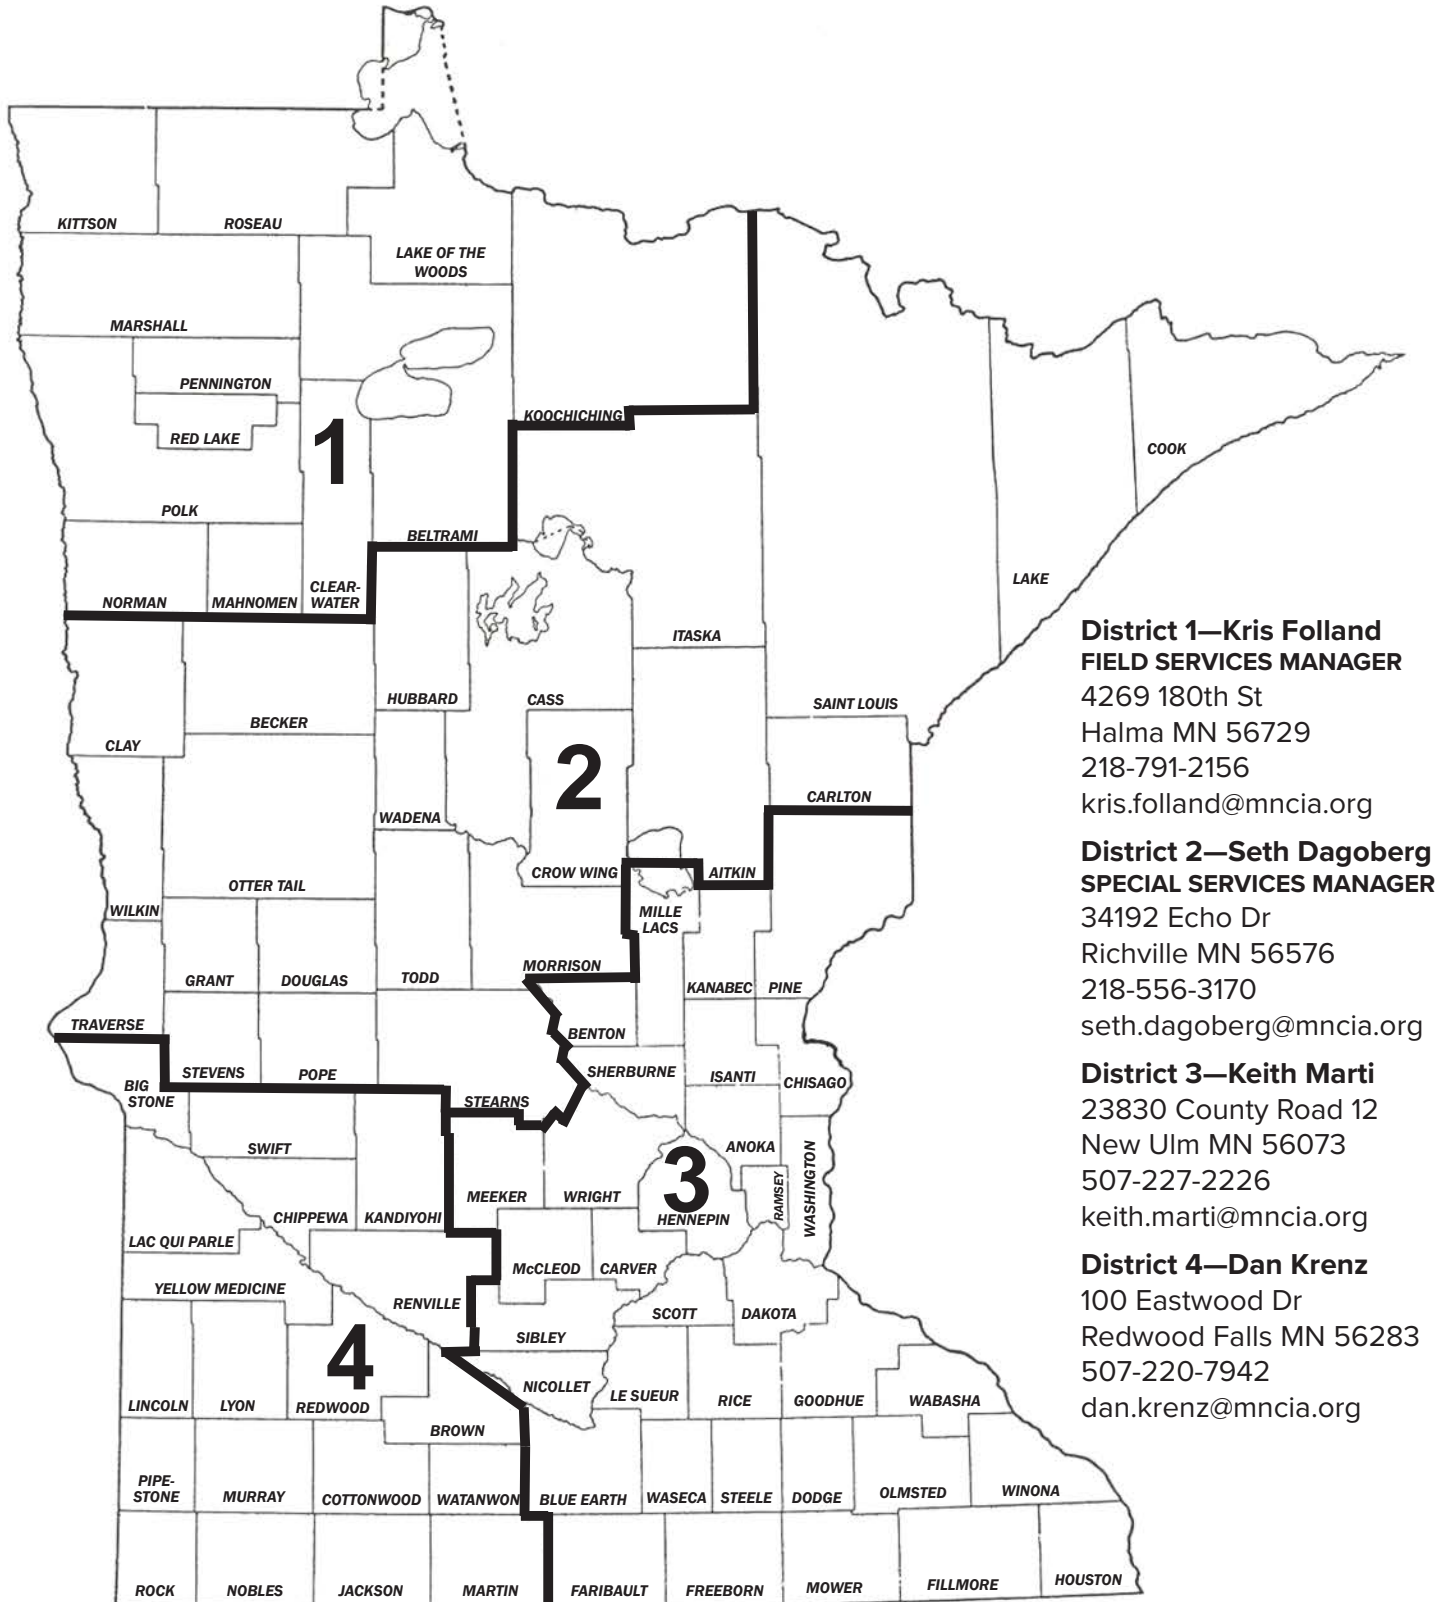

For more information, call MCIA or visit our web site at [www.mncia.org](http://www.mncia.org)

## What is native seed certification?

Native plants are often used for re-vegetation of roadsides, construction sites, wildlife plantings, and other projects. MCIA's Native Seed Certification Program verifies that the genetic identity of native grasses and forbs (wildflowers) has been maintained through all phases of seed production.

## How is native seed certified?

The certification process consists of several steps, including seed source verification, inspection of seed production sites, and seed conditioning and testing. MCIA issues seed labels or certificates to producers whose production has met all certification standards.

## Who produces native certified seed?

Native seed is produced by careful, conscientious growers according to certification standards designed to preserve the genetic identity of native plant species.

## Why buy certified native seed?

Certified native seed provides seed buyers with third-party assurance that the genetic identity or source of native grasses and forbs is accurately described on the label.

## What should I look for?

Three different germplasm types are possible based on the amount of intentional selection that has taken place. They are:

**Source Identified**—yellow certification tag

**Selected**—green certification tag

**Tested**—blue certification tag

Alternatively, a Certification Certificate may be provided as proof of certification to buyers of certified native seed.

For more information, call MCIA or visit our web site at [www.mncia.org](http://www.mncia.org)

## What is the Approved Facility Program?

MCIA's Approved Facility Program provides an evaluation and approval process for facilities processing seed and identity-preserved (IP) grain products. Facilities processing and/or handling products sold under the seed certification, QA seed, and IP grain programs must be inspected and approved by MCIA staff.

## How is a facility approved?

To be approved, facilities must meet equipment and labeling requirements appropriate for the seed or grain to be processed. Approval is granted on an annual basis for conditioning, handling, and labeling specific seed types, or for processing grain products for specified end uses.

## Why use an approved facility?

Approved facilities are inspected annually to determine their ongoing conformance to

requirements necessary to preserve product identity and quality and to assure proper labeling.

## What should I look for?

Approved facilities are issued Certificates of Approval annually that are to be prominently posted in their place of business. MCIA also provides Approved Facility signs.

For more information, call MCIA or visit our web site at [www.mncia.org](http://www.mncia.org)

# Take Control Of Your Commodity Cleaning

**With State-Of-The-Art Processing Equipment And  
Expert Project Design From Bjerke Brothers!**

Here at Bjerke Brothers, we make it simple to put together your own processing facility for cleaning everything from beans to grain. We have more than 40 years of experience, and that allows us to identify and supply the best combination of equipment for your cleaning and conditioning demands. Our team can design the site, manage the project, install and commission the equipment, train your operators and finally, provide service after your facility is operational.

**Control starts here.**

**What is quality assured sod?**

The Sod Quality Assurance Program establishes high quality standards for the production and ongoing improvement of sod types suitable for installing in challenging environments. The program is a collaborative effort of the Minnesota Turf Association, the University of Minnesota, the Minnesota Department of Transportation (MnDOT), and the Minnesota Crop Improvement Association.

**How is sod quality assured?**

To be quality assured, sod must meet specific standards, which include using approved seed mixes, meeting field requirements, and maintaining required documentation. The program provides third-party assurance to end users to ensure that sod meets specifications and was produced according to rigorous production standards.

**Who produces quality assured Sod?**

Quality assured sod is produced by careful, conscientious sod producers who make use of

approved seed mixtures and follow required sod production practices to meet program standards.

**Why use quality assured sod?**

Salt-tolerant sod is suitable for use along streets, parking areas, and roadsides where saline soil conditions frequently occur. This sod type has been approved by MnDOT and is required where MnDOT projects specify salt- or shade-tolerant sod. Sod products developed through this program will continually evolve and improve as better suited turf seed varieties become available.

**What should I look for?**

A Sod Quality Assurance Certificate must accompany each sod delivery as proof of conformance to program standards.

[www.mncia.org](http://www.mncia.org)

### *Insist on this certificate for assurance of Salt Tolerant Sod*

- ▶ **Grown from premium quality seed**
  - Selected turf grass varieties
  - Quality assured seed mixes from approved vendors
- ▶ **Comprehensive sod production standards**
  - Professionally grown by qualified producers
  - Stringent sod quality requirements
- ▶ **Rigorous third party quality assurance process**
  - Seed to harvest oversight
  - On-site inspections
- ▶ **Certificate of Assurance with each delivery**
  - Identifies sod that has met all requirements

PROGRAM PROCEEDS HELP FUND UNIVERSITY OF MINNESOTA RESEARCH TO IMPROVE TURF AND SOD PERFORMANCE.

## What is the MnDOT Seed Vendor Program?

The MnDOT Seed Vendor Program is a quality assurance program that ensures seed supplied to the Minnesota Department of Transportation (MnDOT) for use on its roadside revegetation projects meets the specifications of state and federal audit programs.

## What is MCIA's role in the MnDOT Seed Vendor Program?

MCIA is the official entity that provides an evaluation and approval process, with concurrence from MnDOT, for seed vendors producing its seed mixes.

## How is a MnDOT Seed Vendor approved?

MnDOT Seed Vendors are audited and inspected annually to determine their conformance with MnDOT's seed supplier requirements. To be approved, seed vendors must

meet minimum requirements for equipment, seed procurement, records, packaging, and labeling appropriate for seed to be sold for MnDOT projects.

## As a buyer, what should I look for?

Approved MnDOT Seed Vendors are issued "Certificates of Approval" that are to be prominently posted in their place of business. MCIA also provides Approved Facility signs. Approved MnDOT seed mixes must be labeled with an Approved Seed Vendor Tag.

## Where do buyers find a list of MnDOT seed vendors?

A current list of approved MnDOT Seed Vendors can be found on the Where to Buy page of the MCIA website.

## What is noxious weed seed-free forage and mulch?

The intention of this certification program is to limit the spread of noxious weeds. MCIA is designated under Minnesota law as the state's official Noxious Weed Seed-Free Forage and Mulch Certification Agency. MCIA's program conforms to standards developed by the North American Invasive Species Management Association (NAISMA), which allows properly labeled forage (hay, cubes, and pellets) and mulch certified by MCIA to be shipped into restricted areas of the United States and Canada.

## Why buy certified noxious weed seed-free forage and mulch?

Buyers using certified noxious weed seed-free forage and mulch help minimize the spread of noxious weeds onto private and public lands. In Minnesota, certified mulch is often used by government agencies for roadside and other revegetation projects. Most public lands in the western

United States require that hay transported into those areas be certified noxious weed seed-free.

## How is noxious weed seed-free forage and mulch certified?

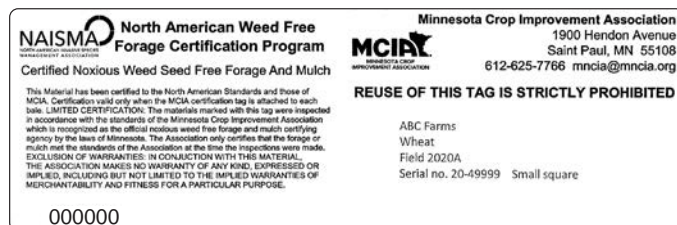

Certification requires that fields and storage sites to be inspected by MCIA within 10 days of harvest. If the fields and sites conform to standards for freedom from noxious and undesirable weeds, the harvested crop will be eligible for certification labels. Producers should apply for field and storage site inspection no later than 30 days prior to crop-cut date.

## What should I look for?

MCIA issues tags with unique serial numbers for the labeling of certified forage and mulch production. For certification to be valid, an official certification label (tag) must be securely attached to the eligible product (bale) prior to delivery to the buyer.

## Where can I find a list of certified noxious weed seed-free forage and mulch producers?

MCIA surveys eligible producers every spring and fall to determine availability. You'll find the results of those surveys on the MCIA website.

For more information, call MCIA or visit our web site at [www.mncia.org](http://www.mncia.org)

## **What is organic certification?**

Certification is the process whereby an operation is approved by an Accredited Certifying Agent (ACA) as being in compliance with the USDA National Organic Program regulations and is then authorized to sell, label, or represent products as being “Certified Organic.”

## **Where does MCIA get its authority?**

MCIA is an ACA accredited by the USDA National Organic Program. MCIA is authorized to provide organic certification services to producers, handlers and processors, and wild crop harvesters.

## **Who uses MCIA organic certification services?**

Operations certified by MCIA include food processors, distributors, retailers, agricultural handling facilities, wild crop harvesters, livestock producers, and field crop, vegetable, and fruit producers.

## **Why use MCIA as your organic certifier?**

MCIA provides its clients with a user-friendly, efficient, cost-effective certification process. MCIA’s service-oriented staff is available to provide prompt, professional assistance to help our clients understand organic program requirements and guide them through the certification process.

## **How do you complete organic certification?**

The organic certification process requires an application, inspection, and review to determine if an operation is in compliance with the National Organic Program regulations. Upon completion of the process and payment of fees due, the operation is then authorized to sell, label, or represent products as being “Certified Organic.” All operations must apply and be inspected annually.

For more information, call MCIA or visit our web site at [www.mncia.org](http://www.mncia.org)

MINNESOTA CROP IMPROVEMENT ASSOCIATION  
1900 HENDON AVE, SAINT PAUL MN 55108

## ORGANIC SEED USE

There are often questions regarding the requirement for the use of organic seed and other planting stocks in organic production systems. NOP §205.204 states that an organic “producer must use organically grown seeds, annual seedlings, and planting stock, *Except*, That, (1) Nonorganically produced, untreated seeds and planting stock may be used to produce an organic crop when an equivalent organically produced variety is not commercially available,” and “(4) Nonorganically produced planting stock to be used to produce a perennial crop may be sold, labeled, or represented as organically produced only after the planting stock has been maintained under a system of organic management for a period of no less than 1 year.” All annual seedlings/transplants must be certified organic.

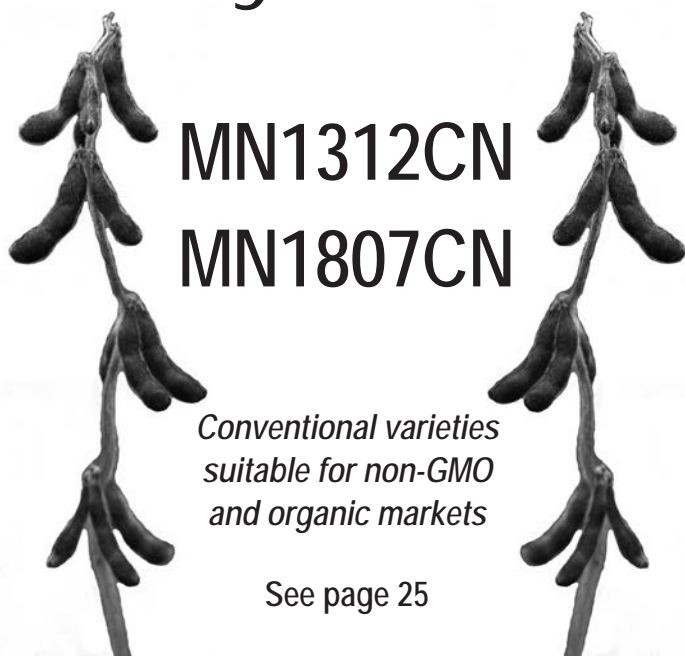

Most certifiers require organic producers to conduct thorough and diligent searches for organic seed before authorizing the use of non-organic seed. Consult the list of producers in this directory to locate seed and to identify seed conditioners that have been certified to process organic seed. Other organic seed sellers can be found on the Internet

or from MCIA. Organic seed availability changes throughout the season and year-to-year. Call MCIA if you need assistance locating organic seed.

It is important to remember that producing high quality seed (whether conventional or organic) requires planning, use of effective production practices, and proper handling and conditioning methods. MCIA provides certification, quality assurance, and other services for seed producers and conditioners and can provide assistance to those interested in getting started in organic seed production. Contact MCIA for information on seed production practices and requirements. MCIA’s website, [www.mncia.org](http://www.mncia.org), contains information on MCIA programs and services available to seed producers.

Those wishing to offer organic seed for sale must understand and meet federal and state seed law labeling and other requirements pertaining to seed in addition to the organic requirements. For information about selling seed in Minnesota, please refer to the following Minnesota Department of Agriculture web page: <https://www.mda.state.mn.us/plants-insects/buying-and-selling-seed-minnesota>.

**Improving Profitability for Soybean Growers.**

Minnesota's soybean farmers invest check-off dollars in research to help producers better manage pests (disease, weed and insects), enhance environmental stewardship, optimize soybean quality and increase soybean yield. By supporting innovative research, the MSR&PC is doing its part to maintain, and increase, producer profitability. Want to learn more? Visit us at [mnsoybean.org](http://mnsoybean.org)

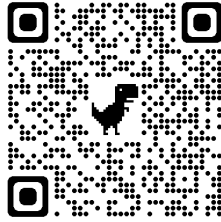

*Brought to you by the wise investment of checkoff dollars.*
